Received 21 November 2007; accepted 10 December 2007

Key indicators: single-crystal X-ray study; $T = 293$ K; mean $\sigma(\text{C}-\text{C}) = 0.002$ Å; R factor = 0.051; wR factor = 0.116; data-to-parameter ratio = 15.3.

The title compound, $C_{18}H_{14}O_2$, crystallizes with one half-molecule in the asymmetric unit. The molecule lies on an inversion center, located at the mid-point of the central C–C bond. As a result, the benzene rings are coplanar. No classical hydrogen bonds or stacking interactions are observed in the crystal structure.

Related literature

The title molecule was obtained unintentionally during an attempt at the synthesis of a Co^{II} complex, carried out following a published work (Burchell *et al.*, 2006).

4,4'-Bis(prop-2-ynyloxy)biphenyl

Wu Zhang, Li Yao and Ruo-Jie Tao

S1. Comment

The title compound has been X-ray characterized (Fig. 1). The molecule lies on an inversion center, placed at the midpoint of the central C—C bond. As a result, all non-H atoms are almost coplanar, with a mean deviation from the least-squares plane of 0.0318 (13) Å. The bond lengths and angles show normal values. The crystal structure is characterized by zigzag chains (Fig. 2 and 3) formed along [100].

S2. Experimental

The title compound was obtained unintentionally as the product of an attempted synthesis of a network complex (Burchell *et al.*, 2006) based on Co^{II} and 4,4'-bis(prop-2-ynyloxy)biphenyl, by evaporation of a methyl alcohol and acetone solution of CoCl₂, NaN₃ and the title molecule, at 298 K.

S3. Refinement

All H atoms were included in calculated positions, with C—H distances fixed to 0.93 (aromatic CH) or 0.97 Å (methylene CH₂) and were refined in the riding-model approximation, with $U_{\text{iso}}(\text{H}) = 1.2U_{\text{eq}}(\text{carrier C})$.

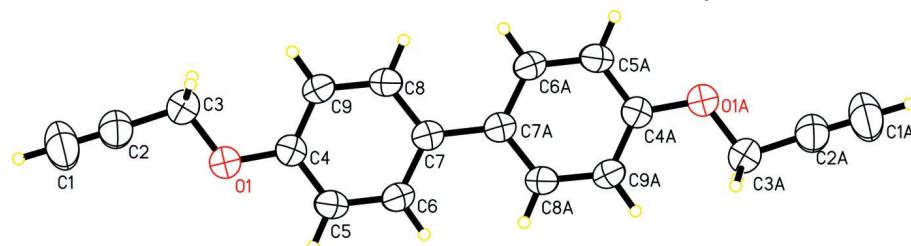

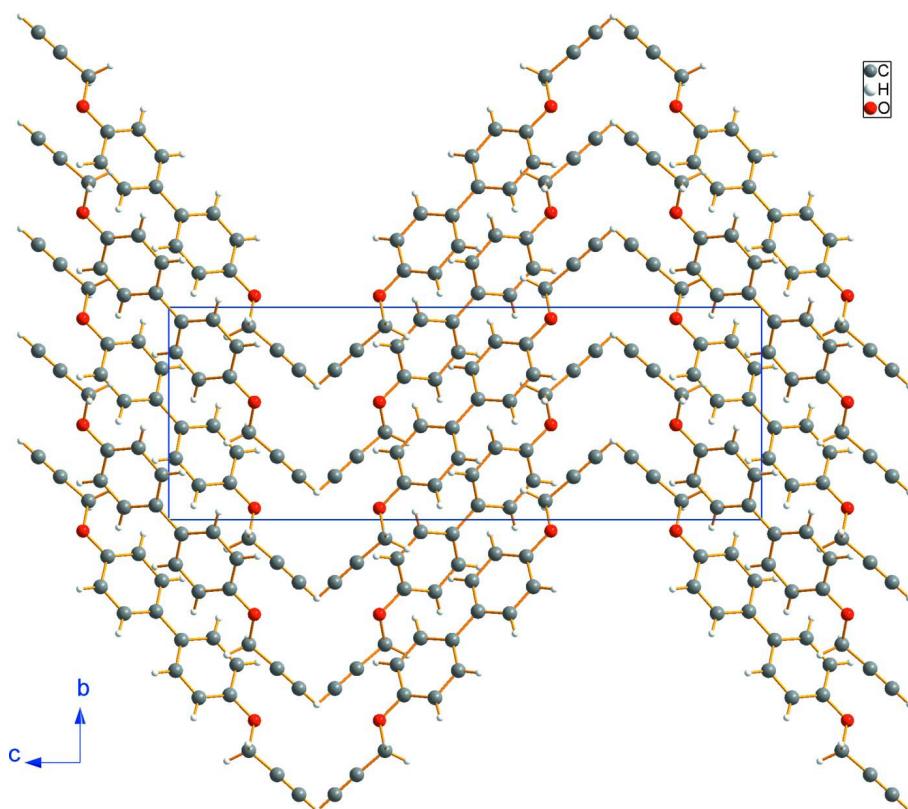

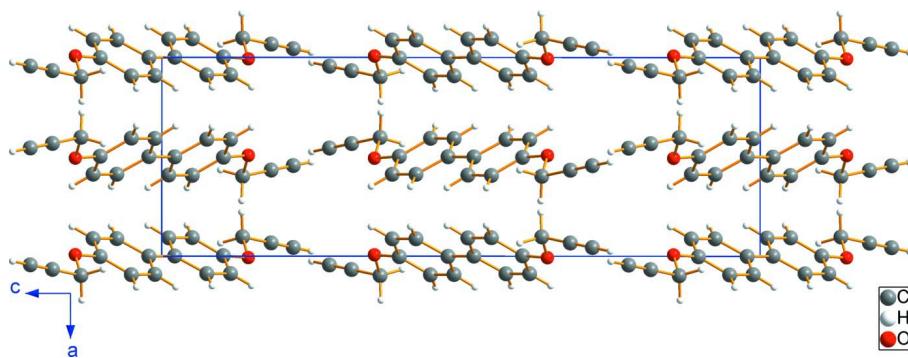

Figure 1

The molecular structure of the title molecule, showing the atom-labeling scheme. Displacement ellipsoids are drawn at the 50% probability level. 'A' labeled atoms are generated by symmetry code $-x, -y, -z$.
