Received 18 February 2009; accepted 19 February 2009

Key indicators: single-crystal X-ray study;  $T = 173\text{ K}$ ; mean  $\sigma(\text{C}-\text{C}) = 0.004\text{ \AA}$ ;  $R$  factor = 0.036;  $wR$  factor = 0.105; data-to-parameter ratio = 12.0.

The Ni atom in the title compound,  $[\text{Ni}(\text{C}_8\text{H}_8\text{NO}_3)_2]$ , lies on a center of inversion in a square-planar coordination environment. The hydroxyl group of one anion forms a short hydrogen bond to the metal-coordinated O atom of the other anion.

### Related literature

For the structure of *o*-vanillin oxime, see: Xu *et al.* (2004). For the structure of bis(salicylaldoximato)nickel, see: Srivastava *et al.* (1967). The title compound is expected to form complexes with nitrogen-donor ligands as bis(salicylaldoxinato)nickel forms such adducts; see, for example, Hultgren *et al.* (2001); Lalia-Kantouri *et al.* (1999); Ma *et al.* (2007a,b).

### Experimental

#### Crystal data

$[\text{Ni}(\text{C}_8\text{H}_8\text{NO}_3)_2]$	$V = 756.5 (1)\text{ \AA}^3$

## Bis(2-hydroxyiminomethyl-6-methoxyphenolato- $\kappa^2 O^1,N$ )nickel(II)

Bing-Wen Li, Ming-Hua Zeng and Seik Weng Ng

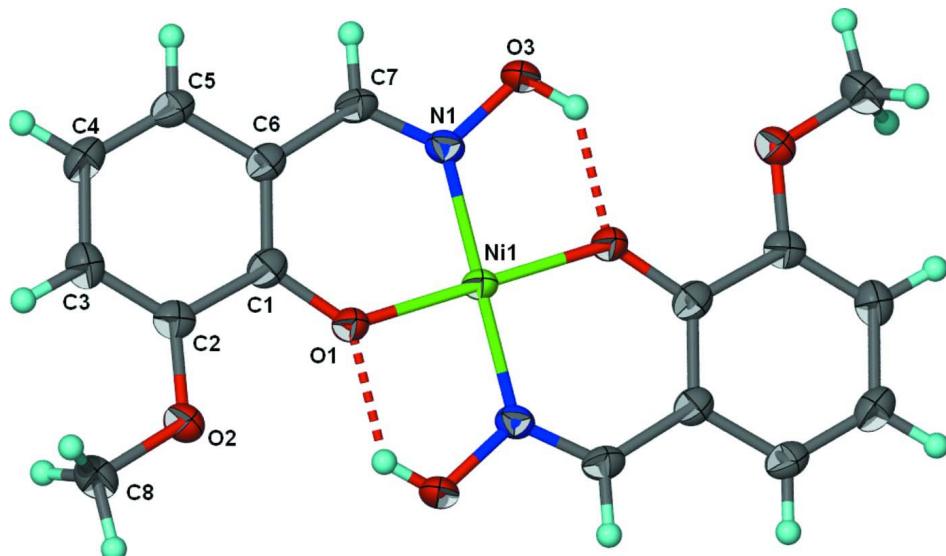

### S1. Experimental

Nickel perchlorate hexahydrate (0.36 g, 1 mmol), 3-methoxysalicylaldoxime (0.17 g, 1 mmol) and DMF (8 ml) were placed in a 15 ml Teflon-lined autoclave. The autoclave was heated at 353 K for 3 days. The autoclave was cooled over a period of 8 h at a rate of 10 K per hour. Green crystals were collected by filtration, washed with methanol, and dried in air; yield 30% based on Ni.

### S2. Refinement

Carbon-bound H atoms were placed at calculated positions (C–H 0.95 to 0.98 Å) and were included in the refinement in the riding model approximation, with  $U(H)$  set to 1.2–1.5 times  $U_{\text{eq}}(\text{C})$ .

The crystal was originally measured in the triclinic setting; the raw data when processed for absorption effects in the correct monoclinic setting had somewhat fewer reflections.

**Figure 1**

Thermal ellipsoid plot (Barbour, 2001) of  $\text{Ni}(\text{C}_8\text{H}_8\text{NO}_3)_2$ . Displacement ellipsoids are drawn at the 70% probability level, and H atoms as spheres of arbitrary radius. The dashed lines denote hydrogen bonds.
