Supplementary Figure 2. Structural comparison with Rabs. R.m.s.d. values for the superimposition of Rab GDP-form (a) and Rab GTP-form (b) structures. The values were calculated for the core domain excluding the switch I, switch II and interswitch elements, in Å, for both $P_6_{3}2_2$ and $C_2$ space groups. The values for the comparison with the $P_{2}_{1}2_{1}2_{1}$ structures are highly identical to those for the $C_2$ structure. The PDB accession numbers used for the alignment are indicated.
