Received 19 July 2011; accepted 22 July 2011
Key indicators: single-crystal X-ray study; $T=293 \mathrm{~K}$; mean $\sigma(\mathrm{C}-\mathrm{C})=0.006 \AA$; $R$ factor $=0.058 ; w R$ factor $=0.139$; data-to-parameter ratio $=14.6$.

In the crystal structure of the title compound, $\mathrm{C}_{22} \mathrm{H}_{28} \mathrm{~N}_{2} \mathrm{O}_{6} \mathrm{~S}_{2}$, the asymmetric unit contains one half molecule with a center of symmetry at the mid-point of the central $\mathrm{C}-\mathrm{C}$ bond. The conformations of all the $\mathrm{N}-\mathrm{H}, \mathrm{C}=\mathrm{O}$ and $\mathrm{C}-\mathrm{H}$ bonds in the central amide and aliphatic segments are anti to their adjacent bonds. The molecule is bent at the S atom with an $\mathrm{C}-\mathrm{SO}_{2}-$ $\mathrm{NH}-\mathrm{C}(\mathrm{O})$ torsion angle of $-76.4(3)^{\circ}$. The dihedral angle between the benzene ring and the $\mathrm{SO}_{2}-\mathrm{NH}-\mathrm{C}(\mathrm{O})$ segment in the two halves of the molecule is $67.2(1)^{\circ}$. In the crystal, $\mathrm{N}-\mathrm{H} \cdots \mathrm{O}(\mathrm{C})$ intermolecular hydrogen bonds link the molecules into chains along the $b$ axis.

## $N, N^{\prime}$-Bis(4-methylphenylsulfonyl)suberamide

Vinola Z. Rodrigues, Sabine Foro and B. Thimme Gowda

## S1. Comment

The amide and sulfonamide moieties are important constituents of many biologically significant compounds. As part of our studies on the effects of ring and side chain substitutions on the structures and other aspects of $N$-(aryl)-amides (Arjunan et al., 2004; Gowda et al., 1999, 2006), $N$-(aryl)-methanesulfonamides (Gowda et al., 2007) and N-(aryl-sulfonyl)-amides (Rodrigues et al., 2011), the crystal structure of $N, N$-bis(4-methylphenylsulfonyl)-suberamide (I) has been determined (Fig. 1).
In the two $\mathrm{C}-\mathrm{SO}_{2}-\mathrm{NH}-\mathrm{CO}-\mathrm{CH}_{2}-\mathrm{CH}_{2}-\mathrm{CH}_{2}-$ central segments of the structure, all the $\mathrm{N}-\mathrm{H}, \mathrm{C}=\mathrm{O}$ and $\mathrm{C}-\mathrm{H}$ bonds in the amide and aliphatic segments are anti to the adjacent bonds, similar to that observed in $\mathrm{N}, \mathrm{N}$-bis(4-chloro-phenylsulfonyl)-suberamide (II) (Rodrigues et al., 2011). The orientations of sulfonamide groups with respect to the attached phenyl rings are given by the $\mathrm{C} 2-\mathrm{C} 1-\mathrm{S} 1-\mathrm{N} 1$ and $\mathrm{C} 6-\mathrm{C} 1-\mathrm{S} 1-\mathrm{N} 1$ torsion angles of $78.2(4)^{\circ}$ and $-104.3(3)^{\circ}$, respectively, compared to the corresponding angles of $67.2(3)^{\circ}$ and -113.9 (4) ${ }^{\circ}$ in (II).
The molecule is bent at the S atom with the $\mathrm{C} 1-\mathrm{S} 1-\mathrm{N} 1-\mathrm{C} 7$ torsion angle of $-76.4(3)^{\circ}$, compared to the value of $-80.6(4)^{\circ}$ in (II). In (I), the aliphatic chain is almost linear with C7-C8-C9-C10 torsion angle of -176.9 (3) ${ }^{\circ}$, compared to the value of -179.4 (4) ${ }^{\circ}$ in (II).
The dihedral angle between the benzene ring and the $\mathrm{SO}_{2}-\mathrm{NH}-\mathrm{C}(\mathrm{O})$ segment in the two halves of the molecule is $67.2(1)^{\circ}$, compared to the value of $79.5(2)^{\circ}$ in (II).
The structure shows simultaneous of $\mathrm{N}-\mathrm{H} \cdots \mathrm{O}(\mathrm{C})$ and $\mathrm{N}-\mathrm{H} \cdots \mathrm{O}(\mathrm{S})$ intermolecular hydrogen bonds (Table 1), which link the molecules into infinite chains along the $b$-axis.

## S2. Experimental

$N, N$-Bis(4-methylphenylsulfonyl)-suberamide was prepared by refluxing a mixture of suberic acid ( 0.01 mol ) with 4methylbenzenesulfonamide $(0.02 \mathrm{~mol})$ and $\mathrm{POCl}_{3}(0.02 \mathrm{~mol})$ for 1 h on a water bath. The reaction mixture was allowed to cool and added ether to it. The solid product obtained was filtered, washed thoroughly with ether and hot ethanol. The compound was recrystallized to the constant melting point and was characterized by its infrared and NMR spectra.
Plate like colorless single crystals used in the X-ray diffraction studies were grown by a slow evaporation of a solution of the compound in ethanol at room temperature.

## S3. Refinement

The H atom of the NH group was located in a difference map and later restrained to the distance $\mathrm{N}-\mathrm{H}=0.86$ (2) $\AA$. The other H atoms were positioned with idealized geometry using a riding model with the aromatic $\mathrm{C}-\mathrm{H}=0.93 \AA$, the methyl $\mathrm{C}-\mathrm{H}=0.96 \AA$ and the methylene $\mathrm{C}-\mathrm{H}=0.97 \AA$. All H atoms were refined with isotropic displacement parameters. The $U_{\text {iso }}(\mathrm{H})$ values were set at $1.2 U_{\mathrm{eq}}(\mathrm{C}$-aromatic, N$)$ and $1.5 U_{\mathrm{eq}}(C$-methyl $)$.

Figure 1
Molecular structure of the title compound, showing the atom labelling scheme. Displacement ellipsoids are drawn at the $50 \%$ probability level and H atoms are represented as small spheres of arbitrary radii (Symmetry code: (i) $-x+2,-y+2,-$ $z+1)$.

Figure 2
Molecular packing of the title compound with hydrogen bonding shown as dashed lines.

$\Delta \rho_{\text {min }}=-0.18 \mathrm{e}^{-3}$

## Special details

Geometry. All e.s.d.'s (except the e.s.d. in the dihedral angle between two 1.s. planes) are estimated using the full covariance matrix. The cell e.s.d.'s are taken into account individually in the estimation of e.s.d.'s in distances, angles and torsion angles; correlations between e.s.d.'s in cell parameters are only used when they are defined by crystal symmetry. An approximate (isotropic) treatment of cell e.s.d.'s is used for estimating e.s.d.'s involving l.s. planes.
Refinement. Refinement of $F^{2}$ against ALL reflections. The weighted $R$-factor $w R$ and goodness of fit $S$ are based on $F^{2}$, conventional $R$-factors $R$ are based on $F$, with $F$ set to zero for negative $F^{2}$. The threshold expression of $F^{2}>\sigma\left(F^{2}\right)$ is used only for calculating $R$-factors $(\mathrm{gt})$ etc. and is not relevant to the choice of reflections for refinement. $R$-factors based on $F^{2}$ are statistically about twice as large as those based on $F$, and $R$ - factors based on ALL data will be even larger.
