## 1-(4-Chlorophenyl)-3-(2-thienylcarbonyl)thiourea

Sohail Saeed, ${ }^{\text {a }}{ }^{\text {* Naghmana Rashid }}{ }^{\text {a }}$ and Wing-Tak Wong ${ }^{\text {b }}$<br>${ }^{\text {a }}$ Department of Chemistry, Research Complex, Allama Iqbal Open University, Islamabad, Pakistan, and ${ }^{\text {b }}$ Department of Applied Biology and Chemical Technology, The Hong Kong Polytechnic University, Hung Hom, Kowloon, Hong Kong SAR, People's Republic of China<br>Correspondence e-mail: sohail262001@yahoo.com

Received 22 March 2010; accepted 14 April 2010
Key indicators: single-crystal X-ray study; $T=300 \mathrm{~K}$; mean $\sigma(\mathrm{C}-\mathrm{C})=0.003 \AA$; $R$ factor $=0.038 ; w R$ factor $=0.107$; data-to-parameter ratio $=18.0$.

The title compound, $\mathrm{C}_{12} \mathrm{H}_{9} \mathrm{ClN}_{2} \mathrm{OS}_{2}$, exists in the thioamide form with an intramolecular $\mathrm{N}-\mathrm{H} \cdots \mathrm{O}$ hydrogen bond across the thiourea and the carbonyl group. The dihedral angle between the rings is $10.36(11)^{\circ}$. In the crystal structure, molecules are linked into chains by weak intermolecular C $\mathrm{H} \cdots \mathrm{Cl}$ hydrogen-bonding interactions.

Sohail Saeed, Naghmana Rashid and Wing-Tak Wong

## S1. Comment

Thiourea and its derivatives are an important class of organic compounds in which sulfur is the major ligand atom which plays an important role in coordination chemistry with transition metals. Thiourea and its derivatives have found extensive applications in the fields of medicine, agriculture and analytical chemistry. Thioureas are also known to exhibit a wide range of biological activities including anticancer (Saeed et al., 2010), antifungal (Saeed et al., 2008), antiviral, antibacterial, anti-tubercular, anti-thyroidal, herbicidal and insecticidal activities, organocatalyst (Gu et al., 2007) and as agrochemicals (Xu et al., 2004).
The 4-chlorophenyl ring is slightly twisted $\left\{15.04(8)^{\circ}\right\}$ from the thiourea plane. The thioureido group is also slightly twisted $\left\{5.0(1)^{\circ}\right\}$ from the thiophene ring plane of S2/C9/C10/C11/C12. The molecular packing (Fig. 2) exhibits the thioamide form with an intramolecular $\mathrm{N}-\mathrm{H} \cdots \mathrm{O}$ hydrogen bond across the thiourea system, with a $\mathrm{N} 1-\mathrm{H} 1 \mathrm{~N} \cdots \mathrm{O} 1$ (Table 1). The crystal packing (Fig. 2) is stabilized by weak intermolecular $\mathrm{C}-\mathrm{H} \cdots \mathrm{Cl}$ hydrogen bonds between the thiophene H atom and the chlorine of an adjacent molecule, with a $\mathrm{C} 12-\mathrm{H} 12 \cdots \mathrm{Cl} 1^{\mathrm{i}}$ (Table 1).

## S2. Experimental

A solution of 2-thiophenecarbonyl chloride $(0.01 \mathrm{~mol})$ in anhydrous acetone $(80 \mathrm{ml})$ was added dropwise to a suspension of ammonium thiocyanate $(0.01 \mathrm{~mol})$ in anhydrous acetone $(50 \mathrm{ml})$ and the reaction mixture was refluxed for 50 minutes. After cooling to room temperature, a solution of 4-chloroaniline ( 0.01 mol ) in dry acetone ( 25 ml ) was added and the resulting mixture refluxed for 2 h . The reaction mixture was poured into five times its volume of cold water, upon which the thiourea precipitated. The product was recrystallized from ethanol as white block crystals.

## S3. Refinement

The H atoms bound C atoms were located from difference Fourier map and refined freely. All H atoms of C atoms were positioned geometrically and refined using a riding model, with $\mathrm{C}-\mathrm{H}=0.93 \AA$ for aryl and thiophenyl H atoms. $U_{\text {iso }}(\mathrm{H})=$ $1.2 U_{\text {eq }}(\mathrm{C})$ for aryl thiophenyl H atoms.

Figure 1
The molecular structure of the title compound with the atom numbering scheme. Displacement ellipsoids are drawn at the $30 \%$ probability level. H atoms are presented as a small spheres of arbitrary radius.

Figure 2
$\mathrm{N}-\mathrm{H} \cdots \mathrm{O}$ and $\mathrm{C}-\mathrm{H} \cdots \mathrm{Cl}$ interactions (dotted lines) in the crystal structure of the title compound. [Symmetry codes: (i) $x$ $5 / 2,-y+1 / 2, z-1 / 2$ (ii) $x+5 / 2,-y+1 / 2, z+1 / 2$.]

```

## Special details

Geometry. All esds (except the esd in the dihedral angle between two l.s. planes) are estimated using the full covariance matrix. The cell esds are taken into account individually in the estimation of esds in distances, angles and torsion angles; correlations between esds in cell parameters are only used when they are defined by crystal symmetry. An approximate (isotropic) treatment of cell esds is used for estimating esds involving l.s. planes.
Refinement. Refinement of $\mathrm{F}^{2}$ against ALL reflections. The weighted R -factor $w R$ and goodness of fit S are based on $\mathrm{F}^{2}$, conventional $R$-factors $R$ are based on $F$, with $F$ set to zero for negative $F^{2}$. The threshold expression of $F^{2}>2 \operatorname{sigma}\left(\mathrm{~F}^{2}\right)$ is used only for calculating R-factors(gt) etc. and is not relevant to the choice of reflections for refinement. R-factors based on $\mathrm{F}^{2}$ are statistically about twice as large as those based on F , and R - factors based on ALL data will be even larger.
