Received 5 March 2009; accepted 9 March 2009

Key indicators: single-crystal X-ray study;  $T = 123\text{ K}$ ; mean  $\sigma(\text{C}-\text{C}) = 0.003\text{ \AA}$ ;  $R$  factor = 0.043;  $wR$  factor = 0.122; data-to-parameter ratio = 15.5.

In the title molecule,  $\text{C}_{18}\text{H}_{12}\text{N}_2\text{OS}$ , the dihedral angle between the two fused-ring systems is  $7.2(1)^\circ$ . The hydroxy group forms an intramolecular hydrogen bond with the imino group.

### Related literature

## 2-(1,3-Benzothiazol-2-yliminomethyl)-2-naphthol

**Khadija O. Badahdaha, Abdullah Mohamed Asiri and Seik Weng Ng**

### S1. Comment

The molecular structure of the title compound is shown in Fig. 1.

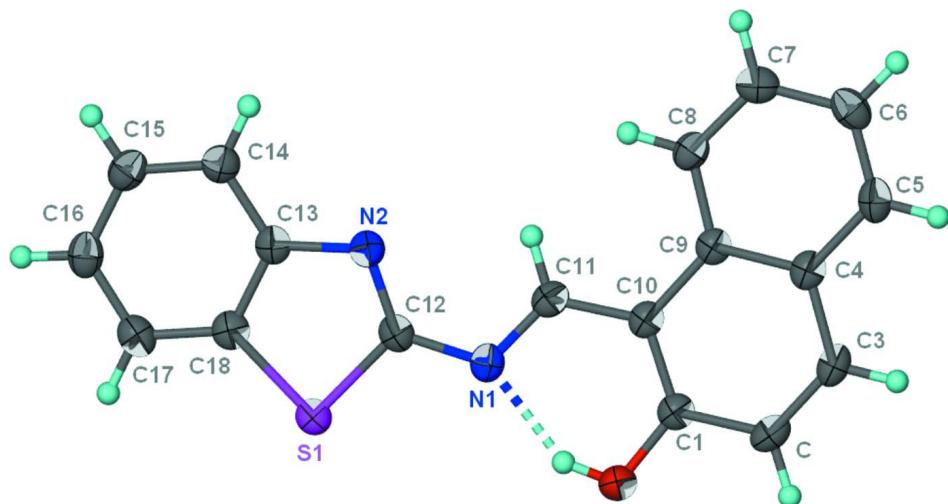

### S2. Experimental

2-Aminobenzothiazole (4.0 g, 26.6 mmol) dissolved in ethanol (25 ml) was added to 2-hydroxybenzaldehyde (4.58 g, 26.6 mmol) dissolved in ethanol (25 ml). The mixture was heated for another hour. The solid that separated from the reaction mixture was isolated and recrystallized from ethanol.

### S3. Refinement

Carbon-bound H-atoms were placed in calculated positions (C–H 0.95 Å) and were included in the refinement in the riding model approximation, with  $U(H)$  fixed at 1.2 $U(C)$ .

The hydroxy H-atom was located in a difference Fouier map, and was refined with a distance restraint of O–H  $0.84 \pm 0.01$  Å; its isotropic displacement parameter was refined.

**Figure 1**

Thermal ellipsoid plot (Barbour, 2001) of  $C_{18}H_{12}N_2OS$ ; probability levels are set at 70% and H-atoms are drawn as spheres of arbitrary radius. The dashed line denotes the hydrogen bond.

 $\Delta\rho_{\min} = -0.23 \text{ e } \text{\AA}^{-3}$

*Special details*

**Geometry.** All e.s.d.'s (except the e.s.d. in the dihedral angle between two l.s. planes) are estimated using the full covariance matrix. The cell e.s.d.'s are taken into account individually in the estimation of e.s.d.'s in distances, angles and torsion angles; correlations between e.s.d.'s in cell parameters are only used when they are defined by crystal symmetry. An approximate (isotropic) treatment of cell e.s.d.'s is used for estimating e.s.d.'s involving l.s. planes.
