Received 22 December 2010; accepted 24 December 2010

Key indicators: single-crystal X-ray study;  $T = 296\text{ K}$ ; mean  $\sigma(\text{C}-\text{C}) = 0.005\text{ \AA}$ ;  $R$  factor = 0.038;  $wR$  factor = 0.090; data-to-parameter ratio = 15.2.

The asymmetric unit of the title compound,  $[\text{CuCl}(\text{C}_{12}\text{H}_8\text{N}_2)_2]\cdot[\text{CuCl}_2]$ , contains two complex Cu(II) cations and two cuprate(I) anions. The Cu(II) atom is coordinated by two phenanthroline (phen) molecules and one chloride anion in a distorted trigonal-bipyramidal geometry. The Cu(II) complex cations form layers through  $\pi-\pi$  stacking [interplanar distance = 3.481 (2)  $\text{\AA}$ ]. The dichloridocuprate(I) anions are located between the layers, forming a sandwich-like structure.

## Related literature

For the use of 1,10-phenanthroline (phen) in copper complexes, see: Wang *et al.* (2002, 2003); Lan *et al.* (2007). For complexes involving five-coordinated copper atoms with 1,10-phen ligands, see: Gkioni *et al.* (2008); Mao *et al.* (2004); Ma *et al.* (2000); Hu *et al.* (2006). For mixed-valence copper complexes with 1,10-phen, see: Xu *et al.* (2007).

## Experimental

## **Chloridobis(1,10-phenanthroline- $\kappa^2N,N'$ )copper(I) dichloridocopper(II)**

**Qingfen Meng, Yanmei Chen, Bing Li, Sanping Chen and Shengli Gao**

### **S1. Comment**

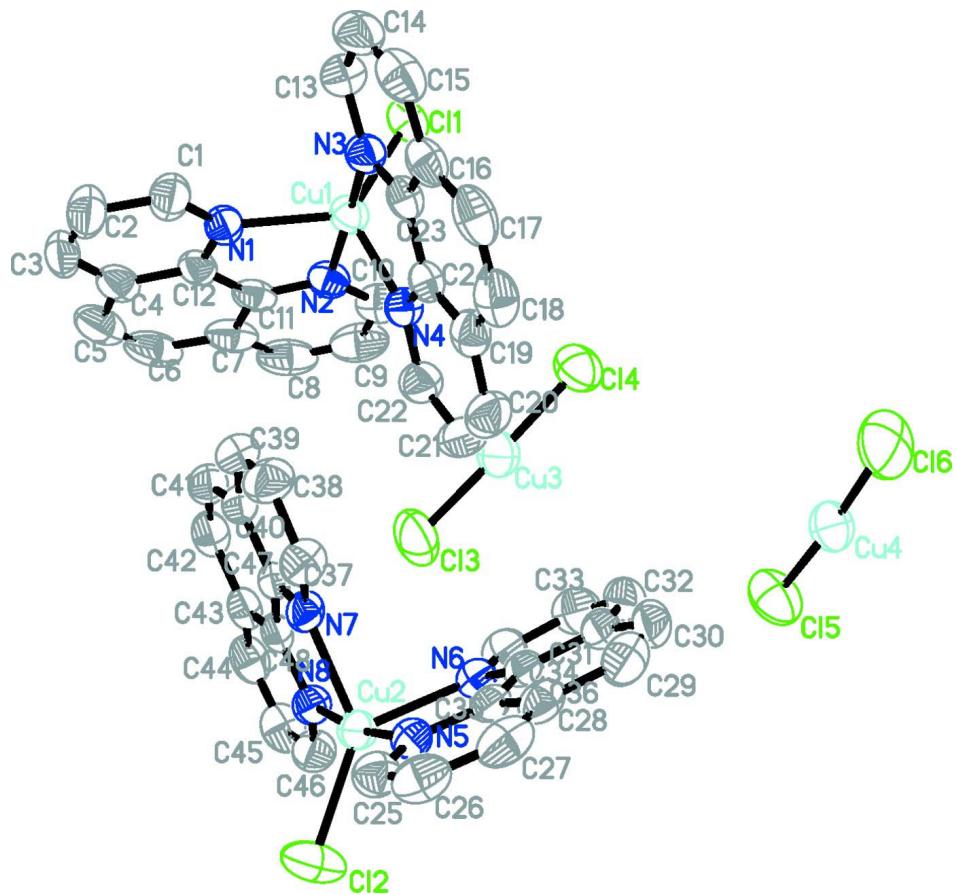

As bidentate diimine ligand, 1,10-phenanthroline (phen), has been widely used as the second ligand in prepare many kinds of metal-coordination complexes, especially in copper(II) complexes (Wang *et al.* 2003, Wang *et al.* 2002, Lan *et al.* 2007). Although many five-coordinated copper(II) complexes are well documented (Gkioni *et al.* 2008, Mao *et al.* 2004, Ma *et al.* 2000, Hu *et al.* 2006), the presence mixed-charge complexes have been rarely observed (Xu *et al.* 2007). Here we report a mixed-charge copper complex with 1,10-phenanthroline as coordinate ligand, this complex was constituted through  $\pi$ - $\pi$  interactions. The Molecular structure of **1** showing 50% probability displacement ellipsoids was shown in Fig. 1. The coordinate environment of complex **1** shown in figure 2. The Packing diagram of **1** viewed down the *a*-axis was presented in Fig. 3. Selected band length and angle see table 1.

### **S2. Experimental**

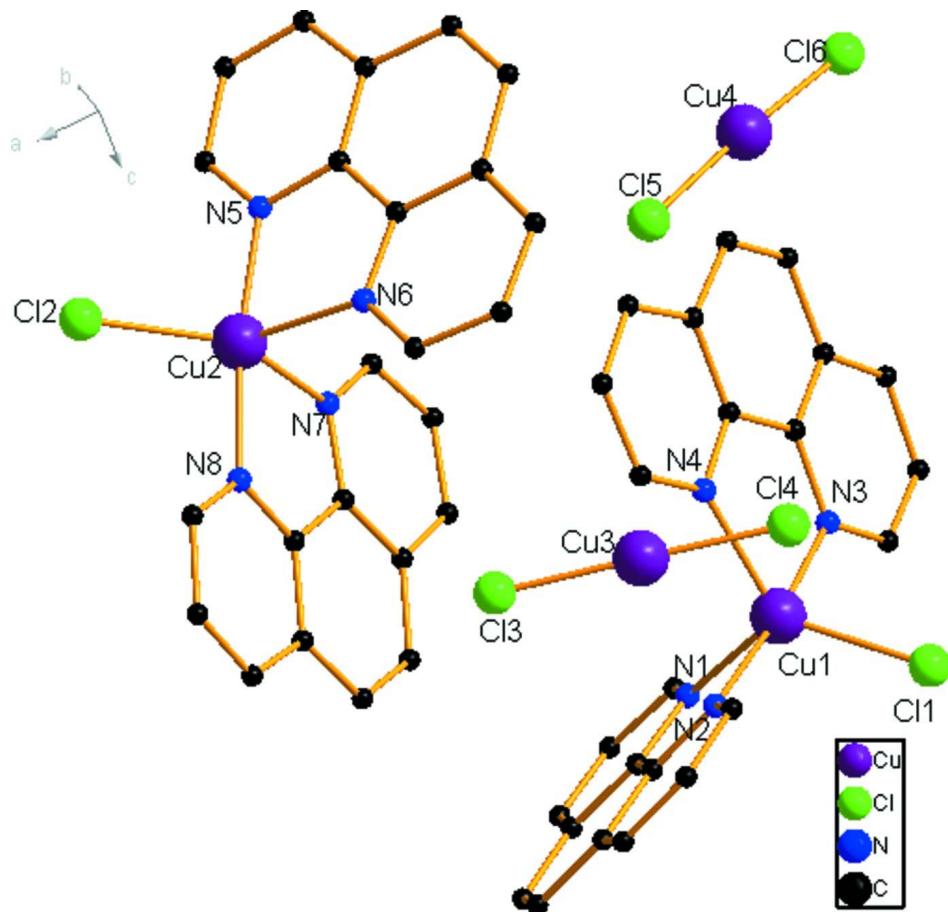

The complex **1** was synthesized by solvothermal reaction. A mixture of 1,10-Phenanthroline monohydrate(0.0198 g, 0.1 mmol), CuCl<sub>2</sub>.2H<sub>2</sub>O (0.0170 g, 0.1 mmol), L1 (L1 = HO-(Ph)—CH=N—Ph—O—Ph—N=CH-(Ph)—OH (0.0204 g, 0.05 mmol) and CH<sub>3</sub>CH<sub>2</sub>OH (3 ml) was sealed in a 6 ml glass tube and heated to 393 K for 72 h. After cooling to room temperature, green crystals were obtained concomitant with a lot of brown precipitation. The color of solution is light-brown. The ligand of L1 could't coordinate with Cu.

### **S3. Refinement**

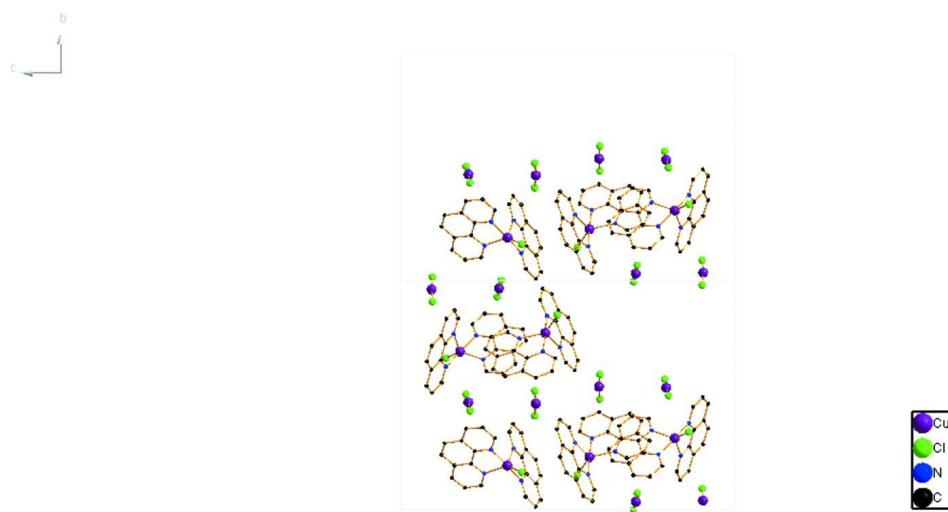

H atoms were placed in calculated positions with C—H = 0.93 (aromatic) refined in riding mode, with  $U_{\text{iso}}(\text{H}) = 1.2 U_{\text{eq}}(\text{C})$ .

**Figure 1**

*Special details*

**Geometry.** All e.s.d.'s (except the e.s.d. in the dihedral angle between two l.s. planes) are estimated using the full covariance matrix. The cell e.s.d.'s are taken into account individually in the estimation of e.s.d.'s in distances, angles and torsion angles; correlations between e.s.d.'s in cell parameters are only used when they are defined by crystal symmetry. An approximate (isotropic) treatment of cell e.s.d.'s is used for estimating e.s.d.'s involving l.s. planes.

**Refinement.** Refinement of  $F^2$  against ALL reflections. The weighted  $R$ -factor  $wR$  and goodness of fit  $S$  are based on  $F^2$ , conventional  $R$ -factors  $R$  are based on  $F$ , with  $F$  set to zero for negative  $F^2$ . The threshold expression of  $F^2 > \sigma(F^2)$  is used only for calculating  $R$ -factors(gt) etc. and is not relevant to the choice of reflections for refinement.  $R$ -factors based on  $F^2$  are statistically about twice as large as those based on  $F$ , and  $R$ -factors based on ALL data will be even larger.
