Received 9 December 2008; accepted 8 January 2009

 Key indicators: single-crystal X-ray study; $T = 298$ K; mean $\sigma(\text{C}-\text{C}) = 0.005$ Å; R factor = 0.062; wR factor = 0.168; data-to-parameter ratio = 14.2.

In the title compound, $\text{C}_{16}\text{H}_{20}\text{O}_5$, the dihedral angle between the planar rings, *viz.* benzene and cyclopropane, is $52.1(2)^\circ$. Molecules are connected in the crystal *via* weak intermolecular $\text{C}-\text{H}\cdots\text{O}$ hydrogen bonds, forming chains in the [001] direction.

Related literature

For details of the synthesis, see: Chen (2008).

Ethyl 1-[(4-acetyl-2-methoxyphenoxy)methyl]cyclopropane-1-carboxylate

T. Tang, L. Gao, H.-S. Jia, Y.-M. Wu and H.-F. Ma

Comment

The title compound, (I), is one of the most important intermediates in the synthesis of 7-[(1-aminocyclopropyl)methoxy]-*N*-(1*H*-indol-5-yl)-6-methoxyquinolin-4-amine, which has advantageous pharmacological properties and inhibits the activity of protein tyrosine kinases (Chen, 2008). We report here the crystal structure of (I).

All bond lengths and angles are within expected ranges. Both benzene and cyclopropane rings are planar, and make a dihedral angle of 52.1 (2)° (rings C3···C8 and C11···C13). Molecules are linked together *via* intermolecular C—H···O hydrogen bonds, which may be effective to the stabilization of the crystal structure.

Experimental

The title compound was synthesized using a method similar to that reported recently (Chen, 2008). The crystals were obtained by evaporating the acetone slowly at room temperature for about 14 d.

Refinement

H atoms were positioned geometrically, with C—H = 0.93 (aromatic), 0.96 (methyl) or 0.97 Å (methylene), and constrained to ride on their parent atoms, with $U_{\text{iso}}(\text{H}) = xU_{\text{eq}}(\text{carrier C})$, where $x = 1.5$ for methyl groups and $x = 1.2$ otherwise. Methyl groups were allowed to rotate about their C—C bonds.

Figures

Fig. 1. A drawing of the molecular structure of (I), with the atom-numbering scheme. Displacement ellipsoids are drawn at the 40% probability level. Intramolecular C—H···O hydrogen bond is shown as a dashed line.

Fig. 2. A packing diagram for (I). C—H···O hydrogen bonds are shown as dashed lines.
