The Crystallographic Literacy Group will be presenting the further steps that have been taken towards disseminating crystallographic knowledge to the wider scientific community. We will be highlighting the web portal and video submissions that are present on the website. We are encouraging scientists from all levels of crystallographic experience to participate in contributing, and especially in submitting and reviewing submissions to the website. Cash prizes are offered to younger scientists for your contribution! Please note submissions are peer-reviewed and can be used to enhance your resume.
