Fig. S1B Sequence alignment between PatAG-DUF_{sp.} and homologues from related cyanobactin biosynthetic pathways. Residues involved in Zn²⁺ coordination (as identified in the PatG-DUF_{sp.} structure) are highlighted with red triangles.

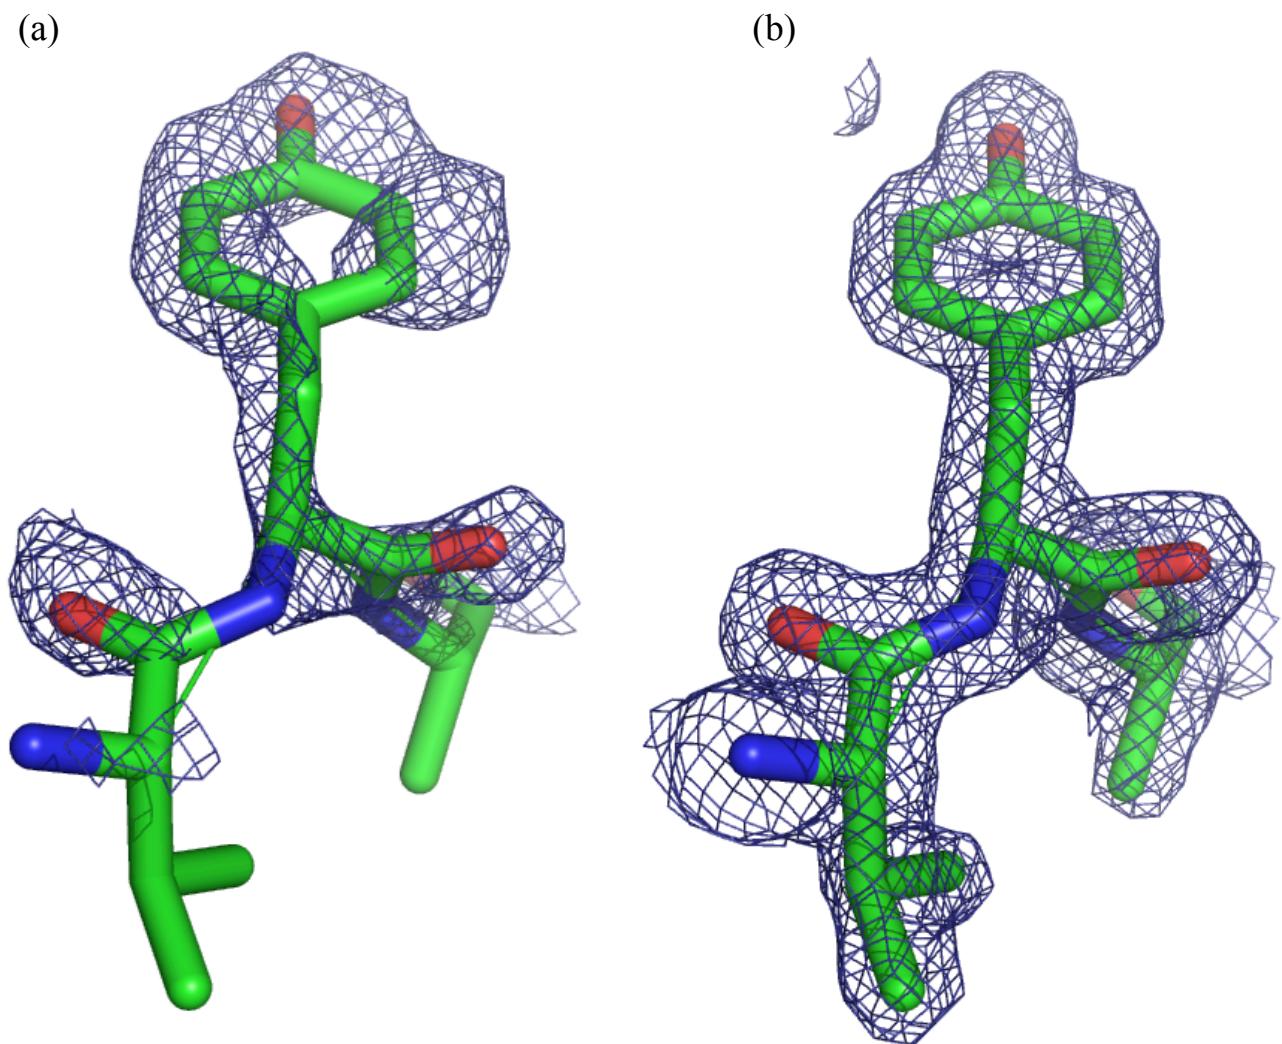

Fig. S2 Final refined of PatG-DUF_{sp.} Y925 model with (a) Electron density map contoured at 1.2 σ from PHENIX with experimental phases calculated from anomalous scattering atoms. (b) Electron density map calculated with phases after density PHENIX modification of experimental phases.

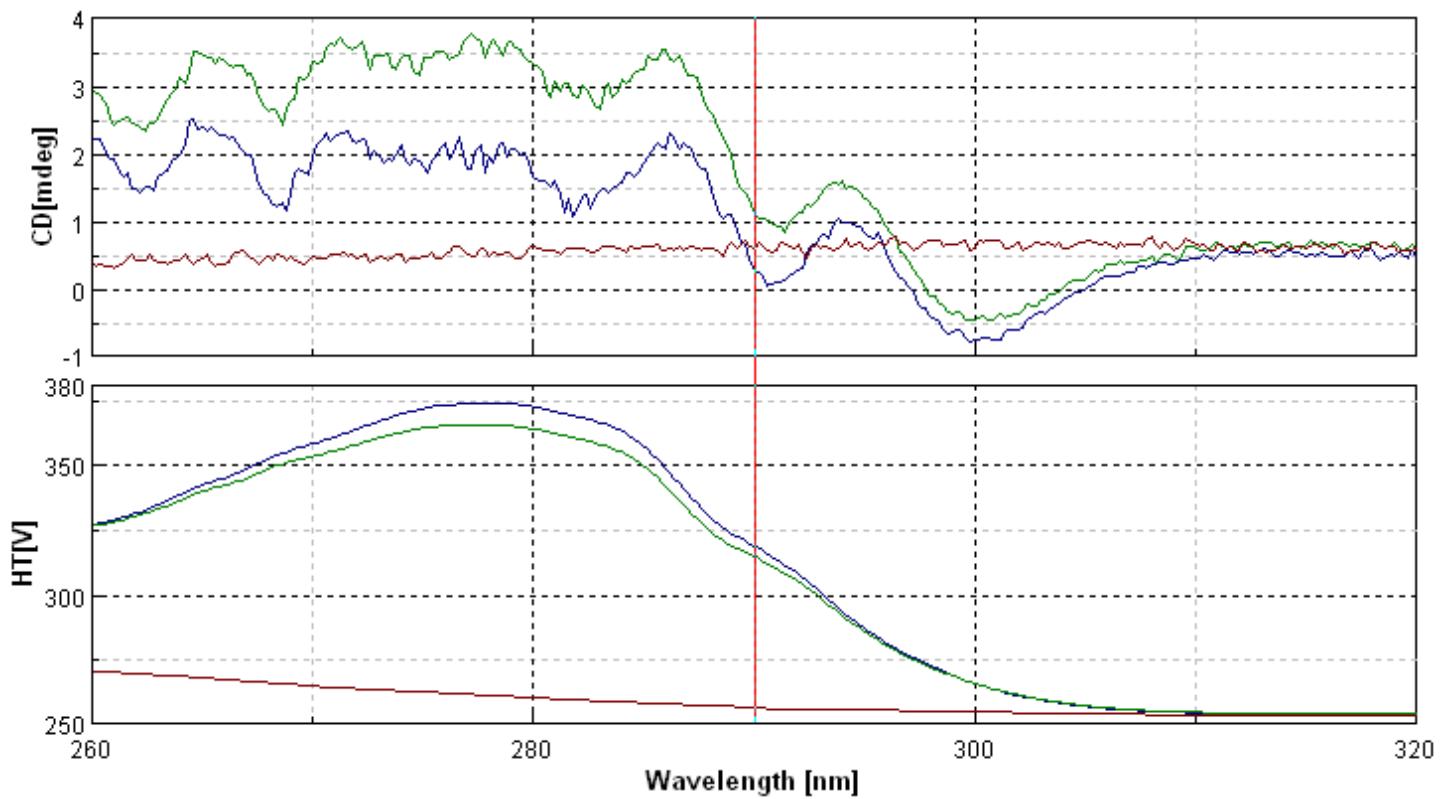

Fig. S3 Near UV CD-spectra of PatG-DUF_{sp.} (green) and PatG-DUF_{di.} (blue). A blank containing only buffer is shown in red. The CD-spectra overlay well suggestion the sequence variations (three point mutations) do not alter the tertiary structure of the domain.

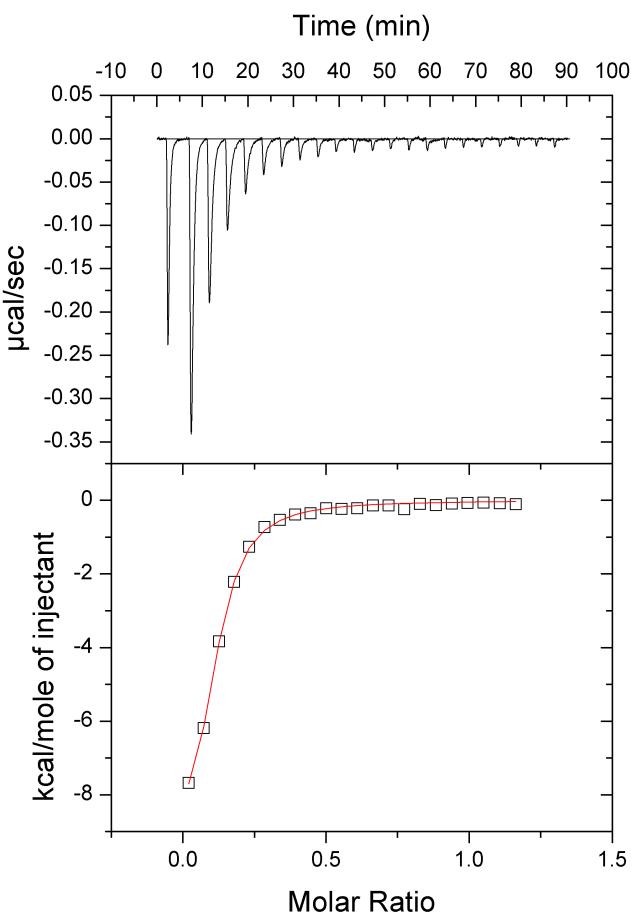

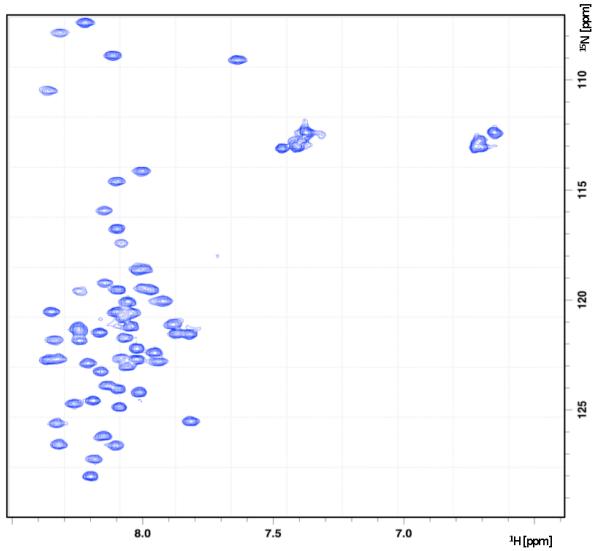

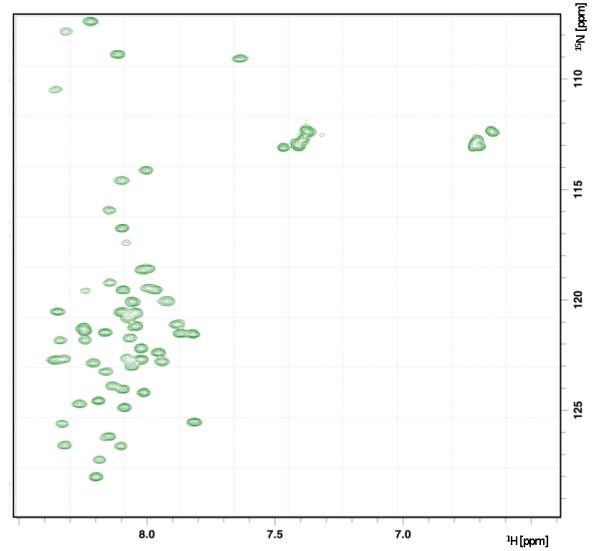

Fig. S4 ITC data of PatE' titrated into PatG-DUF_{di} solution. The top panel shows raw data representing the heat evolved in response to injections, the bottom panel shows the integrated heats of injections (□) and the best fit (—) to the one-site model (origin).
