

## **Driving Pharmaceutical Development with Small Molecule Crystallography: Not Just a Pretty Picture**

Andrew P. J. Brunskill

Merck Research Laboratories, Rahway NJ, USA

Small molecule crystallography is used extensively throughout the pharmaceutical development process. Apart from providing the most definitive confirmation of molecular structure, the information gained from crystal structures play many other roles. Examples of the how crystallographic information has driven the development process in areas such as API form selection, catalyst optimization and process optimization will be provided.
