Received 6 April 2008; accepted 14 April 2008

Key indicators: single-crystal X-ray study; $T = 296$ K; mean $\sigma(\text{C}-\text{C}) = 0.003$ Å;
disorder in main residue; R factor = 0.046; wR factor = 0.140; data-to-parameter
ratio = 16.5.

In the title compound, $\text{C}_{27}\text{H}_{39}\text{NO}_3\text{S}$, the configurations of the two chiral centers observed in the protonated cation are consistent with previous reports. In the crystal structure, weak intermolecular $\text{N}-\text{H}\cdots\text{O}$ hydrogen bonds link ions into chains which develop along the a axis. The isopropyl group and four CH groups of the attached benzene ring are disordered approximately equally over two positions.

S1. Comment

Dehydroabietylamine, a unique synthetic primary amine having a three fused rings structure, is obtained as part of a mixture of amines prepared by the hydrogenation of rosin acid nitrile.

The cation and anion are linked by N—H···O hydrogen bond (Table 1, Fig.1). The *R* and *S* absolute configuration observed at C4 and C10 has been determined by the refinement of the Flack parameter (Flack, 1983). These absolute configurations agree with previous reports(Rao *et al.*, 2006, Tao, 1993).

Further N—H···O hydrogen bonds between the amine group and the O atoms of the SO₃ group, link molecules into chains developing along the *a* axis (Table 1).

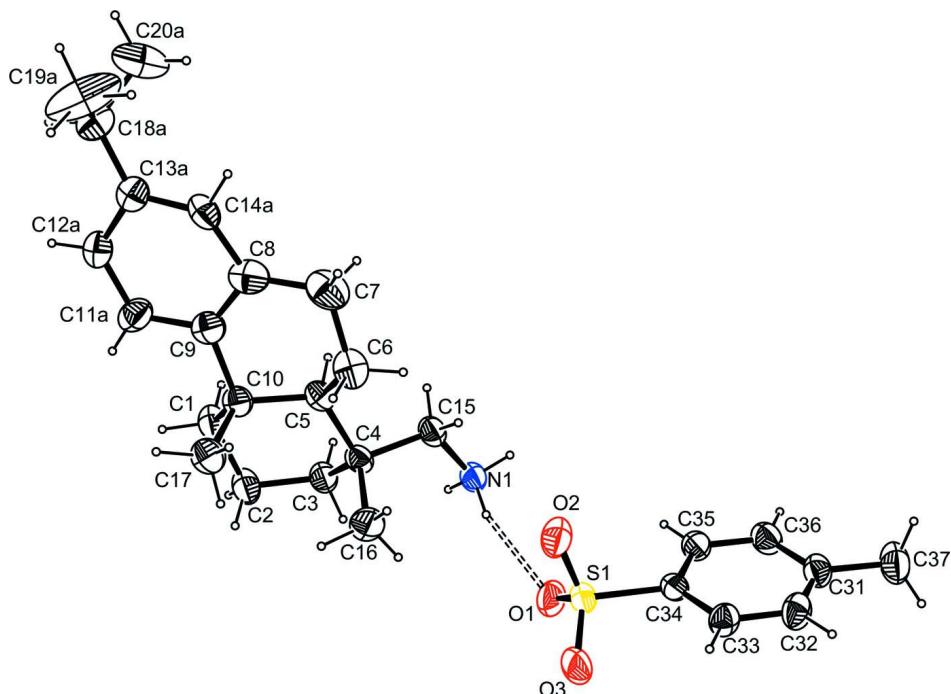

S2. Experimental

The title compound was synthesized according to the literature method(Gottstein & Cheney, 1965, Tao, 1993).

S3. Refinement

All H atoms attached to C atoms and N atom were fixed geometrically and treated as riding with C—H = 0.98 Å (methine), 0.97 Å(methylene), 0.96 Å(methyl) or 0.93 Å (aromatic) and N—H = 0.89 Å with U_{iso}(H) = 1.2U_{eq}(C) or U_{iso}(H) = 1.5U_{eq}(C_{methyl}, N).

The isopropyl group and part of the ring to which it is attached is disordered over two positions as indicated by very elongated thermal ellipsoids. This disorder was treated using the PART and SADI instruction available in SHELXL97 (Sheldrick, 2008). The ratio between the two disordered fragments has been initially obtained by refining the occupancy factor using the FVAR instruction with an overall isotropic thermal parameter. The ratio of the occupancy factor was found to be 0.53/0.47. Once correctly defined, the occupancy factors were fixed and a full refinement using restraints on C-C distances (SADI) and U_{ll} (SIMU, DELU) was carried out.

**Figure 1**

A view of the title compound with the atom-labelling scheme. Thermal ellipsoids are drawn at the 30% probability level. H atoms are represented as small spheres of arbitrary radii. Only one part of the disordered moiety is represented for clarity. H bond is shown as dashed line.

 Secondary atom site location: difference Fourier map

Hydrogen site location: inferred from neighbouring sites
 H-atom parameters constrained
 $w = 1/[\sigma^2(F_o^2) + (0.0817P)^2]$
 where $P = (F_o^2 + 2F_c^2)/3$
 $(\Delta/\sigma)_{\text{max}} = 0.001$
 $\Delta\rho_{\text{max}} = 0.22 \text{ e } \text{\AA}^{-3}$
 $\Delta\rho_{\text{min}} = -0.36 \text{ e } \text{\AA}^{-3}$
 Absolute structure: Flack (1983), 2489 Friedel pairs
 Absolute structure parameter: 0.03 (8)

Special details

Geometry. All esds (except the esd in the dihedral angle between two l.s. planes) are estimated using the full covariance matrix. The cell esds are taken into account individually in the estimation of esds in distances, angles and torsion angles; correlations between esds in cell parameters are only used when they are defined by crystal symmetry. An approximate (isotropic) treatment of cell esds is used for estimating esds involving l.s. planes.

Refinement. Refinement of F^2 against ALL reflections. The weighted R -factor wR and goodness of fit S are based on F^2 , conventional R -factors R are based on F , with F set to zero for negative F^2 . The threshold expression of $F^2 > \sigma(F^2)$ is used only for calculating R -factors(gt) etc. and is not relevant to the choice of reflections for refinement. R -factors based on F^2 are statistically about twice as large as those based on F , and R -factors based on ALL data will be even larger.
