## 3-Chloroquinuclidinium chloride

Isha Azizul, Arifin Zainudin and Seik Weng Ng*

Department of Chemistry, University of Malaya, 50603 Kuala Lumpur, Malaysia Correspondence e-mail: seikweng@um.edu.my

Received 27 February 2008; accepted 21 April 2008
Key indicators: single-crystal X-ray study; $T=100 \mathrm{~K}$; mean $\sigma(\mathrm{N}-\mathrm{C})=0.004 \AA$; disorder in main residue; $R$ factor $=0.040 ; w R$ factor $=0.113$; data-to-parameter ratio $=13.0$.

The cation of the title compound, $\mathrm{C}_{7} \mathrm{H}_{13} \mathrm{ClN}^{+} \cdot \mathrm{Cl}^{-}$, forms a linear hydrogen bond to the chloride anion. The cation is disordered about a mirror plane.

## Related literature

For isomeric 4-chloroquinuclidinium chloride, see: Kurahashi et al. (1980), which also reports the parent quinuclidinium chloride.

## 3-Chloroquinuclidinium chloride

## Isha Azizul, Arifin Zainudin and Seik Weng Ng

## S1. Comment

4-Chloroquinuclidinium chloride features an $\mathrm{N}-\mathrm{H} \cdots \mathrm{Cl}$ hydrogen bond between the cation and anion. The $\mathrm{N}-\mathrm{C}$ and $\mathrm{C}-\mathrm{C}$ bonds are somewhat shorter than those in the unsubstituted salt, and this has been attributed to the electron-withdrawing effect of the chlorine substituent (Kurahashi et al., 1980). The present isomeric compound (Scheme I) is expected to show this feature; however, owing to disorder, the effect cannot be unambiguously observed even at low temperature. The cation forms a linear hydrogen bond $[\mathrm{N}-\mathrm{H} \cdots \mathrm{Cl} 3.008(3) \AA]$ to the chloride; the cation is disordered about a mirror plane (Fig. 1).

## S2. Experimental

The commercially available compound was a crystalline. A large block was cut into a smaller specimen.

## S3. Refinement

The cation is disordered about a mirror plane in the carbon atoms except C 1 atom. The N 1 and C 1 atoms, which lie on this symmetry element, were refined with their normal half occupancies. The other carbon atoms were refined with half occupancies, subject to $\mathrm{N}-\mathrm{C}$ being restrained to $1.49 \pm 0.01 \AA$ and $\mathrm{C}-\mathrm{C}$ to $1.54 \pm 0.01 \AA$. Additionally, the 1,3-related distances were restrained from $2.43 \pm 0.01 \AA$, to $2.47 \pm 0.01 \AA$ as well as $2.52 \pm-0.01 \AA$. The anisotropic temperature factors of the disordered carbon were restrained to be nearly isotropic but the $\mathrm{N}-\mathrm{H}$ distance was restrained to $0.88 \pm 0.01 \AA$.
Carbon-bound H -atoms were placed in calculated positions ( $\mathrm{C}-\mathrm{H} 0.99$ to $1.00 \AA$ ) and were included in the refinement in the riding model approximation, with $U(\mathrm{H})$ set to $1.2 U(\mathrm{C})$. The ammonium H -atom was located in a difference Fourier map, and was refined with an $\mathrm{N}-\mathrm{H}$ distance restraint of $0.88 \pm 0.01 \AA$; its temperature factor was freely refined.

## Figure 1

Thermal ellipsoid plot of the two independent molecules of 2-chloroquinuclidinium chloride at the $70 \%$ probability level; hydrogen atoms are drawn as spheres of arbitrary radius. The dashed lines denote the hydrogen bond.
