Received 21 October 2008; accepted 15 December 2008

Key indicators: single-crystal X-ray study; $T = 296$ K; mean $\sigma(\text{C}-\text{C}) = 0.008$ Å; R factor = 0.025; wR factor = 0.063; data-to-parameter ratio = 11.7.

In the crystal structure of the title complex, $[\text{Tb}(\text{C}_6\text{H}_4\text{NO}_2)(\text{C}_2\text{O}_4)(\text{H}_2\text{O})_2]_n$, the Tb^{III} ion is coordinated by two O atoms from two isonicotinate (inic) anions, four O atoms of two oxalate anions, and two water molecules, displaying a distorted square-antiprismatic geometry. The Tb^{III} ion, the inic anion and the water molecules occupy general positions. One of the two crystallographically independent oxalate anions is located on a center of inversion, whereas the second is located on the twofold rotation axis. The carboxylate groups of the inic and oxalate anions link the terbium metal centres into layers. These layers are connected by $\text{O}-\text{H}\cdots\text{O}$ and $\text{N}-\text{H}\cdots\text{O}$ hydrogen bonding into a three-dimensional network.

Comment

The design, synthesis, characterization and properties of coordination networks formed by functionalized organic molecules or anions as bridges between metal centers are of great interest (Rizk *et al.*, 2005; Eddaoudi *et al.*, 2001). As a building block, isonicotinic acid and oxalic acid are excellent candidates for the construction of such compounds. In our ongoing investigations in this field the title compound was prepared and structurally characterized.

In the crystal structure of the title compound each Tb^{III} centre is coordinated by six oxygen atoms from two symmetry related inic anions, two crystallographically independent oxalate anions and two crystallographically independent water molecules within a distorted bicapped trigonal prismatic geometry (Fig. 1). The Tb^{III} ions are linked by the inic and oxalate anions into layers, which are parallel to the b-c-plane (Fig. 2). Tb...Tb separations amount to 6.177 (4) and 5.047 (5) Å, respectively. These layers are connected via O—H...O and N—H...O hydrogen bonding between the water H atoms and the inic and one of the two crystallographically independent oxalate anions into three-dimensional network (Table 1).

Experimental

A mixture of Tb₄O₇ (0.189 g; 0.25 mmol), isonicotinic acid (0.135 g; 1.5 mmol), oxalic acid (0.135 g; 1.5 mmol), water (10 mL) and HNO₃ (0.385 mmol; 0.92 g/ml) were stirred for 20 min and then sealed in a 20 mL Teflon-lined stainless-steel autoclave. The autoclave was heated to 433 K for 3 days, and then cooled to room temperature at 5 K h⁻¹. By this procedure colorless block-like crystals of the title compound were obtained.

Refinement

The Water H atoms were located in difference Fourier maps, their bond lengths were set to ideal values of O—H = 0.84 and finally they were refined isotropic using a riding model with $U_{\text{iso}}(\text{H}) = 1.5 U_{\text{eq}}(\text{O})$. C—H atoms were placed at calculated positions and were treated as riding on the parent C atoms with C—H = 0.93 Å, and with $U_{\text{iso}}(\text{H}) = 1.2 U_{\text{eq}}(\text{C})$.

Special details

Geometry. All esds (except the esd in the dihedral angle between two l.s. planes) are estimated using the full covariance matrix. The cell esds are taken into account individually in the estimation of esds in distances, angles and torsion angles; correlations between esds in cell parameters are only used when they are defined by crystal symmetry. An approximate (isotropic) treatment of cell esds is used for estimating esds involving l.s. planes.

Refinement. Refinement of F^2 against ALL reflections. The weighted R-factor wR and goodness of fit S are based on F^2 , conventional R-factors R are based on F, with F set to zero for negative F^2 . The threshold expression of $F^2 > 2\sigma(F^2)$ is used only for calculating R-factors(gt) etc. and is not relevant to the choice of reflections for refinement. R-factors based on F^2 are statistically about twice as large as those based on F, and R- factors based on ALL data will be even larger.
