

Supplementary Material

Due to a recent re-assembly of the *Desulfitobacterium hafniense* DCB-2 genome, a number of database reference identifiers including the locus name for the Dhaf4260 protein have changed. Several databases of derived data have not yet been updated and still reference the old identifiers. Supplementary Table S1 is provided to help clarify the relationship between these identifiers. The UniProt Archive database (UniParc) can be useful when resolving obsolete names to existing sequences. In this case, the UniParc id is UPI0000540F56 and can be accessed via the <http://www.uniprot.org/uniparc/UPI0000540F56> URL.

Supplementary Table S1. Current and obsolete database and locus identifiers for the Dhaf4260 protein.

UniProtKB	RefSeq	Locus./ ORF Name	EMBL / Genbank	Status	Effective Dates
B8FUJ5	YP_002460701	Dhaf_4260	ACL22265	Current	Jan-2009 to present
Q18YZ7	ZP_01370078	Dhaf_3308	EAT53660	Obsolete	Jul-2006 to Jan-2009
Q422F5	ZP_00559375	DhafDRAFT_1477	EAM96800	Obsolete	Jul-2005 to Jul-2006
