The structure of dickite: correction

Errors occur in the above article by R. E. Newnham & G. W. Brindley (Acta Cryst. (1956), 9, 759). In Table 4 the refined $x/a$ coordinates should read 0.273 in place of 0.263 for atom O$_2$, and 0.763 in place of 0.773 for atom O$_3$.

The Si-O distances of Table 6 have been re-checked by the authors and differ slightly from those given previously. The amended values are:

- $\text{Si}_1-\text{O}_1$: 1.61 Å  
- $\text{Si}_1-\text{O}_2$: 1.64 Å  
- $\text{Si}_1-\text{O}_3$: 1.62 Å  
- $\text{Si}_1-\text{O}_4$: 1.62 Å

Average Si-O, 1.635 Å

Crystallographic calculations on the high-speed digital computer SWAC: correction

An error occurs in equation (19) of the above paper by R. A. Sparks, R. J. Prosen, F. H. Kruse & K. N. Trueblood (Acta Cryst. (1956), 9, 350): only the numerator of the right side of the equation should be raised to the power 0.5. Thus the equation should read:

$$\frac{1}{L} = \frac{\gamma (\sin^2 \theta - \sin^4 \theta)}{1 - 2 (\sin^2 \theta - \sin^4 \theta)} \cdot$$
