Key indicators: single-crystal X-ray study; $T = 113\text{ K}$; mean $\sigma(\text{C}-\text{C}) = 0.002\text{ \AA}$; R factor = 0.043; wR factor = 0.119; data-to-parameter ratio = 13.1.

There are two independent molecules in the asymmetric unit of the title compound, $C_{11}H_{14}N_2O$. The heterocyclic ring of the bicyclic system has a sofa conformation, with the C atom bearing the two methyl groups displaced by $0.541(7)\text{ \AA}$ from the rest of the atoms of the ring [planar to within $0.064(9)\text{ \AA}$]. Molecules are linked into centrosymmetric dimers via $\text{N}-\text{H}\cdots\text{O}$ hydrogen bonds.

2,2,7-Trimethyl-2,3-dihydroquinazolin-4(1*H*)-one

Ling Zhang, Daxin Shi, Yanqiu Fan, Dongfeng Qian and Jiarong Li

S1. Comment

Derivatives of dihydroquinazolin-4(3*H*)-one are valuable synthetic intermediates featuring common structural motif found in a variety of compounds with interesting medicinal and biological properties (Shi *et al.*, 2004; Jackson *et al.*, 2007).

In the molecule of the title compound (Fig. 1), the 1,3-diazacyclohexane moiety of the bicyclic system has a sofa conformation with the C8 atom displaced by 0.541 (7) Å from the rest of the atoms of the 1,3-diazacyclohexane ring (planar within 0.064 (9) Å). The dihedral angle between C8, C9, C10 plane and the plane (N1, N2, C8) is 89.8 (3)°.

Molecules in crystal are linked into centrosymmetric dimers *via* N2—H2···O2ⁱ bonds (N2—H2 0.901 (9) Å, H2···O2ⁱ 2.029 (10) Å, N2—H2···O2ⁱ 167.2 (16)°) and N4—H4···O1ⁱ bonds (N4—H4 0.897 (9) Å, H4···O1ⁱ 1.956 (10) Å, N4—H4···O1ⁱ 173.3 (18)°)(Fig. 2).

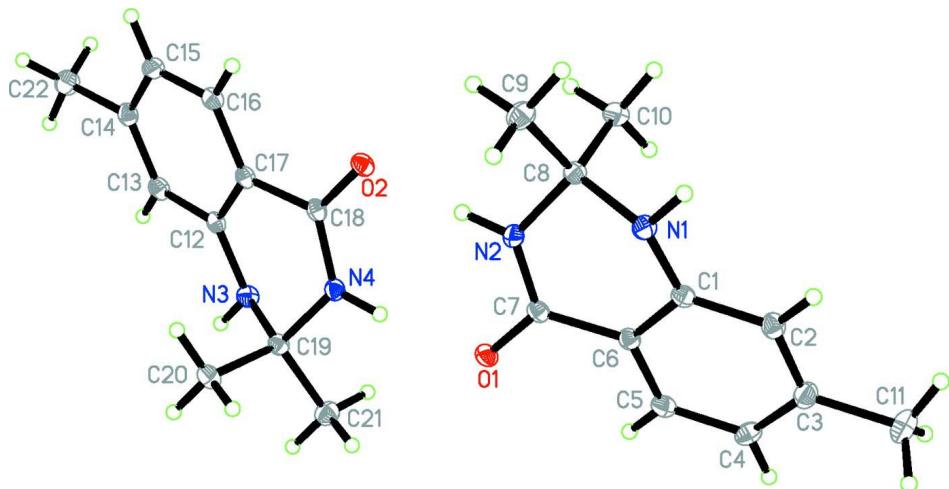

The molecular geometry and overall crystal structure of the title compound are quite similar to those observed in the structure of its close analog which lacks the methyl substituent in position 6 of the tetrahydroquinalazolinone system (Shi *et al.*, 2003).

S2. Experimental

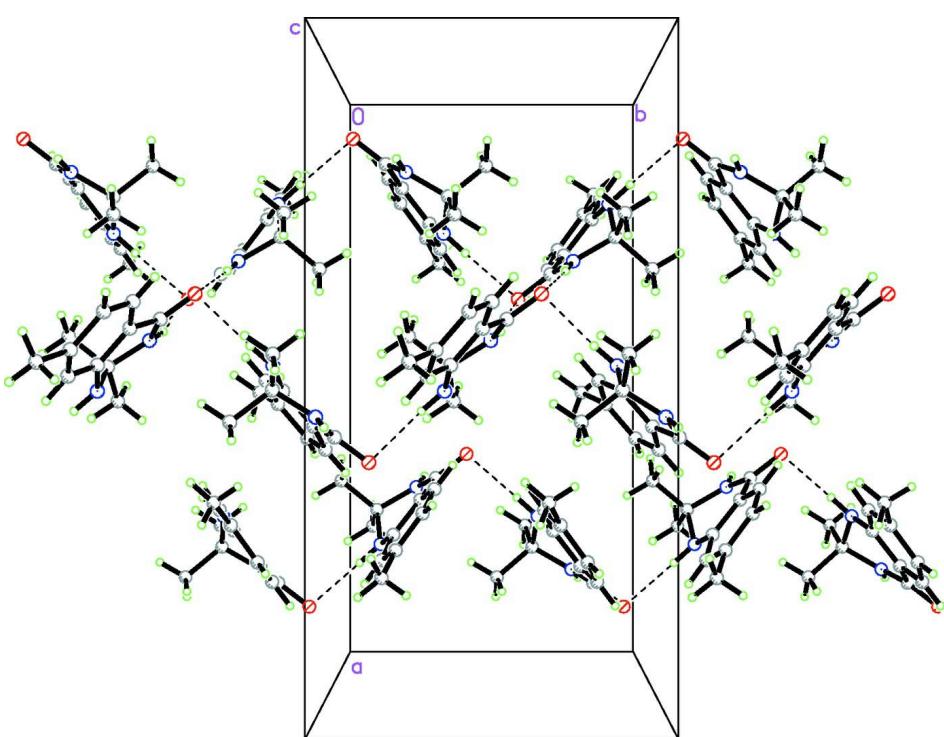

A solution of 2-amino-5-methylbenzonitrile (10 mmol) and sodium methylate (10 mmol) in acetone (10 ml), was refluxed for 2 h. The reaction mixture was cooled, to room temperature and poured into 20 ml of water (previously cooled to 20°); then it was extracted with ethyl acetate, distilled off ethyl acetate to give the title compound. The product was recrystallized from ethanol and ethyl acetate to give colorless crystalline powder. m.p. 539–540 K; IR (KBr): 3300 (N—H), 3036, 2972 (C—H), 1642 (C=O) cm⁻¹; ¹H-NMR (CDCl₃, p.p.m.): 1.54 (6H, s), 2.29 (3H, s) 5.89 (1H, s), 6.66 (1H, s), 7.26 (1H, d), 7.78 (1H, d), 8.19 (1H, br). 50 mg of the obtained product was dissolved in ethyl acetate (5 ml) and the solution was kept at room temperature for 4 d to give colorless single crystals.

S3. Refinement

C—H were included in the riding model approximation with C—H distances 0.95–0.99 Å, and with $U_{\text{iso}}(\text{H}) = 1.2U_{\text{eq}}(\text{C})$ or $1.5U_{\text{eq}}(\text{C})(\text{methyl})$. H atoms of NH group were located in difference Fourier maps with N—H distances 0.891–0.901 Å with $U_{\text{iso}}(\text{H}) = 1.2U_{\text{eq}}(\text{N})$.

 and constrained refinement
 $w = 1/[\sigma^2(F_o^2) + (0.0707P)^2 + 1.3149P]$
 where $P = (F_o^2 + 2F_c^2)/3$
 $(\Delta/\sigma)_{\max} = 0.001$
 $\Delta\rho_{\max} = 0.26 \text{ e \AA}^{-3}$
 $\Delta\rho_{\min} = -0.27 \text{ e \AA}^{-3}$

Special details

Geometry. All e.s.d.'s (except the e.s.d. in the dihedral angle between two l.s. planes) are estimated using the full covariance matrix. The cell e.s.d.'s are taken into account individually in the estimation of e.s.d.'s in distances, angles and torsion angles; correlations between e.s.d.'s in cell parameters are only used when they are defined by crystal symmetry. An approximate (isotropic) treatment of cell e.s.d.'s is used for estimating e.s.d.'s involving l.s. planes.

Refinement. Refinement of F^2 against ALL reflections. The weighted R -factor wR and goodness of fit S are based on F^2 , conventional R -factors R are based on F , with F set to zero for negative F^2 . The threshold expression of $F^2 > \sigma(F^2)$ is used only for calculating R -factors(gt) etc. and is not relevant to the choice of reflections for refinement. R -factors based on F^2 are statistically about twice as large as those based on F , and R -factors based on ALL data will be even larger.
