Correspondence e-mail: Houshc@cau.edu.cn, Wangmincau@yahoo.com.cn

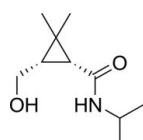

Received 4 October 2009; accepted 30 November 2009

Key indicators: single-crystal X-ray study; $T = 173\text{ K}$; mean $\sigma(\text{C}-\text{C}) = 0.004\text{ \AA}$; R factor = 0.042; wR factor = 0.110; data-to-parameter ratio = 9.5.

The asymmetric unit of the title compound, $\text{C}_{10}\text{H}_{19}\text{NO}_2$, prepared from (−)-1*R*-*cis*-caronaldehyde, contains two independent molecules. In the crystal structure, intermolecular $\text{O}-\text{H}\cdots\text{O}$ and $\text{O}-\text{H}\cdots\text{N}$ hydrogen bonds form an extensive three-dimensional hydrogen-bonding network.

Related literature

For details of the synthesis, see Huang *et al.* (2001). For the crystal structures of related derivatives of (−)-1*R*-*cis*-caronaldehyde, see: Na & Wang (2009); Wang *et al.* (2009).

(1*R*,3*S*)-3-Hydroxymethyl-*N*-isopropyl-2,2-dimethylcyclopropanecarboxamide

Jiangchun Zhong, Bing Zheng and Shicong Hou

S1. Comment

In continuation of our study of new (-)-1*R*-*cis*-caronaldehyde derivatives (Na & Wang, 2009; Wang *et al.*, 2009), we present here the crystal structure of the title compound (I).

The asymmetric unit of (I) contains two independent molecules (Fig. 1). The crystal structure is stabilized by intermolecular O—H···O and O—H···N hydrogen bonds (Table 1).

S2. Experimental

We have synthesized the title compound following the known procedure (Huang *et al.*, 2001).

(1*R*,5*S*)-4-hydroxy-6,6-dimethyl-3-oxa-bicyclo[3.1.0]-hexan-2-one (2.84 g, 20 mmol) was dissolved in the mixture of 30 ml of Et₂O and 5 ml of MeOH. This solution was cooled to 0°C and a solution of diazomethane in ether was added. The solution was slowly allowed to warm to room temperature without additional heating. The reaction mixture was concentrated under reduced pressure. The crude product was passed through a silica gel column (hexane/ethyl acetate = 6:1) to afford (1*R*,3*S*)-Methyl-3-formyl-2,2-dimethylcyclopropane-carboxylate as a colorless oil (2.9 g, 93% yield). $[\alpha]_D^{25} = -73.4$ (*c* 0.99, CHCl₃); IR (neat) 2957, 1731, 1701, 1439, 1379, 1200, 1137, 1119, 839 cm⁻¹; ¹H NMR (500 MHz, CDCl₃): δ 1.27 (s, 3H), 1.55 (s, 3H), 1.83–1.86 (m, 1H), 2.12 (d, 1H, *J* = 9.5 Hz), 3.71 (s, 3H), 9.75 (d, 1H, *J* = 9.5 Hz,); ¹³C NMR (125 MHz, CDCl₃): δ 15.5, 28.3, 29.8, 36.1, 40.9, 52.2, 170.4, 200.4; HRMS (TOF): *m/z* calcd for C₈H₁₃NO₃ [M^+H^+]: 157.0859, found: 157.0865.

NaBH₄ (3.78 g, 100 mmol) was dissolved in 60 ml of dry MeOH, and a solution of (1*R*,3*S*)-Methyl-3-formyl-2,2-dimethylcyclopropane-carboxylate (15.6 g, 100 mmol) in MeOH was added slowly into above mixture. After it, the reaction was kept for 30 min. Then, saturated HCl (1 ml) was added to stop the reaction and extracted with ether (40 ml *x*3). The organic layer was dried over anhydrous Na₂SO₄. Then, concentrated to give a light yellow oil (13.74 g, 87% yield). To a solution of benzene (60 ml) was added the light yellow oil (8 g, 50 mmol), the mixture was refluxed for 2 h. Then, concentrated under reduced pressure (2 m mHg, 56°C) to give (1*R*,5*S*)-6,6-Dimethyl-3-oxa-bicyclo[3.1.0]hexan-2-one with 90% yield. ¹H NMR (500 MHz, DMSO): δ 1.176 (3H, s), 1.184 (3H, s), 1.943–1.958 (1H, m), 2.034–2.059 (1H, m), 4.14–4.16 (d, 1H, *J* = 9.5 Hz), 4.350–4.381 (1H, m); ¹³C NMR (125 MHz, DMSO): δ 14.37, 22.99, 25.18, 30.01, 30.47, 66.49, 174.92.

The isopropanamine (2.2 ml, 20 mmol) was dissolved in dry THF (10 ml), cooled to -15°C, and, DIBAL-H (13 ml, 20 mmol) was injected. After the mixture was stirred for 20 min, the solution was allowed to warm to 30°C and to react for 3 h. Then, it was cooled to -5 °C, and a solution of (1*R*,5*S*)-6,6-Dimethyl-3-oxa-bicyclo[3.1.0]hexan-2-one (2.2 ml) in THF (7.5 ml) was added with stirring for 10 min. After 20 h at room temperature, the reaction was quenched with water (10 ml) and 4 N HCl (15 ml) and the mixture was extracted several times with Et₂O. The combined organic phases were washed with 1 N HCl, then, dried over Na₂SO₄ and concentrated under reduced pressure to give the products (1*R*,3*S*)-*N*-isopropyl-3-(hydroxymethyl)-2,2-dimethylcyclopropanecarboxamide (3.48 g, 87% yield). $[\alpha]_D^{20} = 41.0$ (*c* 1.14, CHCl₃);

IR(KBr): 3272.57, 2960.39, 1654.66, 1630.67, 1547.28, 1450.94, 1240.11, 1198.22, 1120.70, 1027.72, 699.99 cm⁻¹.
 NMR (500 MHz, DMSO): δ 1.144–1.200 (3H, s), 1.372–1.428 (3H, s), 1.657 (2H,m), 3.123–3.150 (1H,m), 3.840–3.883 (1H, m), 3.972–4.028 (1H, m), 4.442–4.458 (2H, m), 6.067 (1H, m), 7.264–7.302 (3H, m), 7.333–7.363 (2H, m).
¹³CNMR (125 MHz, DMSO): δ 15.48, 24.15, 28.59, 31.81, 32.59, 43.80, 59.08, 127.56, 127.76, 128.74, 138.18, 171.26.

S3. Refinement

All H atoms were positioned geometrically and treated as riding on their parent atoms, with C—H = 0.98 - 1.00 Å, O—H = 0.84 Å, and with U_{iso} (H) = 1.2–1.5 U_{eq} of the parent atom. In the absence of any significant anomalous scatterers in the molecule, the 1671 Friedel pairs were merged before the final refinement.

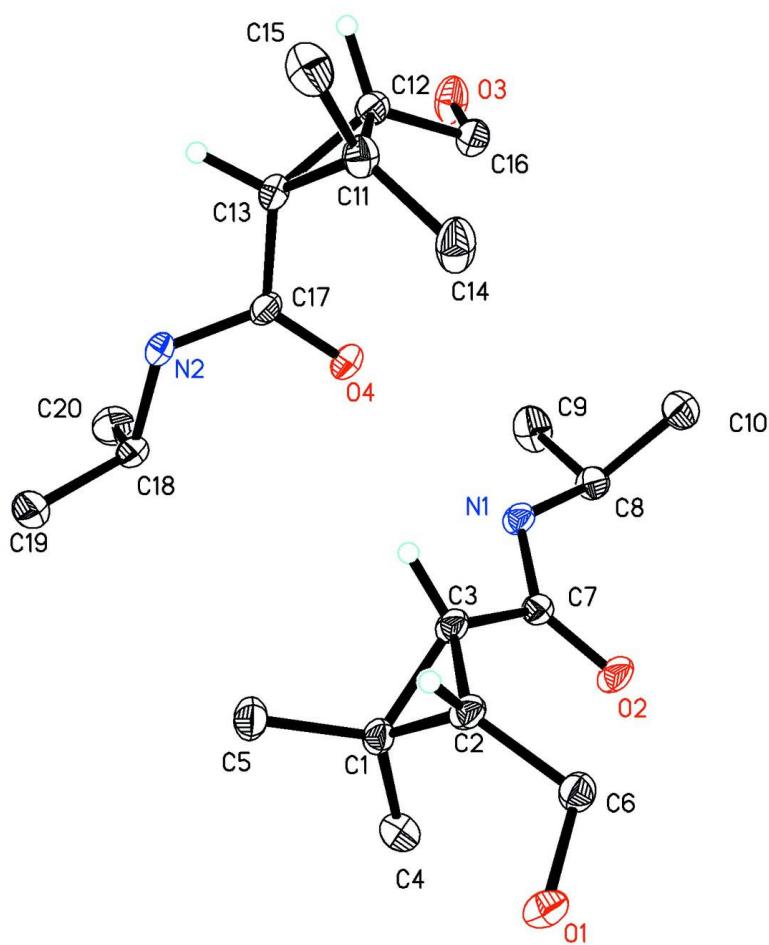

Figure 1

Two independent molecules of (I), with atomic labels and 30% probability displacement ellipsoids. Some of H atoms omitted for clarity.

Extinction coefficient: 0.0058 (5)

Special details

Geometry. All esds (except the esd in the dihedral angle between two l.s. planes) are estimated using the full covariance matrix. The cell esds are taken into account individually in the estimation of esds in distances, angles and torsion angles; correlations between esds in cell parameters are only used when they are defined by crystal symmetry. An approximate (isotropic) treatment of cell esds is used for estimating esds involving l.s. planes.

Refinement. Refinement of F^2 against ALL reflections. The weighted R-factor wR and goodness of fit S are based on F^2 , conventional R-factors R are based on F , with F set to zero for negative F^2 . The threshold expression of $F^2 > 2\text{sigma}(F^2)$ is used only for calculating R-factors(gt) etc. and is not relevant to the choice of reflections for refinement. R-factors based on F^2 are statistically about twice as large as those based on F , and R-factors based on ALL data will be even larger.
