## Methyl 6-chloronicotinate

Yong Xu, ${ }^{\text {a }}$ Ling-Ling Yang, ${ }^{\text {b }}$ Sheng-Yong Yang ${ }^{\text {a }}$ and Jie Liu ${ }^{\text {a* }}$

${ }^{\text {a }}$ State Key Laboratory of Biotherapy and Cancer Center, West China Hospital, West China Medical School, Sichuan University, Chengdu 610041, People's Republic of China, and ${ }^{\mathbf{b}}$ Department of Pharmaceutical and Bioengineering, School of Chemical Engineering, Sichuan University, Chengdu 610065, People's Republic of China Correspondence e-mail: liujie2011@scu.edu.cn

Received 1 December 2011; accepted 12 December 2011
Key indicators: single-crystal X-ray study; $T=293 \mathrm{~K}$; mean $\sigma(\mathrm{C}-\mathrm{C})=0.004 \AA$; $R$ factor $=0.055 ; w R$ factor $=0.119$; data-to-parameter ratio $=15.1$.

The molecule of the title compound, $\mathrm{C}_{7} \mathrm{H}_{6} \mathrm{ClNO}_{2}$, is almost planar, with a dihedral angle of $3.34(14)^{\circ}$ between the COOMe group and the aromatic ring. In the crystal, the molecules are arranged into (112) layers by $\mathrm{C}-\mathrm{H} \cdots \mathrm{N}$ hydrogen bonds and there are $\pi-\pi$ stacking interactions between the aromatic rings in adjacent layers [centroidcentroid distance 3.8721 (4) Å]

## S1. Comment

The title compound is one of the key intermediates in our synthetic investigations of GPCR(G-protein coupled receptor) modulators. We have synthesized the title compound and here we report its crystal structure.
As shown in Fig.1, the molecule is nearly planar, the dihedral angle formed by the pyridine ring and the ester group (C6/C7/O1/O2) being $3.34(14)^{\circ}$. Weak $\mathrm{C}-\mathrm{H} \cdots \mathrm{O}$ and $\mathrm{C}-\mathrm{H} \cdots \mathrm{N}$ hydrogen bonds are present in the crystal structure linking molecules into (1-12) layers. There are also $\pi-\pi$ stacking interactions between the aromatic rings in adjacent layers [centroid-centroid distance 3.8721 (4) $\AA$ ].

## S2. Experimental

The title compound was prepared by the following method. A mixture of 6-chloronicotinic acid ( $5.67 \mathrm{~g}, 0.036 \mathrm{~mol}$ ), dimethyl carbonate $(10.95 \mathrm{~mL}, 0.131 \mathrm{~mol})$ and concentrated $\mathrm{H}_{2} \mathrm{SO}_{4}(2.72 \mathrm{~mL}, 0.049 \mathrm{~mol})$ was refluxed for 17 h . Then aqueous $\mathrm{NaHCO}_{3}$ solution ( 8.6 g in 86 mL water) was added, extracted with dichloromethane ( 150 mL ), dried $\left(\mathrm{Na}_{2} \mathrm{SO}_{4}\right)$, filtered and evaporated under reduced pressure to afford the title compound. Crystals suitable for X-ray analysis were obtained by slow evaporation from dichloromethane solution at room temperature over a period of one week.

## S3. Refinement

H atoms were positioned geometrically and refined using a riding model approximation, with $\mathrm{d}(\mathrm{C}-\mathrm{H})=0.93-0.96 \AA$, and $U_{\text {iso }}(\mathrm{H})=1.2 U_{\text {eq }}(\mathrm{C})$ or $1.5 U_{\text {eq }}($ methyl C).

> $(\Delta / \sigma)_{\max }<0.001$
> $\Delta \rho_{\max }=0.23$ e $\AA^{-3}$
> $\Delta \rho_{\min }=-0.18$ e $\AA^{-3}$

## Special details

Geometry. All e.s.d.'s (except the e.s.d. in the dihedral angle between two l.s. planes) are estimated using the full covariance matrix. The cell e.s.d.'s are taken into account individually in the estimation of e.s.d.'s in distances, angles and torsion angles; correlations between e.s.d.'s in cell parameters are only used when they are defined by crystal symmetry. An approximate (isotropic) treatment of cell e.s.d.'s is used for estimating e.s.d.'s involving l.s. planes.
Refinement. Refinement of $F^{2}$ against ALL reflections. The weighted $R$-factor $w R$ and goodness of fit $S$ are based on $F^{2}$, conventional $R$-factors $R$ are based on $F$, with $F$ set to zero for negative $F^{2}$. The threshold expression of $F^{2}>\sigma\left(F^{2}\right)$ is used only for calculating $R$-factors(gt) etc. and is not relevant to the choice of reflections for refinement. $R$-factors based on $F^{2}$ are statistically about twice as large as those based on $F$, and $R$ - factors based on ALL data will be even larger.
