Received 12 June 2013; accepted 28 June 2013

Key indicators: single-crystal X-ray study; $T = 293\text{ K}$; mean $\sigma(\text{C}-\text{C}) = 0.004\text{ \AA}$; R factor = 0.047; wR factor = 0.141; data-to-parameter ratio = 12.9.

The title compound, $C_{23}H_{20}N_2O_6$, crystallizes with two molecules in the asymmetric unit in which the dihedral angles between the mean planes of the pyran and phenyl rings are 66.6 (1) and 61.9 (1)°. The fused pyrone and pyran rings each adopts a sofa conformation. In the crystal, C—H···O hydrogen bonds link the molecules, forming a two-dimensional network parallel to [001].

S1. Comment

Coumarin derivatives show strong activity against cancer cell lines (Kawaii *et al.*, 2001) and exhibit monoamine oxidase inhibitory activity (Hossain *et al.*, 1996). Antiulcer activity of some naturally occurring pyranocoumarins has been reported (Goel *et al.*, 1997). They also show anti-hepatitis B virus, anti-filarial (Casley-Smith *et al.*, 1993) and cytotoxic activities (Su *et al.*, 2009) and anti-TB activity (Xu *et al.*, 2006). One natural source coumarin derivative, Chalepin, inhibits the glyceraldehyde-3-phosphate dehydrogenase of parasites (Protein Data Bank ID code 1 K3T) (Pavao *et al.*, 2002). Herein, we report on the crystal structure of the title coumarin derivative.

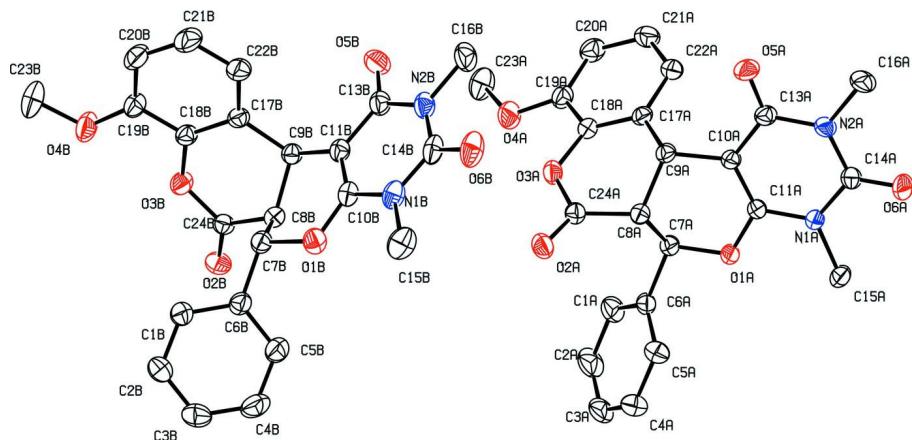

We have already reported a similar compound (Jagadeesan *et al.*, 2013). The title compound crystallizes with two molecules in the asymmetric unit. Geometrical parameters are almost similar the title compound and the previously reported structure. The six-membered pyrone and pyran rings adopt a sofa conformation. The dihedral angle between the mean planes of the pyran and phenyl rings is 66.6 (1) ° and 61.9 (1) ° for the molecule A and B respectively. The crystal packing is stabilized by C—H···O intermolecular hydrogen bonds (Fig. 2 and Table 1).

S2. Experimental

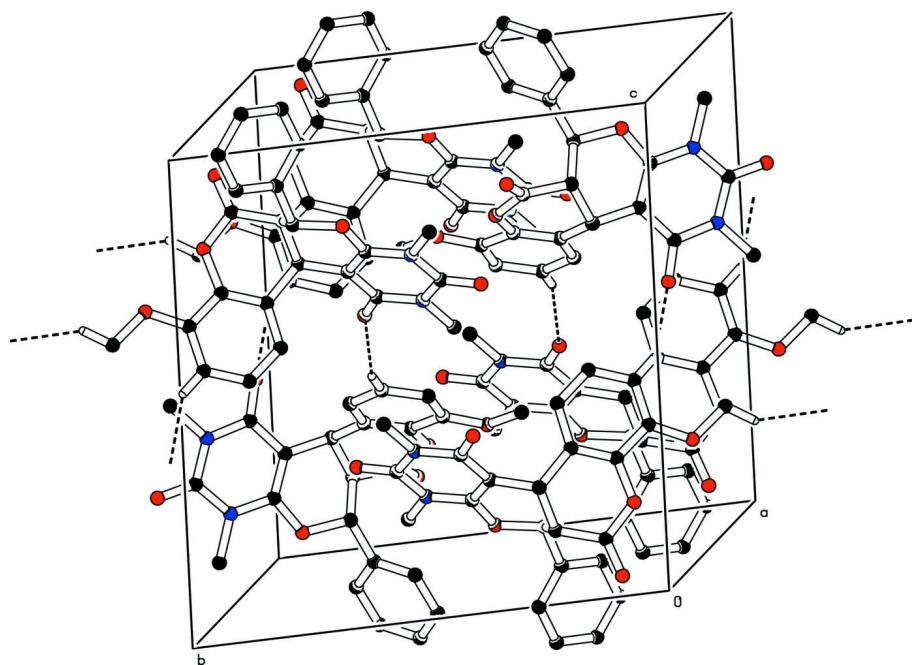

A mixture of 2-ethoxy-6-formylphenyl (2E)-but-2-enoate (0.234 g, 1 mmol) and *N,N*-dimethylbarbituric acid (0.156 g, 1 mmol) was placed in a round bottom flask and melted at 180 °C for 1 h. After completion of the reaction as indicated by TLC, the crude product was washed with 5 ml of ethylacetate and hexane mixture (1:49 ratio) which successfully provided the pure product in 90% yield as colorless solid. Diffraction quality crystals were obtained by slow evaporation of a solution in (Methonal and ethanol)6:4 ratio.

S3. Refinement

H atoms (except H7A, H7B, H8A, H8B, H9A and H9B atom which were freely refined) were refined with fixed individual displacement parameters [$U(H) = 1.2 U_{eq}(C)$] using a riding model with C—H ranging from 0.93 Å to 0.97 Å. The methyl groups bonded to N were refined as disordered over two equally occupied sites rotated by 60 degrees.

**Figure 1**

The molecular structure of the title compound. Displacement ellipsoids are drawn at the 30% probability level, H atoms have been omitted for clarity.

**Figure 2**

Crystal packing of the title compound. Hydrogen bonds are shown as dashed lines. For the sake of clarity, H atoms not involved in the interactions have been omitted.

Extinction coefficient: 0.0041 (7)

Special details

Geometry. All e.s.d.'s (except the e.s.d. in the dihedral angle between two l.s. planes) are estimated using the full covariance matrix. The cell e.s.d.'s are taken into account individually in the estimation of e.s.d.'s in distances, angles and torsion angles; correlations between e.s.d.'s in cell parameters are only used when they are defined by crystal symmetry. An approximate (isotropic) treatment of cell e.s.d.'s is used for estimating e.s.d.'s involving l.s. planes.

Refinement. Refinement of F^2 against ALL reflections. The weighted R -factor wR and goodness of fit S are based on F^2 , conventional R -factors R are based on F , with F set to zero for negative F^2 . The threshold expression of $F^2 > \sigma(F^2)$ is used only for calculating R -factors(gt) etc. and is not relevant to the choice of reflections for refinement. R -factors based on F^2 are statistically about twice as large as those based on F , and R -factors based on ALL data will be even larger.
