

Book Reviews

Works intended for notice in this column should be sent direct to the Book-Review Editor (R. F. Bryan, Department of Chemistry, University of Virginia, McCormick Road, Charlottesville, Virginia 22901, USA). As far as practicable, books will be reviewed in a country different from that of publication.

Acta Cryst. (1997). **B53**, 1027

Books Received

The following books have been received by the Editor. Brief and generally uncritical notices are given of works of marginal crystallographic interest; occasionally, a book of fundamental interest is included under this heading because of difficulty in finding a suitable reviewer without great delay.

Organic molecular crystals: interaction, localization and transport phenomena. By EDWARD A. SILINSH and VLADISLAV ČÁPEK. Pp. xxiv + 402. Oxford: Oxford University Press/American Institute of Physics, 1994. Price £48.00. ISBN 1-56396-069-9. A review of this book, by Robin M. Hochstrasser, has been published in the November 1997 issue of *Acta Crystallographica Section A*, page 855.

Physics and chemistry at oxide surfaces. By CLAUDINE NOGUERA. Pp. xv + 223. Cambridge: Cambridge University Press, 1996. Price £40.00 (US \$64.95). ISBN 0 521 47214 8. A review of this book, by Nicholas M. Harrison, has been published in the November 1997 issue of *Acta Crystallographica Section A*, pages 855–856.

Synchrotron radiation techniques in industrial, chemical, and materials science. Edited by K. L. D'AMICO, L. J. TERMINELLO & D. K. SHUH. Pp. viii + 259. New York: Plenum Publishing Corporation, 1996. Price US \$89.50. ISBN 0-306-45389-4. This volume contains the proceedings of two American Chemical Society symposia (Washington, DC, August 1994 and Chicago, IL, August 1995) devoted to the title topic. The intent of these symposia was 'to present a broad overview of several current topics in industrial, chemical, and materials-based SR research to a chemically inclined audience'.
