Received 30 May 2011; accepted 15 June 2011

Key indicators: single-crystal X-ray study;  $T = 293\text{ K}$ ; mean  $\sigma(\text{C}-\text{C}) = 0.002\text{ \AA}$ ;  $R$  factor = 0.029;  $wR$  factor = 0.080; data-to-parameter ratio = 14.1.

In the crystal structure of the title compound,  $2\text{C}_2\text{H}_8\text{NO}^+ \cdot \text{C}_{10}\text{H}_6\text{O}_6\text{S}_2^{2-}$ , the anion lies on an inversion centre. The components are held together by  $\text{O}-\text{H} \cdots \text{O}$  hydrogen bond, forming a 2:1 aggregate. The aggregates are further connected by  $\text{N}-\text{H} \cdots \text{O}$  and  $\text{C}-\text{H} \cdots \text{O}$  hydrogen bonds.

## Bis(2-hydroxyethanaminium) naphthalene-1,5-disulfonate

Cong Wang and Sheng Li Yang

### S1. Comment

Several supramolecular structures of naphthalene-1,5-disulfonate have been reported previously (Russell *et al.*, 1997; Zhang *et al.*, 2005; Gao *et al.*, 2005; Wang *et al.*, 2008). As an extension of research, we report here the synthesis and structure of the title compound, (I) (Table 1 & Fig. 1).

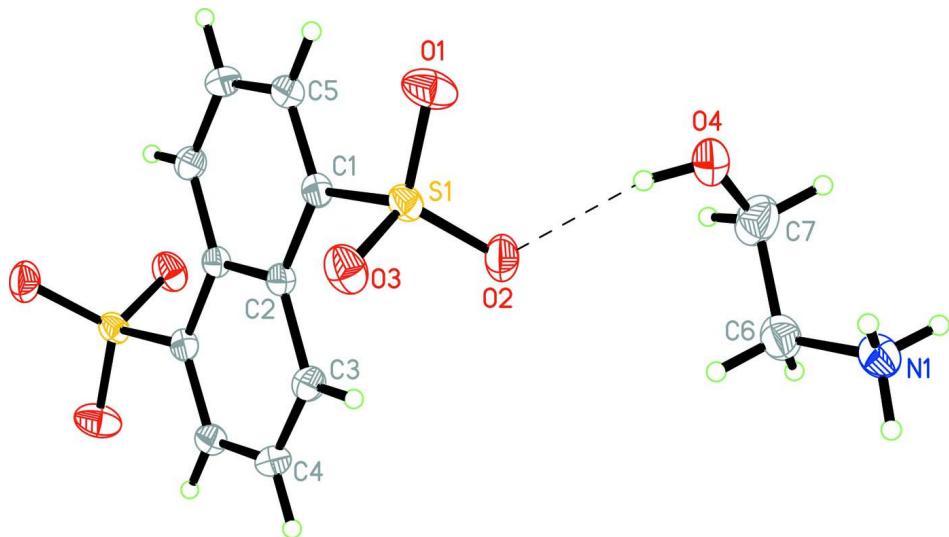

The naphthalene-1,5-disulfonate anion is linked to the ethanolaminium cation by O<sub>2</sub>—H<sub>4'</sub>···O<sub>4</sub> hydrogen bond (Fig. 1 & Table 1). The crystal structure is further built by N—H···O and C—H···O hydrogen bonds. (Fig. 2 & Table 1). Due to steric hindrance of sulfonate, the nearest centroid separation between naphthalene rings is of 5.264 (3) Å, suggesting no  $\pi$ – $\pi$  stacking. The arrangement of naphthalene rings is very similar to those observed in previous cases (Sakwa & Wheeler, 2003; Li & Chai, 2007; Wang *et al.*, 2008), but is different from that in bis(oxonium monohydrate) naphthalene-1,5-disulfonate, which shows a partial  $\pi$ – $\pi$  stacking.

### S2. Experimental

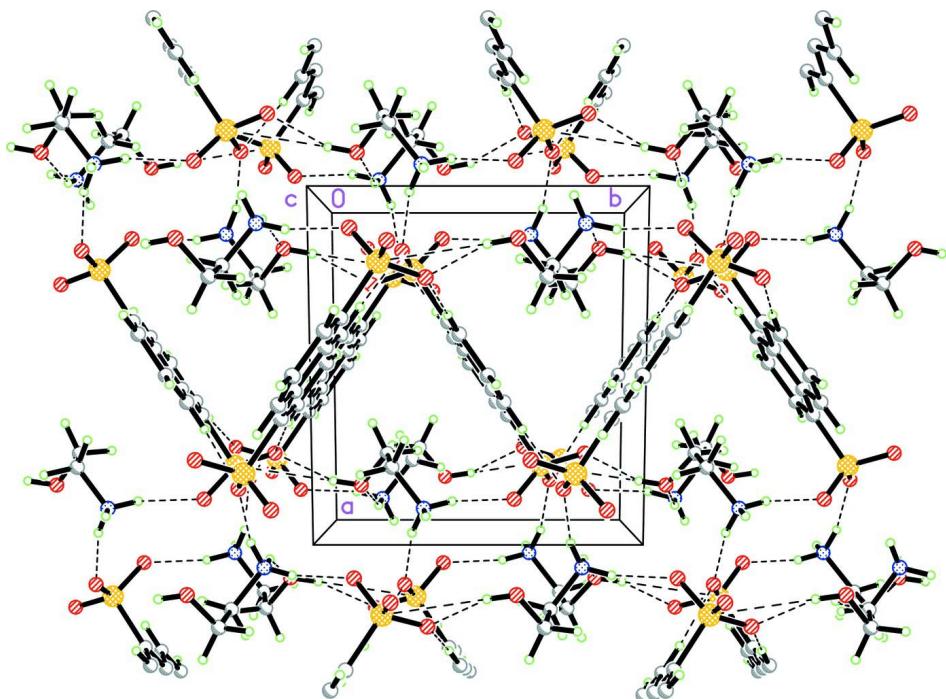

Naphthalene-1,5-disulfonic acid (5.1 g) and ethanolamine (1.2 g) in a molar ratio of 1:1 were mixed and dissolved in sufficient ethanol by heating to 373 K, at which point a clear solution resulted. The system was then cooled slowly to room temperature. Crystals of (I) (4.7 g) were formed, collected and washed with ethanol.

### S3. Refinement

All H atoms except atom H<sub>4'</sub> were placed in calculated positions and allowed to ride on their parent atoms with distances of 0.93 Å for aromatic group, 0.97 Å for methylene and 0.89 Å for amino group, and with  $U_{\text{iso}}(\text{H})$  set at 1.2 or 1.5  $U_{\text{eq}}$  of the parent atoms. The positions of atom H<sub>4'</sub> were refined with a distance restraint O—H = 0.84 (2) Å, and with  $U_{\text{iso}}(\text{H})$  = 1.5  $U_{\text{eq}}(\text{O})$ .

**Figure 1**

The molecular structure of the title compound. The unlabeled half of naphthalene-1,5-disulfonate anion are generated from the labeled half by symmetry operation of  $(1 - x, 2 - y, - z)$ . The O—H···O hydrogen bond is illustrated as a dashed line.

**Figure 2**

The crystal packing of the title compound, viewed down the *c* axis. Hydrogen bonds are drawn as dashed lines.

Extinction coefficient: 0.017 (3)

*Special details*

**Geometry.** All e.s.d.'s (except the e.s.d. in the dihedral angle between two l.s. planes) are estimated using the full covariance matrix. The cell e.s.d.'s are taken into account individually in the estimation of e.s.d.'s in distances, angles and torsion angles; correlations between e.s.d.'s in cell parameters are only used when they are defined by crystal symmetry. An approximate (isotropic) treatment of cell e.s.d.'s is used for estimating e.s.d.'s involving l.s. planes.

**Refinement.** Refinement of  $F^2$  against ALL reflections. The weighted  $R$ -factor  $wR$  and goodness of fit  $S$  are based on  $F^2$ , conventional  $R$ -factors  $R$  are based on  $F$ , with  $F$  set to zero for negative  $F^2$ . The threshold expression of  $F^2 > \sigma(F^2)$  is used only for calculating  $R$ -factors(gt) etc. and is not relevant to the choice of reflections for refinement.  $R$ -factors based on  $F^2$  are statistically about twice as large as those based on  $F$ , and  $R$ -factors based on ALL data will be even larger.
