More scientific papers than ever are being published but you may be wondering how to get your paper submitted and accepted for publication, especially if you are an early career researcher.

This presentation aims to provide help and advice for publishing your crystallography results. It covers what you need to do before you submit your paper, including how to prepare your article and what to do with your data. It explains what happens in the review process and how to let everyone know about your article once it has been published. It is full of hints and tips and gives some ideas on how you can get more involved in the publishing process.
