Received 24 June 2008; accepted 24 June 2008

Key indicators: single-crystal X-ray study;  $T = 294\text{ K}$ ; mean  $\sigma(\text{C}-\text{C}) = 0.004\text{ \AA}$ ;  $R$  factor = 0.032;  $wR$  factor = 0.087; data-to-parameter ratio = 6.7.

The asymmetric unit of the title compound,  $\text{C}_{12}\text{H}_8\text{N}_2\text{O}_6\text{S}$ , an important diphenyl sulfone derivative, contains one half-molecule; a mirror plane passes through the  $\text{SO}_2$  group. The dihedral angle between the two symmetry-related benzene rings is  $40.10\text{ (13)}^\circ$ . An intramolecular  $\text{C}-\text{H}\cdots\text{O}$  hydrogen bond results in the formation of a five-membered ring, which adopts an envelope conformation.

## Bis(3-nitrophenyl) sulfone

**Wei Yao, Fang-Shi Li, Da-Sheng Yu, Mei-Juan Liu and Jin-Na Zhu**

### S1. Comment

The title compound, (I), is used for preparing 3,3'-diaminodiphenyl sulfone (Ayyangar *et al.*, 1981). As part of our studies in this area, we report herein the synthesis and crystal structure of (I).

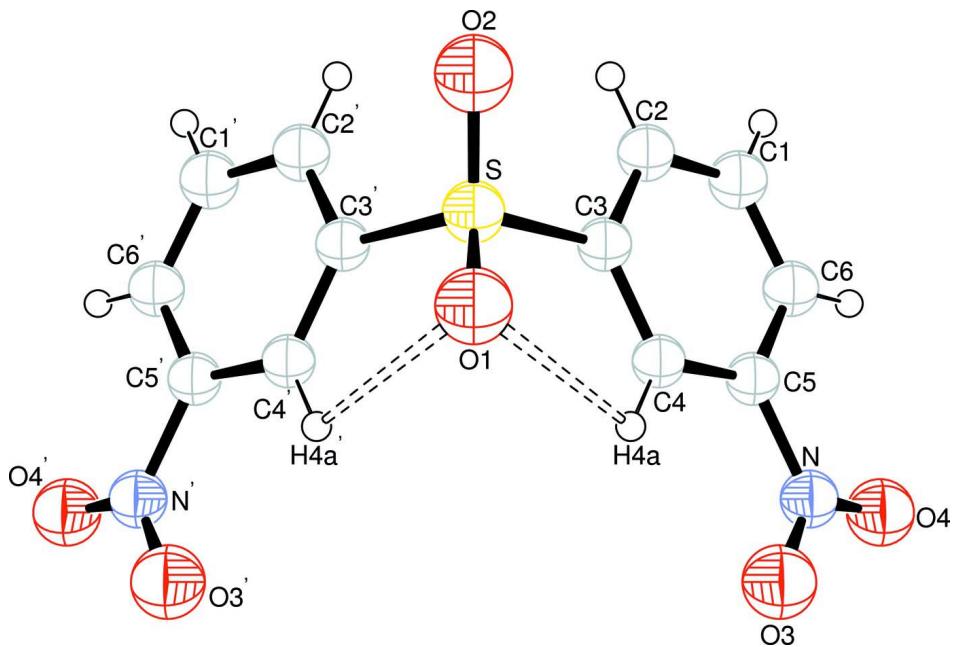

The asymmetric unit of (I) (Fig. 1) contains one half molecule. The bond lengths (Allen *et al.*, 1987) and angles are within normal ranges. The dihedral angle between the two symmetry related benzene rings is 139.90 (13)°. The intramolecular C-H···O hydrogen bond (Table 1) results in the formation of a five-membered non-planar ring: (S/O1/C3/C4/H4A), in which it adopts envelope conformation, with O1 atom displaced by -0.494 (3) Å from the planes of the other ring atoms.

### S2. Experimental

The title compound, (I), was prepared according to the literature method (Amer *et al.*, 1989). Crystals suitable for X-ray analysis were obtained by dissolving (I) (0.2 g) in dichloroethane (25 ml) and evaporating the solvent slowly at room temperature for about 7 d.

### S3. Refinement

H atoms were positioned geometrically, with C-H= 0.93 Å for aromatic H, and constrained to ride on their parent atoms, with  $U_{\text{iso}}(\text{H}) = 1.2U_{\text{eq}}(\text{C})$ .

**Figure 1**

The molecular structure of the title molecule, with the atom-numbering scheme [symmetry code: (')-x, y, z]. Hydrogen bonds are shown as dashed lines.

#### Crystal data

$C_{12}H_8N_2O_6S$

$M_r = 308.27$

Orthorhombic,  $Pmn2_1$

Hall symbol: P 2ac -2

$a = 20.260 (4)$  Å

$b = 5.9380 (12)$  Å

$c = 5.3770 (11)$  Å

$V = 646.9 (2)$  Å<sup>3</sup>

$Z = 2$

$F(000) = 316$

$D_x = 1.583 \text{ Mg m}^{-3}$

Mo  $K\alpha$  radiation,  $\lambda = 0.71073$  Å

Cell parameters from 25 reflections

$\theta = 10\text{--}13^\circ$

$\mu = 0.28 \text{ mm}^{-1}$

$T = 294$  K

Block, light yellow

$0.30 \times 0.20 \times 0.10$  mm

#### Data collection

Enraf–Nonius CAD-4  
diffractometer

Radiation source: fine-focus sealed tube

Graphite monochromator

$\omega/2\theta$  scans

Absorption correction:  $\psi$  scan  
(North *et al.*, 1968)

$T_{\min} = 0.920$ ,  $T_{\max} = 0.972$   
1304 measured reflections

674 independent reflections

624 reflections with  $I > 2\sigma(I)$

$R_{\text{int}} = 0.028$

$\theta_{\max} = 25.2^\circ$ ,  $\theta_{\min} = 2.0^\circ$

$h = -24 \rightarrow 24$

$k = -7 \rightarrow 0$

$l = 0 \rightarrow 6$

3 standard reflections every 120 min  
intensity decay: none

#### Refinement

Refinement on  $F^2$

Least-squares matrix: full

$R[F^2 > 2\sigma(F^2)] = 0.032$

$wR(F^2) = 0.086$

$S = 1.00$

674 reflections

101 parameters  
 Primary atom site location: structure-invariant direct methods  
 Secondary atom site location: difference Fourier map  
 Hydrogen site location: inferred from neighbouring sites  
 H-atom parameters constrained  
 $w = 1/[\sigma^2(F_o^2) + (0.06P)^2 + 0.078P]$   
 where  $P = (F_o^2 + 2F_c^2)/3$

$(\Delta/\sigma)_{\max} < 0.001$   
 $\Delta\rho_{\max} = 0.25 \text{ e } \text{\AA}^{-3}$   
 $\Delta\rho_{\min} = -0.22 \text{ e } \text{\AA}^{-3}$   
 Extinction correction: *SHELXL97* (Sheldrick, 2008),  $Fc^* = kFc[1 + 0.001xFc^2\lambda^3/\sin(2\theta)]^{-1/4}$   
 Extinction coefficient: 0.069 (8)  
 Absolute structure: Flack (1983), with no Friedel pairs  
 Absolute structure parameter: -0.11 (15)

#### Special details

**Geometry.** All e.s.d.'s (except the e.s.d. in the dihedral angle between two l.s. planes) are estimated using the full covariance matrix. The cell e.s.d.'s are taken into account individually in the estimation of e.s.d.'s in distances, angles and torsion angles; correlations between e.s.d.'s in cell parameters are only used when they are defined by crystal symmetry. An approximate (isotropic) treatment of cell e.s.d.'s is used for estimating e.s.d.'s involving l.s. planes.

**Refinement.** Refinement of  $F^2$  against ALL reflections. The weighted R-factor  $wR$  and goodness of fit S are based on  $F^2$ , conventional R-factors R are based on F, with F set to zero for negative  $F^2$ . The threshold expression of  $F^2 > 2\text{sigma}(F^2)$  is used only for calculating R-factors(gt) etc. and is not relevant to the choice of reflections for refinement. R-factors based on  $F^2$  are statistically about twice as large as those based on F, and R-factors based on ALL data will be even larger.
