Received 21 July 2010; accepted 22 July 2010
Key indicators: single-crystal X-ray study; $T=100 \mathrm{~K}$; mean $\sigma(\mathrm{C}-\mathrm{C})=0.003 \AA$; $R$ factor $=0.037 ; w R$ factor $=0.094$; data-to-parameter ratio $=10.3$.

The title compound, $\mathrm{C}_{10} \mathrm{H}_{8} \mathrm{O}_{4}$, is one of the coumarins existing in Morinda citrifolia L (Noni). The chromenone ring system is approximately planar with a maximum deviation of 0.0208 (14) $\AA$. The methoxy group does not deviate from this plane $\left[\mathrm{C}-\mathrm{O}-\mathrm{C}-\mathrm{C}\right.$ torsion angle $\left.=-1.5(3)^{\circ}\right]$, indicating that the whole molecule is almost planar. In the crystal packing, intermolecular $\mathrm{O}-\mathrm{H} \cdots \mathrm{O}$ hydrogen bonds link the molecules into chains. These are further connected by $\mathrm{C}-\mathrm{H} \cdots \mathrm{O}$ hydrogen bonds.

## 7-Hydroxy-6-methoxy-2H-chromen-2-one

Hooi-Kheng Beh, Zhari Ismail, Mohd Zaini Asmawi, Wan-Sin Loh and Hoong-Kun Fun

## S1. Comment

Morinda citrifolia L (Noni) has been used in folk remedies by Polynesians for over 2000 years (Wang et al., 2002). 7-Hy-droxy-6-methoxy-2H-chromen-2-one (Scopoletin), a yellow to beige crystalline powder, is one of the coumarins present in Morinda citrifolia. The reference (Samoylenko et al., 2006) suggested Scopoletin as a marker constituent for quality control of Noni. This compound is reported to have a broad range of therapeutic effects including antimicrobial (Silva et al., 2001; Goy et al., 1993), antitumor (Cassady et al., 1979), antioxidant (Shaw et al., 2003), anti-inflammatory (Ding et al., 2008) properties.
In the title compound, Fig. 1, the chromenone ring system ( $\mathrm{C} 1-\mathrm{C} 9 / \mathrm{O} 1 / \mathrm{O} 2$ ) is approximately planar with a maximum deviation of $0.0208(14) \AA$ at atom C5. This mean plane forms a dihedral angle of $1.67(8)^{\circ}$ with the methoxy group ( $\mathrm{O} 4 / \mathrm{C} 10$ ) attached to it, indicating that the whole molecule is almost planar.
In the crystal packing, Fig. 2, intermolecular $\mathrm{O} 3-\mathrm{H} 1 \mathrm{O} 3 \cdots \mathrm{O} 2$ and $\mathrm{C} 5-\mathrm{H} 5 \mathrm{~A} \cdots \mathrm{O} 2$ hydrogen bonds (Table 1) link the molecules into two-dimensional planes parallel to $b c$ plane.

## S2. Experimental

The raw materials of Morinda citrifolia were collected from Kampung Seronok, Penang, Malaysia. A voucher specimen (No. 10612) has been deposited at the herbarium of the School of Biological Sciences, Universiti Sains Malaysia. The plant samples were cleaned with water and dried in oven at $55^{\circ} \mathrm{C}$ for 3 days. The dried powdered fruit of Morinda citrifolia was repeatedly extracted by soxhlet extractor by using fresh methanol for 5 days. The pooled methanol extracts were evaporated to yield $18.0 \%$ residue. A portion of these methanolic extracts was reconstituted in distilled water and partitioned sequentially with equal volume of chloroform $\left(\mathrm{CHCl}_{3}\right)$, ethyl acetate (EA) and n-butanol (BuOH). The eluates were dried to yield $11.1 \%, 9.0 \%, 20.2 \%$ of $\mathrm{CHCl}_{3}$ fraction, EA fraction and BuOH fraction respectively. The $\mathrm{CHCl}_{3}$ fraction was subjected to column chromatography and was eluted sequentially with of petroleum ether, petroleum etherchloroform mixtures (99:1, $95: 5,90: 10,85: 15 ; 80: 20,75: 25,70: 30,65: 35,60: 40,55: 45,50: 50,40: 60,30: 70,20: 80$, 10:90), chloroform and chloroform-methanol mixtures (99:1, 95:5, 90:10, 85:15; 80:20, 75:25, 70:30, 65:35, 60:40, $55: 45,50: 50,40: 60,30: 70,20: 80,10: 90$ ) and methanol. Fractions eluted from the petroleum ether-chloroform mixture ( $90: 10$ ) yielded a yellowish-orange amorphous powder ( 82.5 mg ). Yellow colour crystals suitable for X-ray crystallography were obtained upon repeated recrystallization with chloroform. The molecular weight of the titled compound found to be 192 and the melting point is $477-479 \mathrm{~K}$.

## S3. Refinement

The H atom bonded to O was located from a difference Fourier map and was refined freely $[\mathrm{O}-\mathrm{H}=0.92(3) \AA]$. The remaining H atoms were positioned geometrically $[\mathrm{C}-\mathrm{H}=0.93$ or $0.96 \AA$ ] and were refined using a riding model, with $U_{\text {iso }}(\mathrm{H})=1.2$ or $1.5 U_{\mathrm{eq}}(\mathrm{C})$. A rotating group model was applied to the methyl group. In the absence of significant
anomalous dispersion, 879 Friedel pairs were merged for the final refinement.

Figure 1
The molecular structure of the title compound, showing $50 \%$ probability displacement ellipsoids and the atom-numbering scheme.

Figure 2
The crystal packing of the title compound, viewed along the $a$ axis, showing the two-dimensional planes. Intermolecular interactions are shown as dashed lines. H atoms not involved in the intermolecular interactions (dashed lines) have been omitted for clarity.

```

## Special details

Experimental. The crystal was placed in the cold stream of an Oxford Cryosystems Cobra open-flow nitrogen cryostat (Cosier \& Glazer, 1986) operating at 100.0 (1) K.
Geometry. All e.s.d.'s (except the e.s.d. in the dihedral angle between two 1.s. planes) are estimated using the full covariance matrix. The cell e.s.d.'s are taken into account individually in the estimation of e.s.d.'s in distances, angles and torsion angles; correlations between e.s.d.'s in cell parameters are only used when they are defined by crystal symmetry. An approximate (isotropic) treatment of cell e.s.d.'s is used for estimating e.s.d.'s involving l.s. planes.
Refinement. Refinement of $F^{2}$ against ALL reflections. The weighted $R$-factor $w R$ and goodness of fit $S$ are based on $F^{2}$, conventional $R$-factors $R$ are based on $F$, with $F$ set to zero for negative $F^{2}$. The threshold expression of $F^{2}>\sigma\left(F^{2}\right)$ is used only for calculating $R$-factors(gt) etc. and is not relevant to the choice of reflections for refinement. $R$-factors based on $F^{2}$ are statistically about twice as large as those based on $F$, and $R$ - factors based on ALL data will be even larger.
