 Ethyl (*E*)-1-(2-styryl-1*H*-benzimidazol-1-yl)acetate

Xue-qun Fu\* and Guang-hai Xu

Ordered Matter Science Research Center, Southeast University, Nanjing 210096, People's Republic of China

Correspondence e-mail: fuxuequn222@163.com

Received 23 May 2009; accepted 25 May 2009

 Key indicators: single-crystal X-ray study;  $T = 298$  K; mean  $\sigma(\text{C}-\text{C}) = 0.006$  Å; disorder in main residue;  $R$  factor = 0.059;  $wR$  factor = 0.154; data-to-parameter ratio = 9.5.

In the title compound,  $\text{C}_{19}\text{H}_{18}\text{NO}_2$ , the dihedral angle between the benzimidazole and phenyl ring planes is  $18.18(17)^\circ$ . The atoms of the ethyl side chain are disordered over two sets of sites in a 0.50:0.50 ratio. In the crystal, intermolecular  $\text{C}-\text{H}\cdots\text{O}$  hydrogen bonds and  $\text{C}-\text{H}\cdots\pi$  contacts help to consolidate the packing.

## Ethyl (*E*)-1-(2-styryl-1*H*-benzimidazol-1-yl)acetate

X. Fu and G. Xu

### Comment

The benzimidazole ring system is of great interest because of its diverse biological activities while the synthesis and crystal structure analyses of several benzimidazoles have already been reported (Göker *et al.*, 1999; Özbey *et al.*, 1998).

In the structure of the title compound (Fig. 1), the benzimidazole system is essentially planar (dihedral angle 1.17 (2)°). The dihedral angle between the benzimidazole and styryl groups is 17.78 (1)°. The molecule is twisted with the N1—C4—C3—O1 torsion angle of 13.61 (4)° between the ethyl acetate and benzimidazole groups.

In the crystal, intermolecular C—H···O hydrogen bonds (Fig.2) link the molecules to chains along the *b* axis. In addition the C—H··· $\pi$  contacts (Table 1) further stabilize the crystal structure.

### Experimental

The synthesis of (*E*)-2-styryl-1*H*-benzimidazole was reported previously (Hang & Ye, 2008). Ethyl 2-bromoacetate (1.65 g, 10 mmol) was added to a solution of (*E*)-2-styryl-1*H*-benzo[*d*]imidazole (2.2 g, 10 mmol) and NaH (0.6 g, 26 mmol) in THF (30 ml). After the mixture was stirred for 12 h at room temperature, the precipitate was filtered off and the solution was evaporated in vacuum. The crude product was then crystallized from ethanol to yield colourless prisms of (I).

### Refinement

Anomalous dispersion was negligible and Friedel pairs were merged before refinement. The positional parameters of all the H atoms were calculated geometrically and refined as riding with  $U_{\text{iso}}(\text{H}) = 1.2U_{\text{eq}}(\text{C,N})$  or  $1.5U_{\text{eq}}(\text{methyl C})$ .

### Figures

Fig. 1. The molecular structure of (I) with displacement ellipsoids drawn at the 30% probability level (all H atoms have been omitted for clarity).

Fig. 2. A view of the packing of the title compound, stacking along the *b* axis. Dashed lines indicate hydrogen bonds.

$0.25 \times 0.25 \times 0.20$  mm

#### Data collection

Rigaku SCXmini  
diffractometer

Radiation source: fine-focus sealed tube

Monochromator: graphite

Detector resolution: 13.6612 pixels mm<sup>-1</sup>

$T = 298$  K

CCD\_Profile\_fitting scans

Absorption correction: multi-scan  
(CrystalClear; Rigaku, 2005)

$T_{\min} = 0.884$ ,  $T_{\max} = 0.984$

16640 measured reflections

2046 independent reflections

1545 reflections with  $I > 2\sigma(I)$

$R_{\text{int}} = 0.056$

$\theta_{\text{max}} = 27.5^\circ$

$\theta_{\text{min}} = 2.8^\circ$

$h = -15 \rightarrow 15$

$k = -18 \rightarrow 18$

$l = -12 \rightarrow 12$

#### Refinement

Refinement on  $F^2$

Least-squares matrix: full

$R[F^2 > 2\sigma(F^2)] = 0.058$

Primary atom site location: structure-invariant direct methods

Secondary atom site location: difference Fourier map

Hydrogen site location: inferred from neighbouring sites

$wR(F^2) = 0.151$

$S = 1.07$

2046 reflections

215 parameters

43 restraints

H-atom parameters constrained

$$w = 1/[\sigma^2(F_o^2) + (0.0802P)^2 + 0.1398P]$$

where  $P = (F_o^2 + 2F_c^2)/3$

$$\Delta\rho_{\max} = 0.16 \text{ e } \text{\AA}^{-3}$$

$$\Delta\rho_{\min} = -0.25 \text{ e } \text{\AA}^{-3}$$

Extinction correction: none

### Special details

**Geometry.** All esds (except the esd in the dihedral angle between two l.s. planes) are estimated using the full covariance matrix. The cell esds are taken into account individually in the estimation of esds in distances, angles and torsion angles; correlations between esds in cell parameters are only used when they are defined by crystal symmetry. An approximate (isotropic) treatment of cell esds is used for estimating esds involving l.s. planes.

**Refinement.** Refinement of  $F^2$  against ALL reflections. The weighted R-factor  $wR$  and goodness of fit  $S$  are based on  $F^2$ , conventional R-factors  $R$  are based on  $F$ , with  $F$  set to zero for negative  $F^2$ . The threshold expression of  $F^2 > 2\sigma(F^2)$  is used only for calculating R-factors(gt) etc. and is not relevant to the choice of reflections for refinement. R-factors based on  $F^2$  are statistically about twice as large as those based on  $F$ , and R- factors based on ALL data will be even larger.

### Fractional atomic coordinates and isotropic or equivalent isotropic displacement parameters ( $\text{\AA}^2$ )
