Correspondence e-mail: wllily315668256@yahoo.com.cn

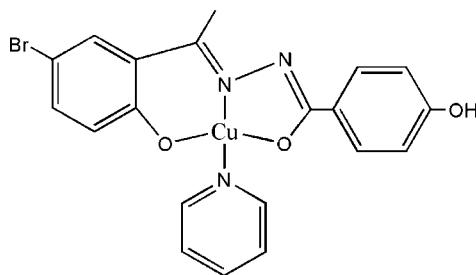

Received 6 March 2011; accepted 31 March 2011

Key indicators: single-crystal X-ray study; $T = 298\text{ K}$; mean $\sigma(\text{C}-\text{C}) = 0.005\text{ \AA}$; R factor = 0.040; wR factor = 0.103; data-to-parameter ratio = 13.0.

In the title complex, $[\text{Cu}(\text{C}_{15}\text{H}_{11}\text{BrN}_2\text{O}_3)(\text{C}_5\text{H}_5\text{N})]$, the central Cu^{II} atom is in a square-planar CuN_2O_2 coordination environment formed by the tridentate hydrazone and the monodentate pyridine ligands with N atoms in a *trans*-arrangement about the Cu^{II} atom.

S1. Comment

The chemistry of arylhydrazone continues to attract much attention due to their coordination ability towards metal ions (Zheng *et al.*, 2008; Ali *et al.*, 2004) and their biological activity (Carcelli *et al.*, 1995). As an extension of work on the structural characterization of arylhydrazone derivatives, the title compound, $C_{20}H_{16}BrCuN_3O_3$, was synthesized and its crystal structure is reported here (Fig.1).

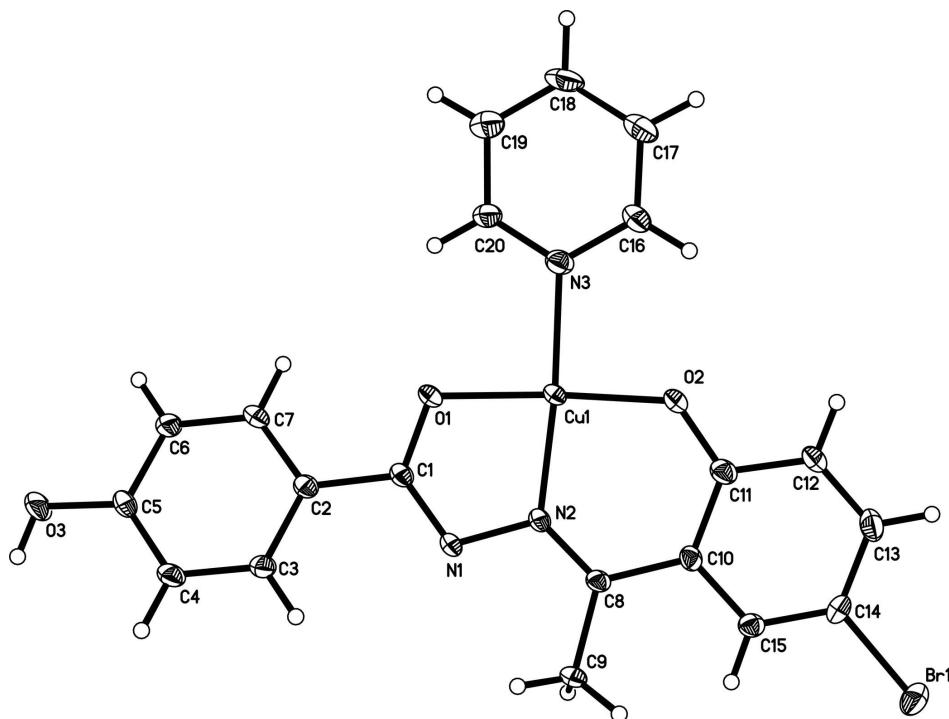

S2. Experimental

Ethyl 4-hydroxybenzoate (8.31 g, 0.05 mol) was dissolved in ethanol (30 ml) at room temperature and heated at 363 K, followed by the addition of hydrazine hydrate (3.25 g, 0.065 mol). Subsequently, the mixture was refluxed for 8 h, and then cooled to room temperature. The crystals were precipitated and collected by filtration. The product was recrystallized from ethanol and dried under reduced pressure to give (4-hydroxybenzoyl)hydrazine. (2-Hydroxybenzoyl)hydrazine (3.50 g, 0.023 mol) was dissolved in ethanol (30 ml) at room temperature and heated at 363 K, followed by the addition of 5-bromo-2-hydroxyphenyl ethyl ketone (4.95 g, 0.023 mol). Subsequently, the mixture was refluxed for 8 h, and then cooled to room temperature. The crystals were precipitated and collected by filtration. The product was recrystallized from ethanol and dried under reduced pressure to give *N'*-[*(E*)-(5-bromo-2-hydroxyphenyl)-ethylidene]-4-hydroxybenzohydrazide.

A methanol solution (10 ml) of *N'*-[*(E*)-(5-bromo-2-hydroxyphenyl) ethylidene]-4-hydroxybenzohydrazide (0.25 mmol, 0.087 g) was mixed with a DMF solution (5 ml) of $CuCl_2 \cdot 2H_2O$ (0.25 mmol, 0.043 g). The mixture was stirred at 298 K for 2 h. and then filtered. A blue precipitate was produced after about 15 days. A pyridine amount (5 ml) was used to dissolve the precipitate at 330 K. Blue block-shaped crystals of the title complex were obtained after one month (yield 30%).

S3. Refinement

All H atoms were positioned geometrically and treated as riding on their parent atoms, with $C—H(\text{methyl}) = 0.96 \text{ \AA}$, $C—H(\text{aromatic}) = 0.93 \text{ \AA}$, $O—H = 0.82 \text{ \AA}$ and with $U_{\text{iso}}(\text{H}) = 1.5U_{\text{eq}}(\text{C}_{\text{methyl}}, \text{O})$ and $1.2U_{\text{eq}}(\text{C}_{\text{aromatic}})$.

**Figure 1**

The molecular structure of the title compound with displacement ellipsoids drawn at the 30% probability level. H atoms are presented as a small spheres of arbitrary radius.

Special details

Geometry. All e.s.d.'s (except the e.s.d. in the dihedral angle between two l.s. planes) are estimated using the full covariance matrix. The cell e.s.d.'s are taken into account individually in the estimation of e.s.d.'s in distances, angles and torsion angles; correlations between e.s.d.'s in cell parameters are only used when they are defined by crystal symmetry. An approximate (isotropic) treatment of cell e.s.d.'s is used for estimating e.s.d.'s involving l.s. planes.

Refinement. Refinement of F^2 against ALL reflections. The weighted R -factor wR and goodness of fit S are based on F^2 , conventional R -factors R are based on F , with F set to zero for negative F^2 . The threshold expression of $F^2 > \sigma(F^2)$ is used only for calculating R -factors(gt) etc. and is not relevant to the choice of reflections for refinement. R -factors based on F^2 are statistically about twice as large as those based on F , and R -factors based on ALL data will be even larger.
