Poly[(3,5-dinitrobenzoato)- μ_3 -triazolato-cobalt(II)]

Xu-Liang Qi

Liaocheng Vocational and Technical College, Liaocheng, Shandong, People's Republic of China

Correspondence e-mail: q200801@sina.com

Received 30 November 2008; accepted 8 December 2008

 Key indicators: single-crystal X-ray study; $T = 296$ K; mean $\sigma(\text{C}-\text{C}) = 0.003$ Å; R factor = 0.026; wR factor = 0.060; data-to-parameter ratio = 13.7.

The title compound, $[\text{Co}(\text{C}_2\text{H}_2\text{N}_3)(\text{C}_7\text{H}_3\text{N}_2\text{O}_6)]_n$, was obtained by the reaction of CoCl_2 , triazole and 3,5-dinitrobenzoic acid in a 1:1:1 ratio. The Co centre is in a distorted tetrahedral coordination by three N atoms of three different triazole ligands and one O atom of the 3,5-dinitrobenzoate anion.

Poly[(3,5-dinitrobenzoato)- μ_3 -triazolato-cobalt(II)]

X.-L. Qi

Comment

The asymmetric unit of the title compound is shown in Fig. 1. Co is four-coordinated by one O atom of a 3,5-dinitrobenzoic acid anion and three triazole N atoms in a tetrahedral geometry. The Co—O/N bond lengths of 1.9510 (13)–2.0396 (16) Å are in the normal range. The triazole and 3,5-dinitrobenzoic acid ligands adopt tridentate and monodentate coordinating modes, respectively. As shown in Figs. 2a and 2b, cobalt ions are connected by triazole ligands to generate a two-dimensional net with the 3,5-dinitrobenzoic acid ligands stacking out of this net. There is not obvious supramolecular interaction between the two-dimensional nets.

Experimental

CoCl₂ (1.0 mmol), 3,5-dinitrobenzoic acid (1 mmol), and triazole (1 mmol) were dissolved in water (10 ml). The solution was heated in a 25 ml Teflon lined reaction vessel at 433 K for *ca* 3 days and then cooled to room temperature. Purple crystals were obtained in a yield of 85%.

Refinement

All H atoms were positioned geometrically and refined using a riding model with C—H = 0.93–0.96 Å and with $U_{\text{iso}}(\text{H}) = 1.2U_{\text{eq}}(\text{C})$.

Figures

Fig. 1. An *ORTEP* view of the asymmetric unit with 50% displacement ellipsoids for non-H atoms. Symmetry codes: (A) $-x, y - 1/2, -z + 1/2$; (B) $x, -y + 1/2, z + 1/2$.
