

## 2-[4-(2,6-Dimethoxyphenyl)butyl]-1,3-dimethoxybenzene

Christopher M. Kane, Stephen D. Drake and K. Travis Holman\*

Department of Chemistry, Georgetown University, 37th and O St NW, Washington, DC 20057, USA

Correspondence e-mail: kth7@georgetown.edu

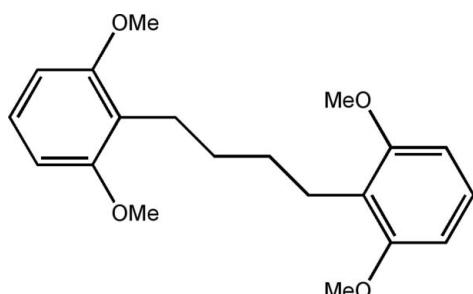

Received 3 June 2010; accepted 28 June 2010

Key indicators: single-crystal X-ray study;  $T = 100\text{ K}$ ; mean  $\sigma(\text{C}-\text{C}) = 0.001\text{ \AA}$ ;  $R$  factor = 0.035;  $wR$  factor = 0.098; data-to-parameter ratio = 12.9.

The title compound,  $C_{20}H_{26}O_4$ , crystallizes such that the alkyl chain adopts an all-*anti* conformation. The crystal packing displays edge-to-face arene–arene interactions with a dihedral angle of  $87^\circ$ . The complete molecule is generated by inversion symmetry.

### Related literature

For related compounds containing tethered 2,6-dimethoxybenzene fragments, see: Ionkin *et al.* (2003); Evans *et al.* (1991); Yoshimura *et al.* (2008); Shinohara *et al.* (2008); Ono *et al.* (2008). For a related structure, see: Fleck *et al.* (2005). For the synthesis and further studies, see: Lettré *et al.* (1952); Tanaka *et al.* (1989). The rather large crystal used for data collection was chosen in order to optimize data intensity. For weakly absorbing materials, SADABS is known to be effective at correcting for crystal sizes larger than the beam without introducing systematic errors, see, for example: Görbitz (1999).

### Experimental

#### Crystal data

$C_{20}H_{26}O_4$	$V = 1725.4(3)\text{ \AA}^3$
$M_r = 330.41$	$Z = 4$

## 2-[4-(2,6-Dimethoxyphenyl)butyl]-1,3-dimethoxybenzene

Christopher M. Kane, Stephen D. Drake and K. Travis Holman

### S1. Comment

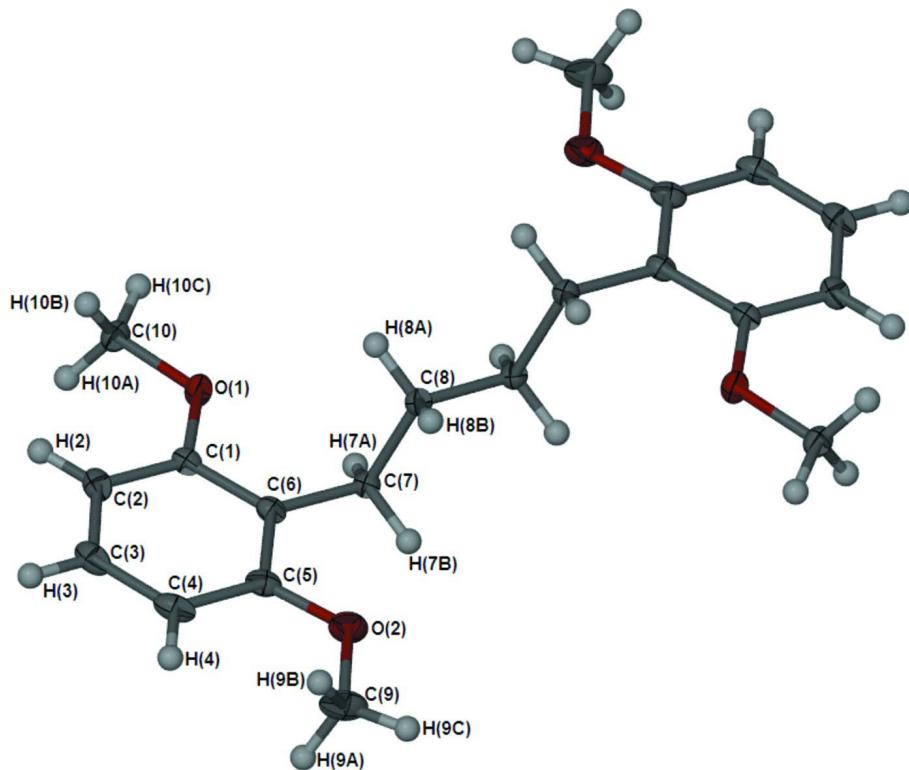

Several tethered 2,6-dimethoxyphenyl derivatives have been synthesized containing conjugated linkers comprised of alkenyl and alkynyl units (Yoshimura *et al.*, 2008, Shinohara *et al.*, 2008, and Ono *et. al.*, 2008).

The conformation of the title compound is similar to the hydrocarbon 1,4-diphenylbutane (Fleck *et al.*, 2005). Both molecules exhibit an all *anti* aliphatic conformation. The title compound maintains aromatic C—C bond distances in the range of 1.3844 (16)–1.4042 (13) Å, and aliphatic C—C bonds from 1.5096 (12)–1.5349 (12) Å. One striking difference between the compounds is the crystal packing, which adopts a herringbone pattern for the title compound, whereas in 1,4-diphenylbutane, neither edge-to-face nor  $\pi$ – $\pi$  stacking interactions are observed.

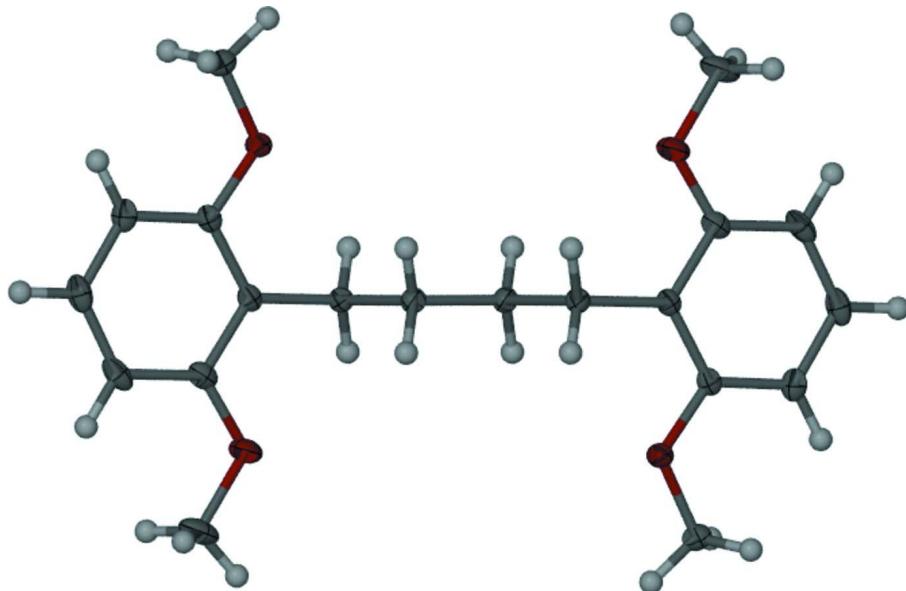

The rather large crystal (~1 mm) used for data collection was chosen in order to optimize data intensity. For weakly absorbing materials, *SADABS* is known to be effective at correcting for crystal sizes larger than the beam, without introducing systematic errors. See, for example: Görbitz (1999).

### S2. Experimental

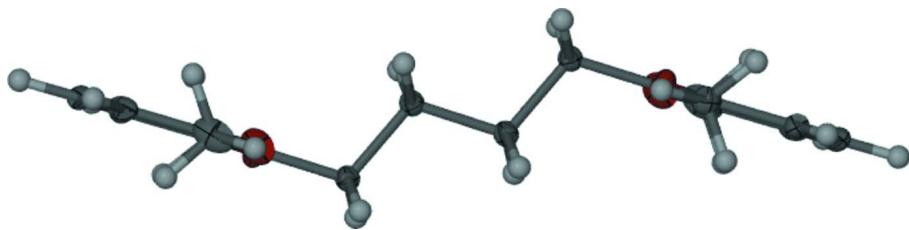

The title compound was obtained by lithiation (10 ml, 2.5 M *n*-BuLi in hexanes) of 1,3-dimethoxybenzene (3.45 g, 25 mmol) under nitrogen atmosphere. Following distillation of hexanes and subsequent addition of 1,4-dibromohexane (2.16 g, 10 mmol), the mixture was heated to 150°C for 2 days. After cooling, the mixture was quenched with water (150 ml) and the product was removed and was recrystallized with a 3:1 hexanes/ethyl acetate solution to afford an off-white compound in 72% yield. Single crystals were obtained by slow evaporation from ethanol.

### 2-[4-(2,6-Dimethoxyphenyl)butyl]-1,3-dimethoxybenzene

#### *Crystal data*

$C_{20}H_{26}O_4$

$M_r = 330.41$

Orthorhombic,  $Pbcn$

Hall symbol: -P 2yn

$a = 22.692 (2)$  Å

$b = 5.5460 (5)$  Å

$c = 13.7099 (13)$  Å

$V = 1725.4 (3)$  Å<sup>3</sup>

$Z = 4$

$F(000) = 712$

$D_x = 1.272$  Mg m<sup>-3</sup>

Melting point = 429–431 K

Mo  $K\alpha$  radiation,  $\lambda = 0.71073$  Å

Cell parameters from 6702 reflections

$\theta = 3.0\text{--}28.5^\circ$

$\mu = 0.09$  mm<sup>-1</sup>

$T = 100$  K

Prism, colorless

0.98 × 0.36 × 0.22 mm

#### *Data collection*

Bruker SMART APEXII CCD  
diffractometer

Radiation source: fine-focus sealed tube

Graphite monochromator

$\varphi$  and  $\omega$  scans

Absorption correction: multi-scan

(*SADABS*; Bruker, 2001)

$T_{\min} = 0.916$ ,  $T_{\max} = 0.981$

14196 measured reflections  
 2071 independent reflections  
 1853 reflections with  $I > 2\sigma(I)$   
 $R_{\text{int}} = 0.020$

$\theta_{\max} = 28.0^\circ$ ,  $\theta_{\min} = 1.8^\circ$   
 $h = -29 \rightarrow 29$   
 $k = -7 \rightarrow 7$   
 $l = -17 \rightarrow 17$

#### Refinement

Refinement on  $F^2$   
 Least-squares matrix: full  
 $R[F^2 > 2\sigma(F^2)] = 0.035$   
 $wR(F^2) = 0.098$   
 $S = 1.05$   
 2071 reflections  
 161 parameters  
 0 restraints  
 Primary atom site location: structure-invariant direct methods

Secondary atom site location: difference Fourier map  
 Hydrogen site location: inferred from neighbouring sites  
 All H-atom parameters refined  
 $w = 1/[c^2(F_o^2) + (0.0534P)^2 + 0.4726P]$   
 where  $P = (F_o^2 + 2F_c^2)/3$   
 $(\Delta/\sigma)_{\max} < 0.001$   
 $\Delta\rho_{\max} = 0.29 \text{ e } \text{\AA}^{-3}$   
 $\Delta\rho_{\min} = -0.17 \text{ e } \text{\AA}^{-3}$

#### Special details

**Geometry.** All e.s.d.'s (except the e.s.d. in the dihedral angle between two l.s. planes) are estimated using the full covariance matrix. The cell e.s.d.'s are taken into account individually in the estimation of e.s.d.'s in distances, angles and torsion angles; correlations between e.s.d.'s in cell parameters are only used when they are defined by crystal symmetry. An approximate (isotropic) treatment of cell e.s.d.'s is used for estimating e.s.d.'s involving l.s. planes.

**Refinement.** Refinement of  $F^2$  against ALL reflections. The weighted  $R$ -factor  $wR$  and goodness of fit  $S$  are based on  $F^2$ , conventional  $R$ -factors  $R$  are based on  $F$ , with  $F$  set to zero for negative  $F^2$ . The threshold expression of  $F^2 > \sigma(F^2)$  is used only for calculating  $R$ -factors(gt) etc. and is not relevant to the choice of reflections for refinement.  $R$ -factors based on  $F^2$  are statistically about twice as large as those based on  $F$ , and  $R$ -factors based on ALL data will be even larger.
