Received 17 March 2011; accepted 31 March 2011

Key indicators: single-crystal X-ray study; $T = 140$ K; mean $\sigma(\text{C}-\text{C}) = 0.002$ Å; R factor = 0.034; wR factor = 0.053; data-to-parameter ratio = 24.8.

The title compound, $\text{C}_7\text{H}_9\text{N}_3\text{S}_2$, crystallizes with two unique molecules in the unit cell, both present as thiosemicarbazide tautomers. The molecules differ principally in the dihedral angles between the thiophene ring planes and the planes through the non-H atoms of the hydrazinecarbothioamide units, *viz.* 9.80 (8)° for one molecule and 19.37 (7)° for the other. The hydrazinecarbothioamide units are reasonably planar, with r.m.s. deviations of 0.001 Å for each of the molecules. In the crystal, $\text{N}-\text{H}\cdots\text{S}$ hydrogen bonds link like molecules into $R_2^2(8)$ inversion dimers. A three-dimensional network structure is generated by additional $\text{N}-\text{H}\cdots\text{S}$ hydrogen bonds and weak $\text{C}-\text{H}\cdots\text{S}$ contacts between the unique molecules.

1-(Thiophen-2-yl)ethanone thiosemicarbazone

Papa Aly Gaye, Adama Sy, Aminata Diassé Sarr, Mohamed Gaye and Celine Besnard

S1. Comment

NMR analysis of the title compound, (C₇H₉N₃S₂)₂, (see experimental) shows that two forms are present in solution with the thiosemicarbazide moiety being partially transformed into the thioenolsemicarbazide. The X-ray structure determination reveals that the compound crystallizes in the triclinic space group P-1 with two molecules in the asymmetric unit, both of which are present as the thiosemicarbazide tautomer. The molecular geometry is illustrated in Fig. 1. The C—S bond lengths 1.6921 (15) Å and 1.6884 (15) Å confirm the double bond character and are comparable to those observed for 1-(biphenyl-4-carbonyl)-3-*p*-tolyl-thiourea [1.647 (3) Å for C—S, 1.217 (3) and 1.224 (3) Å] (Avsar *et al.*, 2003). The C—N bond lengths are in the range [1.2920 (17) - 1.4122 (16) Å] which are shorter than normal single C—N bond lengths (Arslan *et al.*, 2004).

Both unique molecules form inversion related dimers with R₂²(8) graph-set motifs (Bernstein *et al.*, 1995) through N1—H11...S3 and N24—H241...S23 hydrogen bonds. Unique molecules are further linked by N21—H212...S3 bonds supported by a weak C7—H72...S3 contacts which generate additional centrosymmetric R₂²(11) motifs and a three dimensional network (Fig. 2).

S2. Experimental

2-Acetyl thiophene (1,2618 g, 10 mmol) was reacted with thiosemicarbazide (0.9114 g, 10 mmol) in CH₃OH (50 ml) solution, to give the corresponding compound after one hour under reflux. After cooling to room temperature, a yellow solid was isolated and washed twice with diethyl ether. Yield: 79.5%. m.p. 142–146 °C. Anal. Calc. for C₇H₉N₃S₂ (%): C, 42.19; H, 4.55; N, 21.08. Found: C, 42.22; H, 4.53; N, 21.01. Selected IR data (cm⁻¹, KBr pellet): 3450, 3250 (ν NH), 1630 (ν C=N), 1160 (ν C=S). ¹H NMR (200 MHz, CD₆Cl, δ, p.p.m.): 2.32 (s, 3H, —CH₃); 7.42 (s, 2H, —NH₂); 8.32 (s, 1H, —NH); 7.07–7.58 (m, 3H, C₄H₃S); 10.36 (s, 1H, SH). ¹³C NMR (200 MHz, CD₃Cl, δ, p.p.m.): 14.01 (—CH₃); 68.09 (O—CH~2~); 70.12 (O—CH~2~); 127.12–143.152 (C₄H₃S); 145.30 (C=N); 178.02 (C=S). A CH₃Cl solution of the title compound was mixed with ethanol (1/1). After several days, colorless block-shaped single crystals suitable for X-ray crystallographic analysis were obtained.

S3. Refinement

The H atoms were all located in a difference map, but those attached to carbon atoms were repositioned geometrically. The H atoms were initially refined with soft restraints on the bond lengths and angles to regularize their geometry (C—H in the range 0.93–0.98, N—H in the range 0.86–0.89 N—H to 0.86 O—H = 0.82 Å) and *U*_{iso}(H) (in the range 1.2–1.5 times *U*_{eq} of the parent atom), after which the positions were refined with riding constraints.

Figure 1

The asymmetric unit of the title compound, showing the atom-numbering scheme. Displacement ellipsoids are drawn at the 50% probability level.

Figure 2

Crystal packing of 1 viewed down the *b* axis. Hydrogen bonds are drawn as dashed lines.
