Recent developments in the SuperNova dual source micro-focus diffractometer.

Zoltán Gal,1 Fraser White,1 Alexandra Griffinn,1 Oliver Presly,1 Amber Thompson,1 Chris Frampton,1 Agilent Technologies XRD (formerly Oxford Diffraction Ltd.),1 (UK).2 University of Oxford, (UK).2 SAFC Pharma (formerly Pharmorphix Ltd.). E-mail: zoltan.gal@agilent.com

The introduction of the SuperNova in late 2008 being the first dual wavelength micro-focus diffractometer gave a tremendous boost to the capabilities and throughput for in-house crystallographic research. The combination of the high intensity Cu and Mo micro-focus sources (50W) co-mounted along with a 135mm Atlas CCD detector allows for true flexibility on a per-experiment basis.

Continued research and development in core technologies used in the SuperNova means that key aspects of the instrument have been updated and improved since its initial launch. Here we would like to highlight the overall benefits of these evolutionary changes and refinements in both hardware and software by presenting a number of absolute configuration determination studies. The examples presented include a broad spectrum of materials with greatly varying anomalous signal, including the first, purely hydrocarbon based molecule’s experimental chirality determination using Bayesian methods.

Keywords: absolute configuration determination

A three-dimensional framework structure of vanadium and 1,2,4,5-benzenetetracarboxylate

Orrasa In-noua,1,2 Gary S. Nichol,2 Dennis L. Lichtenberger,2 John H. Enemark,2 Kenneth J. Haller,2 School of Chemistry, Suranaree University of Technology, Nakhom Ratchasima 30000 (Thailand).3 Department of Chemistry and Biochemistry, University of Arizona, Tucson, AZ 85721 (USA). E-mail: orrassa_04@hotmail.com

Blue block crystals were obtained from the hydrothermal synthesis in aqueous solution of vanadium pentoxide, titanium tetraisopropoxide and 1,2,4,5-benzenetetracarboxylic acid in the molar ratio 1:2:2 at 150°C for 4 days, and structurally analyzed by single crystal X-ray diffraction. The interest in solving this structure to the capabilities and throughput for in-house crystallographic research. The combination of the high intensity Cu and Mo micro-focus sources (50W) co-mounted along with a 135mm Atlas CCD detector allows for true flexibility on a per-experiment basis.

Synthesis and structural characterization of two new isoindol derivatives

Gül Yakalı,1 Duygu Barut,1 García Granada Santiagó,1 Orhan Büyükgöngür,1 Nüket Öcal,1 Melek Gökçe,2 Muhittin Aygün,1 Dokuz Eylül University, Faculty of Science, Department of Physics, 35160 Buca – İzmir (Turkey).2 Oviedo Asturias University, Department of Physics, 33006 Oviedo (Spain).1 Onodak Mayis University, Faculty of Arts & Science, Department of Physics, 5519 Kurselpit - Samsun (Turkey).2 İdiz Tech University Technical, Faculty of Art and Sciences, Department of Chemistry, Davutpasça Campus, 34210 Esenler/Istanbul, (Turkey). E-mail: guyl_zokan13@hotmail.com

Isoindol derivatives are versatile intermediates for the synthesis of a variety of bioactive compounds, and possess a broad spectrum of biological activity such as insecticidal, antibacterial, antibiotic, antitumor, antifungal, psychotherapeutic, antihippertensive, HIV and other activities. In this study, two new derivatives of Isoindol, N-(1,3-dioxo-1,3,3a,4,7,7a-hexahydro-2H-4,7-methanoisoindol-2-yl)-2,2-dimethylpropanamide and 4,8-Methano-1-(2,5-dimethoxyphenyl)-6-(methylaminio)4a,8-exo-tetrahydro-endo-dione, have been synthesized and characterized by elemental analysis, FT-IR, UV-Vis and 1H NMR spectroscopy.

The crystal structure of this compounds has been determined by single crystal diffraction method. The first compound (C754), which is an oxalamide derivative, crystallized in the orthorhombic system with space group Pca21, a= 24.038 (2) Å, b= 9.3387 (7) Å, c= 12.3004 (9) Å, Z = 8. The final R value is 0.0066 for 5227 measured reflections. The compound has two molecules in the asymmetric unit, is a chiral compound with 8 stereogenic center. This compound occurs non-centrosymmetric dimeric structure with space group C221. a= 24.038 (2) Å, b= 9.3387 (7) Å, c= 12.3004 (9) Å, Z = 8. The final R value is 0.0036 for 3404 reflections. The molecule adopts Z-configuration. The structure is a chiral compound with 8 stereogenic center. Molecule occurs the fusion of the isoxazoline ring and dicarboximide onto norbornane unit. The crystal structure is stabilized by intermolecular N – H…O type hydrogen bonds link the molecules to form an infinite one dimensional polymeric chain along b-axis. Crystallographic results are consistent with the literature [3], [4].
