Received 7 December 2007; accepted 17 January 2008

 Key indicators: single-crystal X-ray study; $T = 298$ K; mean $\sigma(\text{C}-\text{C}) = 0.006$ Å; R factor = 0.088; wR factor = 0.190; data-to-parameter ratio = 17.0.

The title compound, $\text{C}_{12}\text{H}_{16}\text{N}_2\text{O}$, is a diazepane intermediate that can be used as an inhibitor of human nitric oxide synthesis. In the molecule, the seven-membered ring has a chair-like conformation and the two rings are approximately perpendicular to one another, with a $\text{C}-\text{N}-\text{C}-\text{C}$ torsion angle of $77.8(4)^\circ$. Intermolecular $\text{N}-\text{H}\cdots\text{O}$ hydrogen bonds link the molecules into dimers around a centre of symmetry, with $\text{C}-\text{H}\cdots\text{O}$ interactions linking the dimers into infinite sheets.

1-Benzyl-1,4-diazepan-5-one

F. Sha, H. Xu, S. Liu, P. Wang and J. Wang

Comment

The title compound is a 1-substituted 1,4-diazepan-5-one; an important class of heterocyclic compounds that have widespread applications from pharmaceuticals (Włodarczyk *et al.*, 2006) to biology (Gopalakrishnan *et al.*, 2007). As part of our studies in this area, we report herein the synthesis and crystal structure of the title compound, (I).

In the molecule (Fig. 1) the 7-membered ring has a chair-like conformation with C1,C2,C3 and C4 forming the planar seat of the chair and N2 out of the plane on one side and N1—C5 out of the plane on the other side. The two rings are approximately perpendicular to one another with a C3—N2—C6—C7 torsion angle of 77.8 (4)°. Intermolecular N—H···O hydrogen bonds link the molecules into dimers around a center of symmetry with C—H···O interactions linking the dimers into infinite sheets (Fig. 2).

Experimental

1-Benzyl-piperidin-4-one (18.9 g,0.1 mol) was added into a stirred mixture of sulfuric acid (40 ml) and dichloromethane (80 ml) at 273 K. Then, at 273 K, sodium azide (32.5 g,0.5 mol) was cautiously added over a period of 3 h and the resulting mixture was stirred for 1 h with the temperature kept at approximately 278 K. Then ice (1 kg) was quickly added and the solution was alkalinized with ammonium hydroxide (15%,200 mL) to pH=11. The organic layer was separated with the water fraction extracted with dichloromethane (3x100mL). The organic extracts were combined,dried over NaSO₄, and concentrated *in vacuo*. The residue was recrystallized from EtOAc to give the title compound, (I) (yield: 13.0 g, 65%). Crystals of (I) suitable for X-ray analysis were obtained by slow evaporation of an ethanol solution.

Refinement

H atoms were positioned geometrically, with N—H = 0.86 Å (for NH) and 0.93 Å for aromatic carbons and 0.97 Å for all others, and constrained to ride on their parent atoms, with $U_{iso}(H) = xU_{eq}(C,N)$, where $x = 1.5$ for methyl H, and $x = 1.2$ for all other H atoms.

Figures

Fig. 1. The molecular structure of the title molecule, with the atom-numbering scheme. Displacement ellipsoids are drawn at the 30% probability level.

Fig. 2. A packing diagram for (I). Hydrogen bonds are shown as dashed lines.

Special details

Geometry. All e.s.d.'s (except the e.s.d. in the dihedral angle between two l.s. planes) are estimated using the full covariance matrix. The cell e.s.d.'s are taken into account individually in the estimation of e.s.d.'s in distances, angles and torsion angles; correlations between e.s.d.'s in cell parameters are only used when they are defined by crystal symmetry. An approximate (isotropic) treatment of cell e.s.d.'s is used for estimating e.s.d.'s involving l.s. planes.

Refinement. Refinement of F^2 against ALL reflections. The weighted R -factor wR and goodness of fit S are based on F^2 , conventional R -factors R are based on F , with F set to zero for negative F^2 . The threshold expression of $F^2 > 2\sigma(F^2)$ is used only for calculating R -factors(gt) *etc.* and is not relevant to the choice of reflections for refinement. R -factors based on F^2 are statistically about twice as large as those based on F , and R -factors based on ALL data will be even larger.
