Received 13 June 2012; accepted 5 July 2012

Key indicators: single-crystal X-ray study; $T = 293\text{ K}$; mean $\sigma(\text{C}-\text{C}) = 0.005\text{ \AA}$; R factor = 0.064; wR factor = 0.191; data-to-parameter ratio = 15.9.

The asymmetric unit of the title compound, $\text{C}_{19}\text{H}_{19}\text{ClO}_4$, contains two independent molecules. The dihedral angles between the benzene rings are 63.41 (8) and 61.41 (9) $^\circ$. Adjacent molecules of different types are interconnected in pairs through $\pi-\pi$ interactions between their central benzene rings [centroid–centroid separation = 3.801 (2) \AA , interplanar spacing = 3.605 (2) \AA , centroid shift = 1.204 (2) \AA]. Finally, $\text{C}-\text{H}\cdots\text{O}$ hydrogen bonds link these dimers into bilayers parallel to (100).

Ethyl 2-[4-(2-chlorobenzoyl)-2,6-dimethylphenoxy]ethanoate

T. Prashanth, V. Lakshmi Ranganatha, M. K. Usha, Shaukath Ara Khanum, D. Revannasiddaiah, Sumati Anthal, Rajni Kant and Vivek K. Gupta

S1. Comment

Analogues of phenoxy ethanoic acid are considered to be very important compounds in the field of medicinal chemistry, and the compounds were found to have good antifungal activity against pathogenic fungi and posses moderate activity against gram negative bacteria in comparison to standard ciprofloxacin (Dahiya & Kaur 2007). Resent studies shows that changes in the chemical and stereoisomeric structures of phenoxy ethanoic acid alter peroxisome proliferation (Esbenshade *et al.*, 1990). The anti-inflammatory activity results revealed a significant anti-inflammatory activity (up to 63.4%, 62.0%, 64.1% and 62.5% edema inhibition, respectively), as compared to the standard drug diclofenac (67.0%). Pathological investigation has shown that the analogues of phenoxy ethanoic acid compounds have higher anti hyperlipidmeic effect and caused appropriate modulation in HDL levels and some compounds showed a good potential for obesity-associated hyperlipidemia (Khanum *et al.*, 2010).The phenoxy acetic acid analogues show very good antitumor activity on Ehrlich asites tumor cells (Prabhakar *et al.*, 2006) and also show the anti ulcerogenic activity, cyclooxygenase activity, anticonvulsant activity (Sudha *et al.*, 2003) and anti microbial activities (Ma *et al.*, 2011). We were interested in obtaining these type of compounds to evaluate their biological activity; for this purpose, the title compound, [4-(2-chlorobenzoyl)-2,6-dimethylphenoxy].ethanoic acid (I) was synthesized.

The asymmetric unit of (I) comprises two crystallographically independent molecules, A and B, respectively (Fig. 1). The geometry of both independent molecules indicates a high degree of similarity in terms of bond distances and angles. The average aromatic bond length in the phenyl ring is 1.381 (3) Å and 1.380 (3) Å for A, B, respectively. Remaining bond distances are within normal ranges (Allen *et al.*, 1987). The dihedral angle between the phenyl rings is 63.41 (8)° for molecule A and 61.41 (9)° for molecule B. Adjacent molecules of different type (A,B) are interconnected in pairs, through π - π interactions between their central phenyl rings (C1-C6) [centroid separation = 3.801 (2) Å, interplanar spacing = 3.605 Å, centroid shift = 1.204 Å]. Finally, C—H \cdots O hydrogen bonds (Table 1) link these dimeric entities into bilayered structures parallel to (100).

S2. Experimental

[4-(2-chlorobenzoyl)-2,6-dimethylphenoxy]ethanoic acid was obtained by refluxing a mixture of(2-Chloro-phenyl)-(4-hydroxy-3,5-dimethyl-phenyl)-methanone (1 g, 0.0038 mol) and ethyl chloroacetate (1.41 g, 0.011 mol) in dry acetone (50 ml) and anhydrous potassium carbonate (1.59 g, 0.0114 mol) for 14 hrs. The reaction mixture was cooled, and the solvent was removed by distillation. The residual mass was triturated with cold water to remove potassium carbonate, and extracted with ether (3 X 50 ml). The ether layer was washed with a 10% sodium hydroxide solution (3 X 50 ml), followed by water (3 X 30 ml), and then dried over anhydrous sodium sulfate and evaporated to dryness to obtain the product. Which on recrystallization with ethanol, gave [4-(2-chlorobenzoyl)-2,6-dimethylphenoxy]ethanoic acid with 85% yield. *M.p.* 70–72°C; IR (Nujol): 1745 (ester, C=O), 1665 cm⁻¹ (C=O); ¹H NMR (CDCl₃): δ 1.2 (t, *J* = 7 Hz, 3H,

CH₃ of ester), 2.3 (s, 6H, 2Ar-CH₃), 4.25 (q, *J* = 6 Hz, 2H, CH₂ of ester), 4.45 (s, 2H, OCH₂), 7.2–7.8 (bm, 6H, Ar—H). Anal. Cal. for C₁₉H₁₉ClO₄ (346.10): C, 65.80; H, 5.52; Found: C, 65.85; H, 5.58%.

S3. Refinement

All H atoms were positioned geometrically and were treated as riding on their parent C atoms, with C—H distances of 0.93–0.97 Å; and with *U*_{iso}(H) = 1.2*U*_{eq}(C), except for the methyl groups where *U*_{iso}(H) = 1.5*U*_{eq}(C).

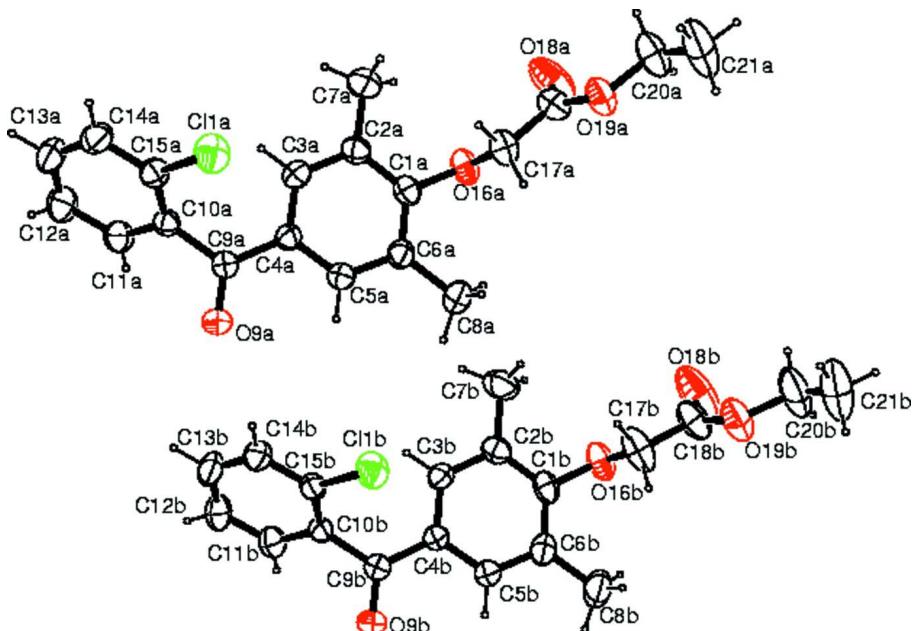

Figure 1

ORTEP view of the molecule with the atom-labeling scheme. The thermal ellipsoids are drawn at the 40% probability level. H atoms are shown as small spheres of arbitrary radii.

Special details

Experimental. CrysAlis PRO, Oxford Diffraction Ltd., Version 1.171.34.40 (release 27-08-2010 CrysAlis171.NET) (compiled Aug 27 2010, 11:50:40) Empirical absorption correction using spherical harmonics, implemented in SCALE3 ABSPACK scaling algorithm.

Geometry. All e.s.d.'s (except the e.s.d. in the dihedral angle between two l.s. planes) are estimated using the full covariance matrix. The cell e.s.d.'s are taken into account individually in the estimation of e.s.d.'s in distances, angles and torsion angles; correlations between e.s.d.'s in cell parameters are only used when they are defined by crystal symmetry. An approximate (isotropic) treatment of cell e.s.d.'s is used for estimating e.s.d.'s involving l.s. planes.

Refinement. Refinement of F^2 against ALL reflections. The weighted R -factor wR and goodness of fit S are based on F^2 , conventional R -factors R are based on F , with F set to zero for negative F^2 . The threshold expression of $F^2 > \sigma(F^2)$ is used only for calculating R -factors(gt) etc. and is not relevant to the choice of reflections for refinement. R -factors based on F^2 are statistically about twice as large as those based on F , and R -factors based on ALL data will be even larger.
