# Dichlorido[2,2'-(oxydimethylene)-dipyridine]copper(II)

Jin Min Li

Chemistry and Chemical Engineering College, Shanxi Datong University, Datong 037009, People's Republic of China

Correspondence e-mail: jinminli1957@yahoo.com.cn

Received 11 October 2008; accepted 23 October 2008

 Key indicators: single-crystal X-ray study;  $T = 298$  K; mean  $\sigma(\text{C}-\text{C}) = 0.004$  Å;  $R$  factor = 0.024;  $wR$  factor = 0.066; data-to-parameter ratio = 14.3.

In the title complex,  $[\text{CuCl}_2(\text{C}_{12}\text{H}_{12}\text{N}_2\text{O})]$ , the  $\text{Cu}^{\text{II}}$  ion is coordinated in a distorted trigonal-bipyramidal environment. In the crystal structure, there is a weak  $\pi$ - $\pi$  stacking interaction between symmetry-related pyridine rings, with a centroid-to-centroid distance of 3.8134 (17) Å. In addition, there is relatively close contact between the pyridine ring  $\pi$ -system and a symmetry-related  $\text{Cu}^{\text{II}}$  ion ( $\text{Cu} \cdots \text{centroid}$  distance of 3.868 Å).

## Related literature

For the isotopic Cd and Zn analogs of the title compound, see: Li (2007) and Li (2008), respectively.

## Dichlorido[2,2'-(oxydimethylene)dipyridine]copper(II)

J. M. Li

### Comment

2,2'-[oxydi(methylene)]dipyridine is an useful tridentate terminal ligand and the Cd<sup>II</sup> complex with it as ligand has already been published (Li, 2007). Herein the crystal structure of the title complex, (I), is reported.

The molecular structure of (I) is shown in Fig. 1. The atom Cu1 is coordinated in a distorted trigonal-bipyramidal environment (Table 1). In the crystal structure, there is a weak  $\pi$ - $\pi$  stacking interaction between symmetry related pyridyl rings, with the relevant distances being  $Cg1 \cdots Cg1^i = 3.8134$  (17) Å and a perpendicular distance of 3.556 Å [symmetry code (i)  $-x, 2 - y, -z$ ; Cg1 is the centroid of the N1/C2—C6 ring]. In addition, there is close contact between a  $\pi$ -ring system and symmetry related Cu atom, with the relative distances being:  $Cg2 \cdots Cu1^{ii} = 3.868$  Å,  $Cg2_{\text{perp}} \cdots Cu1^{ii} = 3.635$  Å [symmetry code: (ii)  $-x, 1 - y, -z$ ; Cg2 is the centroid of the N2/C8—C12 ring;  $Cg2_{\text{perp}} \cdots Cu1^{ii}$  is the perpendicular distance from Cu1<sup>ii</sup> to N2/C8—C12 ring]. The title compound is isostructural with the Cadmium analog (Li, 2007) although the Cd analog was solved and refined in the non-standard  $P2_1/n$  setting of space group  $P2_1/c$ .

### Experimental

6 ml methanol solution of 2,2'-[oxydi(methylene)]dipyridine (0.0418 g, 0.209 mmol) was added into 8 ml H<sub>2</sub>O solution containing CuCl<sub>2</sub>·2H<sub>2</sub>O (0.0362 g, 0.212 mmol), and the mixed solution was stirred for a few minutes. The green single crystals were obtained after the solution had been allowed to stand at room temperature for two weeks.

### Refinement

All H atoms were placed in calculated positions and refined as riding, C—H = 0.93–0.97 Å, with  $U_{\text{iso}}(\text{H}) = 1.2U_{\text{eq}}(\text{C})$ .

Extinction correction: none

## Special details

**Geometry.** All e.s.d.'s (except the e.s.d. in the dihedral angle between two l.s. planes) are estimated using the full covariance matrix. The cell e.s.d.'s are taken into account individually in the estimation of e.s.d.'s in distances, angles and torsion angles; correlations between e.s.d.'s in cell parameters are only used when they are defined by crystal symmetry. An approximate (isotropic) treatment of cell e.s.d.'s is used for estimating e.s.d.'s involving l.s. planes.

**Refinement.** Refinement of  $F^2$  against ALL reflections. The weighted  $R$ -factor  $wR$  and goodness of fit  $S$  are based on  $F^2$ , conventional  $R$ -factors  $R$  are based on  $F$ , with  $F$  set to zero for negative  $F^2$ . The threshold expression of  $F^2 > \sigma(F^2)$  is used only for calculating  $R$ -

factors(gt) etc. and is not relevant to the choice of reflections for refinement.  $R$ -factors based on  $F^2$  are statistically about twice as large as those based on  $F$ , and  $R$ - factors based on ALL data will be even larger.
