## Ethyl 1-benzyl-4-hydroxy-2-methyl-5-oxopyrrolidine-3-carboxylate

Graeme J. Gainsford* and Jennifer M. Mason

Industrial Research Limited, PO Box 31-310, Lower Hutt, New Zealand Correspondence e-mail: g.gainsford@irl.cri.nz

Received 19 March 2010; accepted 23 March 2010

Key indicators: single-crystal X-ray study; $T=93 \mathrm{~K}$; mean $\sigma(\mathrm{C}-\mathrm{C})=0.009 \AA ; R$ factor $=$ $0.049 ; w R$ factor $=0.138$; data-to-parameter ratio $=16.3$.

In the title oxopyrrolidine, $\mathrm{C}_{15} \mathrm{H}_{19} \mathrm{NO}_{4}$, the five-membered pyrrolidine ring is in a twist conformation and its mean plane makes an angle of 89.2 (3) ${ }^{\circ}$ with the phenyl ring. In the crystal, molecules pack as dimers via strong $\mathrm{O}-\mathrm{H} \cdots \mathrm{O}\left[R_{2}^{2}(10)\right]$ interactions cross-linked by weaker $\mathrm{C}-\mathrm{H} \cdots \mathrm{O}$ and $\mathrm{C}-\mathrm{H} \cdots \pi$ interactions. Full synthetic and spectroscopic details are given for the title compound and related dicarboxylates.

## Ethyl 1-benzyl-4-hydroxy-2-methyl-5-oxopyrrolidine-3-carboxylate <br> Graeme J. Gainsford and Jennifer M. Mason

## S1. Comment

The title oxopyrrolidine (I) (see Fig 3) was prepared as part of a programme to elucidate the structure-activity relationships of the Immucillin family of potent purine nucleoside phosphorylase inhibitors (Mason et al., 2007; Edwards et al., 2009, Clinch et al., 2009). Cycloaddition of the nitrone formed from $N$-benzyl hydroxylamine and acetaldehyde to diethyl maleate forms racemic, isomeric, isoxazolidine dicarboxylates II and III in 3:1 ratio. Reductive cleavage of the major isomer(II) with zinc was accompanied by spontaneous lactam formation to give the crystalline racemic pyrrolidine (I): the $\left(2 R^{*}, 3 R^{*}, 4 S^{*}\right)$ isomer in shown in Figure 1.

The asymmetric unit of (I), Fig 1, contains one independent ethyl-1-benzyl-4-hydroxy-2-methyl-5-oxopyrrolidine-3carboxylate (I) molecule. The five-membered ring (i.e. N1,C5-C2) is in a twist conformation on $\mathrm{C} 2-\mathrm{C} 3$ with $\mathrm{Q}(2)$ $0.260(7) \AA$ and $\varphi 236.4(14)^{\circ}$ (Cremer \& Pople, 1975). Its mean plane makes an angle of $89.2(3)^{\circ}$ with the planar phenyl ring (C10-C15). Distances and angles are similar to those observed before in the related $N$-bis(phenylmethyl)-2pyrrolydinecarboxamide adduct QECBOP (Snider et al., 2000). Lattice binding is provided principally by $\mathrm{O}-\mathrm{H} \cdots \mathrm{O}$ [motif $R_{2}{ }^{2}(10)$, Bernstein et al., 1995] interactions, shown in Figure 2; these are supported by cross-linking weaker $\mathrm{C}-\mathrm{H} \cdots \mathrm{O}$ and (one) $\mathrm{C}-\mathrm{H} \cdots \pi$ interactions (Table 1).

## S2. Experimental

( $3 S^{*}, 4 S^{*}, 5 R^{*}$ )-Diethyl 2-benzyl-3-methylisoxazolidine-4,5-dicarboxylate (II) and ( $3 R^{*}, 4 S^{*}, 5 R^{*}$ )-Diethyl 2-benzyl-3-methylisoxazolidine-4,5-dicarboxylate (III). Acetaldehyde ( $0.90 \mathrm{ml}, 16.0 \mathrm{mmol}$ ) was added to a stirred suspension of N benzyl hydroxylamine ( $1.8 \mathrm{~g}, 14.6 \mathrm{mmol}$ ) in toluene. After 10 min diethyl maleate ( $2.14 \mathrm{ml}, 13.3 \mathrm{mmol}$ ) was added and the solution heated to $90^{\circ} \mathrm{C}$ for 2 h . After cooling the solution was extracted with water, dried and concentrated under reduced pressure. Chromatography of the residue on a column of silica gel eluted with 20 and $25 \%$ EtOAc in hexanes gave first (II) ( $1.6 \mathrm{~g}, 4.98 \mathrm{mmol}, 38 \%$ ) and then (III) ( $0.53 \mathrm{~g}, 1.7 \mathrm{mmol}, 12 \%$ ) as colourless syrups. (II) ESI- MS $\mathrm{C}_{17} \mathrm{H}_{24} \mathrm{NO}_{5}[\mathrm{M}+\mathrm{H}]^{+}$calcd 322.1654, found 322.1638. (III)ESI- $\mathrm{MS} \mathrm{C}_{17} \mathrm{H}_{24} \mathrm{NO}_{5}[\mathrm{M}+\mathrm{H}]^{+}$calcd 322.1654, found 322.1666.
$\left(2 S^{*}, 3 S^{*}, 4 R^{*}\right)$-Ethyl 1-benzyl-4-hydroxy-2-methyl-5-oxopyrrolidine -3-carboxylate(I): Zinc dust ( $0.52 \mathrm{~g}, 8.1 \mathrm{mmol}$ ) was added to a solution of $\left(3 S^{*}, 4 S^{*}, 5 R^{*}\right)$-diethyl 2-benzyl-3-methylisoxazolidine-4,5-dicarboxylate (II) ( $1.3 \mathrm{~g}, 4.1 \mathrm{mmol}$ ) in acetic acid ( 40 ml ). The resulting suspension was stirred overnight and then filtered and concentrated to dryness under reduced pressure. The residue was partitioned between EtOAc and aqueous potassium carbonate (10\%). The organic phase was dried and concentrated under reduced pressure. Chromatography of the residue on a column of silica gel eluted with 50-75\% EtOAc in hexanes gave the title compound (I) ( $0.63 \mathrm{~g}, 56 \%$ ). Elemental Analysis (\%): calcd C 64.97, H 6.91 , N 5.05 , found C 64.89 , H 6.84, N 5.03. Mp (EtOAc-hexanes) $85.9-86.1^{\circ} \mathrm{C}$. ESI- $\mathrm{MS} \mathrm{C}_{15} \mathrm{H}_{19} \mathrm{NO}_{4} \mathrm{Na}[\mathrm{M}+\mathrm{Na}]^{+}$calcd 300.1212 , found 300.1216 .

For full details of ${ }^{1} \mathrm{H}$ and ${ }^{13} \mathrm{C}$ NMR of compounds (I), (II) \& (III) see Special Details in the supplementary data.

## S3. Refinement

The weighting scheme was chosen after the predicted SHELXL parameters gave a significantly poorer distribution of errors over the dataset. The H atom of the ordered hydroxyl group was placed in the position indicated by a difference electron density map and its positions allowed to refine with $\mathrm{U}_{\mathrm{iso}}(\mathrm{H})=1.2 \mathrm{U}_{\mathrm{eq}}(\mathrm{O})$. The methyl H atoms were constrained to an ideal geometry $\left(\mathrm{C}-\mathrm{H}=0.98 \AA\right.$ ) with $\mathrm{U}_{\mathrm{iso}}(\mathrm{H})=1.5 \mathrm{U}_{\mathrm{eq}}(\mathrm{C})$, but were allowed to rotate freely about the adjacent $\mathrm{C}-$ C bonds. All other H atoms were placed in geometrically idealised positions and constrained to ride on their parent atoms with $\mathrm{C}-\mathrm{H}$ distances of 0.95 (aromatic) or 0.99 (methylene) $\AA$ with $\mathrm{U}_{\mathrm{iso}}(\mathrm{H})=1.2 \mathrm{U}_{\mathrm{eq}}(\mathrm{C})$. Two low angle reflections were omitted from the final cycles of refinement because their observed intensities were much lower than the calculated values as a result of being partially obscured by the beam stop. Five other reflections were identified as outliers and removed from refinement. The crystals were minute in one direction, barely adequate but enough data was measured to solve the structure which met the chemical requirement for the study.

(III) $\left(3 R^{*}, 4 S^{*}, 5 R^{*}\right)$-Diethyl 2-benzyl-3-methylisoxazolidine-4,5-dicarboxylate ${ }^{1} \mathrm{H}$ NMR ( $300 \mathrm{MHz}, \mathrm{CDCl}_{3}, \mathrm{TMS}$ ) $\delta$ $7.52-7.21(\mathrm{~m}, 5 \mathrm{H}), 4.74(\mathrm{~d}, J=9.2 \mathrm{~Hz}, 1 \mathrm{H}), 4.32-4.05(\mathrm{~m}, 5 \mathrm{H}), 3.95(\mathrm{~d}, J=14.3 \mathrm{~Hz}, 1 \mathrm{H}), 3.85(\mathrm{dd}, J=7.6,9.1 \mathrm{~Hz}, 1 \mathrm{H})$, $3.30(\mathrm{~m}, 1 \mathrm{H}), 1.86-1.11(\mathrm{~m}, 9 \mathrm{H}) .{ }^{13} \mathrm{C}$ NMR $\left(\mathrm{CDCl}_{3}, 75.5 \mathrm{MHz}\right.$, centre line of solvent 77.4 ppm$)$ 170.1, 169.5, 136.7, 129.3. 128.6, 127.7, 76.2, 62.6, 61.6, 61.4, 59.6, 55.1, 14.6, 14.4.

Geometry. All esds (except the esd in the dihedral angle between two l.s. planes) are estimated using the full covariance matrix. The cell esds are taken into account individually in the estimation of esds in distances, angles and torsion angles; correlations between esds in cell parameters are only used when they are defined by crystal symmetry. An approximate (isotropic) treatment of cell esds is used for estimating esds involving l.s. planes.
Refinement. Refinement of $F^{2}$ against ALL reflections. The weighted $R$-factor wR and goodness of fit $S$ are based on $F^{2}$, conventional $R$-factors $R$ are based on $F$, with $F$ set to zero for negative $F^{2}$. The threshold expression of $F^{2}>\sigma\left(F^{2}\right)$ is used only for calculating $R$-factors(gt) etc. and is not relevant to the choice of reflections for refinement. $R$-factors based on $F^{2}$ are statistically about twice as large as those based on $F$, and $R$ - factors based on ALL data will be even larger.
