Received 22 March 2011; accepted 1 April 2011

Key indicators: single-crystal X-ray study;  $T = 298\text{ K}$ ; mean  $\sigma(\text{C}-\text{C}) = 0.006\text{ \AA}$ ;  $R$  factor = 0.068;  $wR$  factor = 0.224; data-to-parameter ratio = 13.3.

The title compound,  $C_{28}H_{28}N_2O_4$ , crystallizes in a zwitterionic form with deprotonated naphthol hydroxy groups and protonated imine N atoms. The asymmetric unit contains one half-molecule located on a twofold rotation axis. Intramolecular N—H···O hydrogen bonds occur and the two bicyclic ring systems form a dihedral angle of  $64.2(1)^\circ$ . In the crystal, weak intermolecular C—H···O hydrogen bonds link the molecules into layers parallel to the  $bc$  plane.

### S1. Comment

Schiff bases have various applications in coordination chemistry (Osowle, 2008). Herewith we present the title compound (I), which is a new crowned Schiff base.

In (I) (Fig. 1), all bond lengths and angles are usual and comparable with those observed in the related compounds (Etemadi *et al.*, 2004; Liu *et al.*, 2010; Farag *et al.*, 2010, 2011). Each molecule is situated on a twofold rotational axis. Intramolecular N—H···O hydrogen bonds (Table 1) influence the molecular conformation - two bicycles form a dihedral angle of 64.2 (1) $^{\circ}$ . In the crystal structure, weak intermolecular C—H···O hydrogen bonds (Table 1) link molecules into layers parallel to *bc* plane.

### S2. Experimental

The title compound was synthesized by adding drop-wise a solution of 3,6-dioxa-1,8-diaminoctane (1.48 g, 10 mmol) in absolute methanol (10 mL) to a methanol solution (20 mL) of 2-hydroxy-1-naphthaldehyde (3.4438 g, 20 mmol) under stirring at room temperature. The resultant reaction mixture was then refluxed for 5 h, cooled and concentrated under reduced pressure, and then the residue was retained at -268 K for overnight. The bright yellow crystal which suitable for X-ray analysis was formed, filtered and dried under reduced pressure. Yield: 82%. Analysis found: C 73.07, H 6.06, N 6.51%; calculated for C<sub>28</sub>H<sub>28</sub>N<sub>2</sub>O<sub>4</sub> (Mr=456.54): C 73.66, H 6.18, N 6.14%.

### S3. Refinement

C-bound H atoms were geometrically positioned [C—H 0.93–0.97 Å]. Atom H1A was located on a difference map, but placed in idealized position [N—H 0.86 Å]. All H atoms were refined as riding atoms, with *U*<sub>iso</sub>(H) = 1.2–1.5 *U*<sub>iso</sub> of the parent atom.

Figure 1

The molecular structure of (I) showing the atomic labels and 30% probability displacement ellipsoids. Symmetry code: (A)  $-x + 1/2, -y + 1, z$ .
