## 1,4-Bis(pyrimidin-2-ylsulfanyl)butane

Muhammad Akbar, ${ }^{\text {a }}$ Fahim Ashraf Quereshi, ${ }^{\text {a }}$ Waqar Nasir, ${ }^{\text {a }}$ Ahmad Adnan ${ }^{\text {a }}$ and Seik Weng $\mathbf{N g}^{\text {b }}$ *

${ }^{\text {a }}$ Department of Chemistry, Government College University, 54000 Lahore, Pakistan, and ${ }^{\text {b }}$ Department of Chemistry, University of Malaya, 50603 Kuala Lumpur, Malaysia Correspondence e-mail: seikweng@um.edu.my

Received 7 October 2010; accepted 12 October 2010
Key indicators: single-crystal X-ray study; $T=293 \mathrm{~K}$; mean $\sigma(\mathrm{C}-\mathrm{C})=0.003 \AA$; $R$ factor $=0.036 ; w R$ factor $=0.115$; data-to-parameter ratio $=18.6$.

The $-\mathrm{SCH}_{2} \mathrm{CH}_{2} \mathrm{CH}_{2} \mathrm{CH}_{2} \mathrm{~S}$ - portion of the title compound, $\mathrm{C}_{12} \mathrm{H}_{14} \mathrm{~N}_{2} \mathrm{~S}_{2}$, adopts an extended zigzag conformation. The angles at the tetrahedral carbon atoms are marginally increased [113.63 (12) ${ }^{\circ}$ and $111.38(17)^{\circ}$ for $\mathrm{S}-\mathrm{C}-\mathrm{C}$ and $\mathrm{C}-\mathrm{C}-\mathrm{C}$ respectively] from the idealized tetrahedral angle. The molecule lies on an inversion center located at the midpoint of the butyl chain. In the crystal, there is a $\pi-\pi$ stacking interaction between inversion-related pyrimidine rings with mean interplanar spacing of 3.494 (2) $\AA$.

## Related literature

For the structure of a silver perchlorate adduct of the title compound see: Wang \& Zheng (2007).

## 1,4-Bis(pyrimidin-2-yIsulfanyl)butane

## Muhammad Akbar, Fahim Ashraf Quereshi, Waqar Nasir, Ahmad Adnan and Seik Weng Ng

## S1. Comment

The bis(arylthio)alkane ligands are excellent 'flexible' ligands for binding to silver(I) compounds. The title ligand (Scheme I) has been used in the synthesis of a silver perchlorate adduct; the ligand binds through its nitrogen donor sites (Wang \& Zheng, 2007). The ligand itself exists as a centrosymmetric compound (Fig. 1) with an inversion center located at the mid-point of the butyl chain. The $-\mathrm{SCH}_{2} \mathrm{CH}_{2} \mathrm{CH}_{2} \mathrm{CH}_{2} \mathrm{~S}$ - portion of the molecule of $\mathrm{C}_{12} \mathrm{H}_{14} \mathrm{~N}_{2} \mathrm{~S}_{2}$ adopts an extended zigzag conformation, and the angles at the tetrahedral C atoms are marginally increased from the idealized $109.5^{\circ}$
(113.62 (12) $)^{\circ}$ and $111.38(17)^{\circ}$ for $\mathrm{S}-\mathrm{C}-\mathrm{C}$ and $\mathrm{C}-\mathrm{C}-\mathrm{C}$ respectively).

## S2. Experimental

To the ethanol mixture $(50 \mathrm{ml})$ of 2-mercaptopyrimidine $(2 \mathrm{~g}, 17.8 \mathrm{mmol})$ and sodium bicarbonate $(1.8 \mathrm{~g}, 21.4 \mathrm{mmol})$ was added 1,4-dichlorobutane ( $1.13 \mathrm{~g}, 8.92 \mathrm{mmol}$ ). The mixture was heated for 6 h and the progress of the reaction was monitored by TLC (chloroform: ethyl acetate 9:1). The mixture was filtered and the solvent was allowed to evaporate. The colorless crystals that were isolated were collected and washed with hexane; yield $82 \%$.

## S3. Refinement

Carbon-bound H -atoms were placed in calculated positions ( $\mathrm{C}-\mathrm{H} 0.93$ to $0.97 \AA$ ) and were included in the refinement in the riding model approximation, with $U(\mathrm{H})$ set to $1.2 U(\mathrm{C})$.

Figure 1
Thermal ellipsoid plot (Barbour, 2001) of $\mathrm{C}_{12} \mathrm{H}_{14} \mathrm{~N}_{2} \mathrm{~S}_{2}$ at the $50 \%$ probability level; hydrogen atoms are drawn as spheres of arbitrary radius. The molecule lies about a center-of-inversion.
