## 4,4'-[Oxalylbis(azanediyl)]dipyridinium bis(perchlorate)

Wayne Hsu, Hui-Lin Hsiao and Jhy-Der Chen*<br>Department of Chemistry, Chung-Yuan Christian University, Chung-Li, Taiwan Correspondence e-mail: jdchen@cycu.edu.tw

Received 14 October 2010; accepted 15 October 2010

Key indicators: single-crystal X-ray study; $T=295 \mathrm{~K}$; mean $\sigma(\mathrm{C}-\mathrm{C})=0.005 \AA$; $R$ factor $=0.051 ; w R$ factor $=0.119 ;$ data-to-parameter ratio $=11.4$.

In the title molecular salt, $\mathrm{C}_{12} \mathrm{H}_{12} \mathrm{~N}_{4} \mathrm{O}_{2}{ }^{2+} \cdot 2 \mathrm{ClO}_{4}{ }^{-}$, the complete cation is generated by crystallographic inversion symmetry. In the crystal, the cations and anions are linked via $\mathrm{N}-\mathrm{H} \cdots \mathrm{O}$ and $\mathrm{N}-\mathrm{H} \cdots(\mathrm{O}, \mathrm{O})$ hydrogen bonds, forming a three-dimensional framework.

## 4,4'-[Oxalylbis(azanediyl)]dipyridinium bis(perchlorate)

Wayne Hsu, Hui-Lin Hsiao and Jhy-Der Chen

## S1. Comment

Several $\mathrm{Ag}(\mathrm{I})$ complexes containg $N, N^{\prime}$-bis(2-pyridyl)oxamide ligands have been prepared, which show one-dimensional and two-dimensional structures (Hsu, et al., 2004; Hu, et al., 2004). To investigate the effect of ligand-isomerism on the structural type of such complexes, the ligand $N, N^{\prime}$-bis(4-pyridyl)oxamide was synthesized and reacted with $\mathrm{AgClO}_{4}$ in $\mathrm{CH}_{2} \mathrm{Cl}_{2}$. The reaction resulted unexpectedly in the perchlorate salt of the organic ligand. Within this project the crystal structure of the title compound was determined.

## S2. Experimental

$N, N^{\prime}$-bis(4-pyridyl)oxamide $(0.24 \mathrm{~g}, 1.0 \mathrm{mmol})$ and $\mathrm{AgClO}_{4}(0.21 \mathrm{~g}, 1.0 \mathrm{mmol})$ were placed in a flask containing 10 ml $\mathrm{CH}_{2} \mathrm{Cl}_{2}$. The mixture was then reflux for 12 h . The resulting solution was then filtered and then layered with diethyl ether to afford coloress plate crystals of the title compound suitable for X-ray crystallography.

## S3. Refinement

All the hydrogen atoms were placed in idealized positions and refined using the riding model approximation with $C-\mathrm{H}=$ $0.93-0.96 \AA, \mathrm{~N}-\mathrm{H}=0.86 \AA$ and $U_{\mathrm{iso}}(\mathrm{H})=1.2 U_{\mathrm{eq}}(\mathrm{C}, \mathrm{N})$.

Figure 1
Crystal structure of the title compound with atom labeling and displacement ellipsoids drawn at the $30 \%$ probability level. Symmetry code: $\mathrm{i}=-x+1,-y+2,-z+2$.

> $\Delta \rho_{\min }=-0.30$ e $\AA^{-3}$

## Special details

Experimental. Refinement of $F^{2}$ against ALL reflections. The weighted $R$-factor $w R$ and goodness of fit $S$ are based on $F^{2}$, conventional $R$-factors $R$ are based on $F$, with $F$ set to zero for negative $F^{2}$. The threshold expression of $F^{2}>\sigma\left(F^{2}\right)$ is used only for calculating $R$-factors $(\mathrm{gt})$ etc. and is not relevant to the choice of reflections for refinement. $R$-factors based on $F^{2}$ are statistically about twice as large as those based on $F$, and $R$ - factors based on ALL data will be even larger.
Geometry. All e.s.d.'s (except the e.s.d. in the dihedral angle between two l.s. planes) are estimated using the full covariance matrix. The cell e.s.d.'s are taken into account individually in the estimation of e.s.d.'s in distances, angles and torsion angles; correlations between e.s.d.'s in cell parameters are only used when they are defined by crystal symmetry. An approximate (isotropic) treatment of cell e.s.d.'s is used for estimating e.s.d.'s involving l.s. planes.
Refinement. Refinement of $F^{2}$ against ALL reflections. The weighted $R$-factor $w R$ and goodness of fit $S$ are based on $F^{2}$, conventional $R$-factors $R$ are based on $F$, with $F$ set to zero for negative $F^{2}$. The threshold expression of $F^{2}>\sigma\left(F^{2}\right)$ is used only for calculating $R$-factors $(\mathrm{gt})$ etc. and is not relevant to the choice of reflections for refinement. $R$-factors based on $F^{2}$ are statistically about twice as large as those based on $F$, and $R$ - factors based on ALL data will be even larger.
