{*N,N'*-Bis[1-(2-pyridyl)ethylidene]ethane-1,2-diamine- κ^4 *N,N',N'',N'''*}]bis(thiocyanato- κ *N*)manganese(II)}

Fu-Ming Wang

Department of Chemistry, Dezhou University, Dezhou Shandong 253023, People's Republic of China

Correspondence e-mail: wfm99999@126.com

Received 6 June 2010; accepted 6 June 2010

Key indicators: single-crystal X-ray study; $T = 298$ K; mean $\sigma(\text{C}-\text{C}) = 0.004$ Å; R factor = 0.039; wR factor = 0.093; data-to-parameter ratio = 17.5.

The molecule of the title compound, $[\text{Mn}(\text{NCS})_2(\text{C}_{16}\text{H}_{18}\text{N}_4)]$, has crystallographic twofold rotation symmetry, with the Mn^{II} atom lying on the rotation axis. The Mn^{II} atom is six-coordinated by four N atoms of the Schiff base ligand and by two N atoms of two thiocyanate ligands, forming a distorted octahedral geometry.

{*N,N'*-Bis[1-(2-pyridyl)ethylidene]ethane-1,2-diamine- κ^4 *N,N',N'',N'''*}]bis(thiocyanato- κ *N*)manganese(II)}

Fu-Ming Wang

S1. Comment

Metal complexes with Schiff bases have been known since 1840. The Schiff bases and their complexes have played an important role in the development of coordination chemistry, biological and material sciences (Ruck & Jacobsen, 2002; Mukhopadhyay *et al.*, 2003; Polt *et al.*, 2003; Mukherjee *et al.*, 2001). A few complexes derived from *N,N'*-bis-(1-(pyridin-2-yl)ethylidene)ethane-1,2-diamine have been reported (Gourbatsis *et al.*, 1998; Louloudi *et al.*, 1999; Karmakar *et al.*, 2002; Banerjee *et al.*, 2004). In this paper, the title new Mn(II) complex is reported.

The title compound possesses a crystallographic twofold rotation axis symmetry, Fig. 1. The Mn^{II} atom is six-coordinated by four N atoms of the Schiff base ligand *N,N'*-bis(1-(pyridin-2-yl)ethylidene)ethane-1,2-diamine, and by two N atoms from two thiocyanate ligands, forming a distorted octahedral geometry. The coordinate bond lengths (Table 1) are comparable with those observed in other similar manganese(II) complexes with Schiff bases (Louloudi *et al.*, 1999; Sra *et al.*, 2000; Karmakar *et al.*, 2005; Deoghoria *et al.*, 2005).

S2. Experimental

The Schiff base ligand *N,N'*-bis(1-(pyridin-2-yl)ethylidene)ethane-1,2-diamine was synthesized according to the literature method (Gourbatsis *et al.*, 1990). To a stirred methanol solution of the Schiff base ligand (1.0 mmol, 0.266 g) was added a methanol solution of manganese acetate (1.0 mmol, 0.245 g) and ammonium thiocyanate (1.0 mmol, 0.076 g). The mixture was boiled under reflux for 2 h, then cooled to room temperature. Brown block-like single crystals, suitable for X-ray diffraction, were formed after slow evaporation of the solution in air for a few days.

S3. Refinement

H atoms were placed in geometrically idealized positions and constrained to ride on their parent atoms, with C–H distances of 0.93–0.97 Å, and with $U_{\text{iso}}(\text{H})$ set at $1.2U_{\text{eq}}(\text{C})$ and $1.5U_{\text{eq}}(\text{C}_{\text{methyl}})$.

Figure 1

The molecular structure of the title compound, showing the atom-numbering scheme. Displacement ellipsoids are drawn at the 30% probability level. Unlabelled atoms are related to labelled atoms by the symmetry operation $(1 - x, y, 1/2 - z)$.

Special details

Geometry. All e.s.d.'s (except the e.s.d. in the dihedral angle between two l.s. planes) are estimated using the full covariance matrix. The cell e.s.d.'s are taken into account individually in the estimation of e.s.d.'s in distances, angles and torsion angles; correlations between e.s.d.'s in cell parameters are only used when they are defined by crystal symmetry. An approximate (isotropic) treatment of cell e.s.d.'s is used for estimating e.s.d.'s involving l.s. planes.

Refinement. Refinement of F^2 against ALL reflections. The weighted R -factor wR and goodness of fit S are based on F^2 , conventional R -factors R are based on F , with F set to zero for negative F^2 . The threshold expression of $F^2 > \sigma(F^2)$ is used only for calculating R -factors(gt) *etc.* and is not relevant to the choice of reflections for refinement. R -factors based on F^2 are statistically about twice as large as those based on F , and R -factors based on ALL data will be even larger.
