The structure of ethyl 5,6,7,8,9-pentaacetoxy-2-amino-4-nitromethyl-D-glycero-D-manno-2-nonene-3-carboxylate, C₂₃H₃₄N₂O₁₄: erratum. By R. VEGA, M. J. DIÁNEZ, A. LÓPEZ-CASTRO and R. MÁRQUEZ, *Departamento de Óptica y Sección de Física del Departamento de Investigaciones Físicas y Químicas del CSIC, Universidad de Sevilla, Spain*

(Received 11 March 1985; accepted 29 April 1985)

Abstract

An error in the name of the title compound of the paper by Vega, Diánez, López-Castro & Márquez [*Acta Cryst.* (1984), **C40**, 1941–1944] is corrected. The correct name is ethyl

0108-2701/85/081280-01\$01.50

(*Z*)-5,6,7,8,9-pentaacetoxy-2-amino-4-nitromethyl-D-glycero-D-ido-2-nonene-3-carboxylate. Thus, throughout the text *D-glycero-D-manno* should read *D-glycero-D-ido*

All relevant information is given in the *Abstract*.

Reporting an Absolute-Configuration Determination

A structural paper reporting an absolute-configuration determination should, if practicable, also report a chiral property of the source material which can be linked uniquely to the structural handedness. If such a linkage is not made, the result should be reported only as a determination of

structural handedness or chirality. Should the source material be a product of reactions with condition-dependent stereospecificity, the experimental conditions of the preparation should be given or referenced and a linkage made between the claimed stereospecificity and the structure. In the event that a linkage cannot be made, a disclaimer is necessary stating that the structural handedness may not be representative of the bulk material.
