Received 3 December 2008; accepted 10 December 2008

Key indicators: single-crystal X-ray study;  $T = 295\text{ K}$ ; mean  $\sigma(\text{C}-\text{C}) = 0.003\text{ \AA}$ ;  $R$  factor = 0.053;  $wR$  factor = 0.187; data-to-parameter ratio = 19.7.

The title molecule,  $\text{C}_{14}\text{H}_9\text{NO}_2$ , is nearly planar with a dihedral angle of  $3.72(4)^\circ$  between the plane of the phenyl ring and the 3,1-benzoxazin-4-one fragment. The molecules are arranged into stacks parallel to the  $b$  axis via  $\pi-\pi$  stacking interactions [centroid-centroid distance =  $4.2789(11)\text{ \AA}$ ] and the crystal packing is additionally stabilized by weak intermolecular C–H···O interactions.

## 2-Phenyl-4*H*-3,1-benzoxazin-4-one

**R. Thilagavathy, Helen P. Kavitha, R. Arulmozhi, Jasmine P. Vennila and V. Manivannan**

### S1. Comment

Oxazin-4-one derivatives are used as inhibitors of the alpha/beta hydrolases, cholesterol esterase and acetylcholinesterase (Pietsch & Güttschow, 2005) and are potent inhibitors of the endocannabinoid-deactivating enzyme, monoacylglycerol lipase (Tarzia *et al.*, 2007).

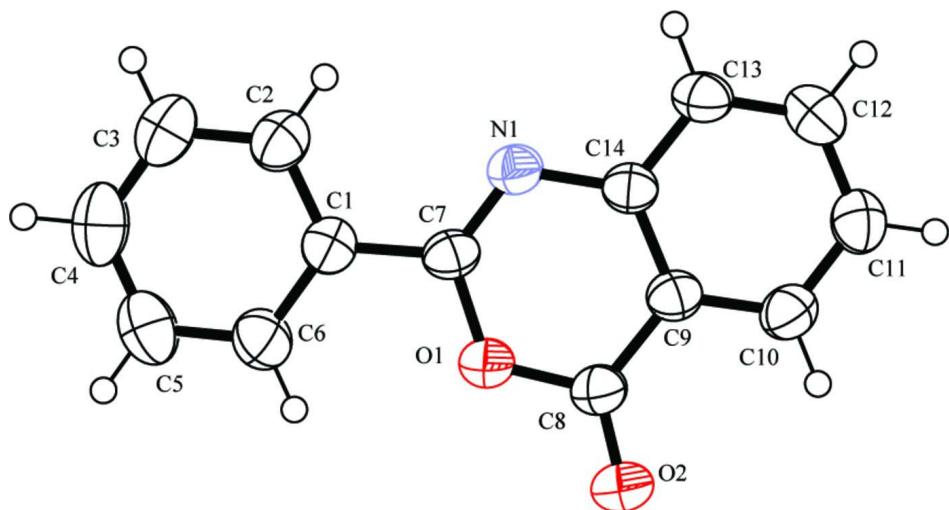

The geometric parameters of the title molecule (Fig. 1) agree well with the earlier reported structures (Crane & Rogerson, 2004; Khan *et al.*, 2007). The plane of the phenyl ring forms a dihedral angle of 3.72 (4) $^{\circ}$  with the benzo[*d*] [1,3]oxazin-4-one moiety. The molecular structure is stabilized by weak intramolecular C—H···O interaction and the crystal packing is stabilized by weak intermolecular C—H···O and  $\pi$ — $\pi$  stacking interactions.

### S2. Experimental

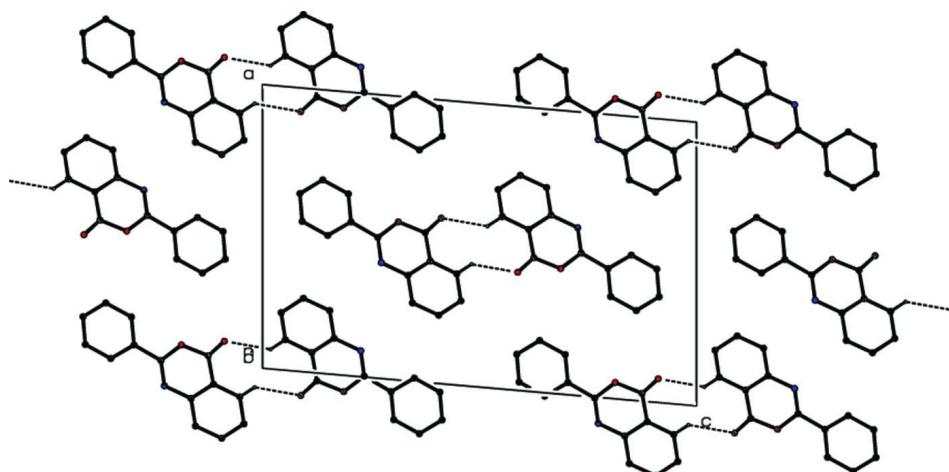

To a stirred solution of anthranilic acid (0.01 mol) in pyridine (60 ml), benzoyl chloride (0.01 mol) was added dropwise maintaining the temperature near 8 $^{\circ}$  C for one hour. The reaction mixture was stirred for another 2 h at room temperature. While stirring, a solid product separated out. The whole reaction mixture was neutralized with NaHCO<sub>3</sub> solution. A pale yellow solid deposited was filtered, washed with water and recrystallized from ethanol to get diffraction quality crystals; yield 78%.

### S3. Refinement

H atoms were positioned geometrically and refined using riding model with C—H = 0.93 Å and  $U_{\text{iso}}(\text{H}) = 1.2U_{\text{eq}}(\text{C})$ .

**Figure 1**

The molecular structure of the title compound, with atom labels and 50% probability displacement ellipsoids for non-H atoms.

**Figure 2**

The crystal packing viewed down the *b* axis. C-H...O hydrogen bonds are shown as dashed lines.
