Received 11 April 2011; accepted 18 April 2011
Key indicators: single-crystal X-ray study; $T=150 \mathrm{~K}$; mean $\sigma(\mathrm{C}-\mathrm{C})=0.010 \AA$; $R$ factor $=0.034 ; w R$ factor $=0.076$; data-to-parameter ratio $=13.4$.

In the crystal structure of the title compound, $\left[\mathrm{Hf}\left(\mathrm{C}_{5} \mathrm{H}_{5}\right)_{3}\right]$, three cyclopentadienyl ligands surround the $\mathrm{Hf}^{\mathrm{III}}$ atom in a trigonal-planar geometry. The molecule lies on a sixfold inversion axis.

## Related literature

Isotypic $\left(\eta^{5}-\mathrm{C}_{5} \mathrm{H}_{5}\right)_{3} \mathrm{Zr}$ was described by Lukens \& Andersen (1995). For $\left(\eta^{5}-\mathrm{C}_{5} \mathrm{H}_{5}\right)_{3} M, M=\mathrm{Y}$ : see Adam et al. (1991); $M=$ Nd: see Eggers et al. (1992a); $M=$ Sm: see Wong et al. (1969), Bel'skii et al. (1991), Eggers et al. (1992b); $M=\mathrm{Er}$, Tm: see Eggers et al. (1986); $M=\mathrm{Yb}$ : see Eggers et al. (1987); $M=\mathrm{Ce}$, Dy, Ho: see Baisch et al. (2006). Unit-cell dimensions of ( $\eta^{5}$ $\left.\mathrm{C}_{5} \mathrm{H}_{5}\right)_{3} M(M=\mathrm{Pr}, \mathrm{Pm}, \mathrm{Sm}, \mathrm{Gd}, \mathrm{Tb}, \mathrm{Tm}, \mathrm{Cm}, \mathrm{Bk}, \mathrm{Cf})$ were determined by Laubereau \& Burns (1970a,b).

## Vladimir V. Burlakov, Perdita Arndt, Anke Spannenberg and Uwe Rosenthal

## S1. Comment

In the reaction of $\left(\eta^{5}-\mathrm{C}_{5} \mathrm{H}_{5}\right)_{2} \mathrm{Hf}\left[-\mathrm{C}\left(\mathrm{SiMe}_{3}\right)=\mathrm{C}\left(\mathrm{C} \equiv \mathrm{CSiMe}_{3}\right)-\mathrm{C}\left(\mathrm{SiMe}_{3}\right)=\mathrm{C}\left(\mathrm{C} \equiv \mathrm{CSiMe}_{3}\right)-\right]$ with $(i-\mathrm{Bu})_{2} \mathrm{AlH}$ single crystals of the title compound as lone product in very low yield were isolated. Isostructural compounds are known for $M$ $=\mathrm{Zr}$ (Lukens et al., 1995), $M=\mathrm{Y}$ (Adam et al., 1991), $M=\mathrm{Nd}$ (Eggers et al., 1992a), $M=\mathrm{Sm}$ (Wong et al., 1969; Bel'skii et al., 1991; Eggers et al., 1992b), $M=\mathrm{Er}$, Tm (Eggers et al., 1986), $M=\mathrm{Yb}$ (Eggers et al., 1987), $M=\mathrm{Ce}$, Dy, Ho (Baisch et al., 2006). $\left(\eta^{5}-\mathrm{C}_{5} \mathrm{H}_{5}\right)_{3} \mathrm{Hf}$ crystallizes in the hexagonal space group $\mathrm{P}_{3} / m$ with unit-cell dimensions isomorphous with the Zr analogue (Lukens et al., 1995). The $\mathrm{Hf}(\mathrm{III})$ center is surrounded by three $\eta^{5}$-coordinated cyclopentadienyl ligands in a trigonal planar geometry. The Hf—C distances are with 2.547 (6) and 2.575 (6) $\AA$ in the expected range.

## S2. Experimental

An amount of $0.460 \mathrm{~g}(0.66 \mathrm{mmol})$ of the five membered metallacycle $\left(\eta^{5}-\mathrm{C}_{5} \mathrm{H}_{5}\right)_{2} \mathrm{Hf}\left[-\mathrm{C}\left(\mathrm{SiMe}_{3}\right)=\mathrm{C}\left(\mathrm{C} \equiv \mathrm{CSiMe}_{3}\right)-\right.$ $\left.\mathrm{C}\left(\mathrm{SiMe}_{3}\right)=\mathrm{C}\left(\mathrm{C} \equiv \mathrm{CSiMe}_{3}\right)-\right]$ was dissolved in 20 ml of $n$-hexane under Ar , and $2.6 \mathrm{ml}(2.6 \mathrm{mmol})$ of a 1.0 M solution of $(i-\mathrm{Bu})_{2} \mathrm{AlH}$ in cyclohexane was added to the obtained yellow solution. After one day the obtained red-brown solution was filtered and allowed to stand in argon atmosphere at $-40^{\circ} \mathrm{C}$. After 6 month the light-yellow crystals had formed which were separated from the mother liquor by decanting, washed with cooled $n$-hexane, and dried in vacuum to give ( $\eta^{5}$ $\left.\mathrm{C}_{5} \mathrm{H}_{5}\right)_{3} \mathrm{Hf}$. Yield 9.3\% (23 mg). M.p. $261-263{ }^{\circ} \mathrm{C}$ (dec. under Ar). MS (70 eV, m/z): $375\left(M^{+}\right), 310\left(M^{+}-\mathrm{C}_{5} \mathrm{H}_{5}\right)$.

## S3. Refinement

H atoms were placed in idealized positions with $\mathrm{d}(\mathrm{C}-\mathrm{H})=0.95 \AA$ and refined using a riding model with $U_{\text {iso }}(\mathrm{H})$ fixed at $1.2 U_{\mathrm{eq}}(\mathrm{C})$.
A numerical absorption correction was performed. Hence the largest peak of $0.95(1.57 \AA$ from Hf1) and the deepest hole of -3.40 e $\AA^{-3}$ ( $0.98 \AA$ from Hf1) in the final difference Fourier map were obtained.

Figure 1
The molecular structure of the title compound showing the atom-labelling scheme. Displacement ellipsoids are drawn at the $50 \%$ probability level.

$h=-9 \rightarrow 9$

## Refinement

Refinement on $F^{2}$
Least-squares matrix: full
$R\left[F^{2}>2 \sigma\left(F^{2}\right)\right]=0.034$
$w R\left(F^{2}\right)=0.076$
$S=1.22$
362 reflections
27 parameters
0 restraints
Primary atom site location: structure-invariant direct methods
$k=-9 \rightarrow 9$
$l=-12 \rightarrow 12$

Secondary atom site location: difference Fourier map
Hydrogen site location: inferred from neighbouring sites
H -atom parameters constrained
$w=1 /\left[\sigma^{2}\left(F_{0}^{2}\right)+(0.0163 P)^{2}+5.6136 P\right]$
where $P=\left(F_{0}^{2}+2 F_{\mathrm{c}}^{2}\right) / 3$
$(\Delta / \sigma)_{\max }<0.001$
$\Delta \rho_{\text {max }}=0.95$ e $\AA^{-3}$
$\Delta \rho_{\text {min }}=-3.40$ e $\AA^{-3}$

## Special details

Geometry. All e.s.d.'s (except the e.s.d. in the dihedral angle between two l.s. planes) are estimated using the full covariance matrix. The cell e.s.d.'s are taken into account individually in the estimation of e.s.d.'s in distances, angles and torsion angles; correlations between e.s.d.'s in cell parameters are only used when they are defined by crystal symmetry. An approximate (isotropic) treatment of cell e.s.d.'s is used for estimating e.s.d.'s involving l.s. planes.
Refinement. Refinement of $F^{2}$ against ALL reflections. The weighted $R$-factor $w R$ and goodness of fit $S$ are based on $F^{2}$, conventional $R$-factors $R$ are based on $F$, with $F$ set to zero for negative $F^{2}$. The threshold expression of $F^{2}>\sigma\left(F^{2}\right)$ is used only for calculating $R$-factors (gt) etc. and is not relevant to the choice of reflections for refinement. $R$-factors based on $F^{2}$ are statistically about twice as large as those based on $F$, and $R$ - factors based on ALL data will be even larger.
