In February 1982 Professor E. F. Bertaut retired as Director of the Laboratoire de Cristallographie, CNRS, Grenoble. Professor Bertaut was a member of the IUCr Executive Committee between 1975 and 1981. He was also involved in the establishment of the Commission on Charge, Spin and Momentum Densities, being its first Chairman between 1975 and 1978, and has worked for many years with other members of the Commission on International Tables in the preparation of a new volume of this publication on direct space.

Sir Charles Frank, formerly Henry Overton Wills Professor of Physics at the University of Bristol, has been awarded the Guthrie Medal and Prize of the British Institute of Physics for his extensive contributions to the physics of solids.

The Charles Vernon Boys Prize of the British Institute of Physics for 1982 has been awarded to Dr B. J. Isherwood of GEC's Hirst Research Centre for his development and use of X-ray topography and multiple diffraction in the diagnosis of surface behaviour and crystalline quality.

International Union of Crystallography

Commission on Journals

Authors are reminded that chemical formulae and nomenclature in papers submitted to Acta Crystallographica and Journal of Applied Crystallography should conform to the rules of nomenclature established by the International Union of Pure and Applied Chemistry (IUPAC), the International Union of Biochemistry (IUB) and other appropriate bodies. As far as possible the crystallographic nomenclature should correspond to the systematic name. A structural formula should generally be given for all organic and organometallic compounds.

All papers in Acta Crystallographica, Section B, reporting crystal structure determinations and all Crystal Data in Journal of Applied Crystallography should include the approved name(s) of the compound(s) in the title of the paper or in a footnote to the title. Any paper in Acta Crystallographica, Section A, or in Journal of Applied Crystallography dealing with the crystal physics or the properties of a particular material should also include the approved name of the compound concerned. It is desirable that any accepted trivial name, trade mark, recommended International Non-proprietary Name (INN), United States Adopted Name (USAN) or British Pharmacopoeia Approved Name be retained, but the corresponding systematic (IUPAC) name should be provided. For a list of available nomenclature sources see J. Appl. Cryst. (1979). 12, 640. [Approved Names 1977 – a list of approved names for pharmaceutical compounds with their corresponding systematic (IUPAC) names, published for the British Pharmacopoeia Commission – is available from Her Majesty’s Stationery Office.]

Assistance in the naming of compounds in accordance with IUPAC and IUPAC-IUB rules may be obtained from Dr K. L. Loening, Director of Nomenclature, Chemical Abstracts Service, PO Box 3012, Columbus, Ohio 43210, USA; from Mr E. W. Godly, Chemical Nomenclature Advisory Service (CNAS), Laboratory of the Government Chemist, Department of Industry, Room A-510, Cornwall House, Stamford Street, London SE1 9NQ, England; and in the particular naming of inorganic compounds from Professor Y. Jeannin, Laboratoire de Chimie des Mêtaux de Transition, Université Pierre et Marie Curie, 4 place Jussieu, 75230 Paris CEDEX 05, France. Enquiries may also be addressed to Dr J. E. Derry, International Union of Crystallography, 5 Abbey Square, Chester CH1 2HU, England. If advice on chemical nomenclature is sought from any of the above advisory sources authors are requested, when submitting a manuscript to the Union’s journals, to indicate the source consulted.

Commission on Journals

Decisions taken at meeting in Ottawa, August 1981

The attention of authors planning to submit papers to Acta Crystallographica or Journal of Applied Crystallography is drawn to the following decisions taken by the Commission on Journals at meetings held in Warsaw, 14–16 August 1981. These and other revisions in editorial policy since 1978 will be published in a new version of Notes for Authors, which is presently in preparation.

International Symbols for Units

The Commission has recognized that, although multiples of 10² are the preferred prefixes in the SI System of Units, the centimetre is not prohibited by the SI system and therefore density and absorption coefficients may be given in units of g cm⁻³ and cm⁻¹ respectively, if authors so wish. In all other cases, however, authors are asked to use the recommended prefixes of decimal multiples and submultiples of the SI units rather than using "× 10⁻⁹".

Structural papers

Estimated standard deviations for B₁₁:
The requirement of estimated standard deviations on equivalent values of the Debye-Waller factor was reviewed. The Commission agreed that the significance of such estimated standard deviations is ambiguous. In the case of high anisotropy, the estimated standard deviation is necessarily large although the individual anisotropic parameters may be well determined. In future, the presence of unusual anisotropy should be referred to in the text (including the maximum and minimum amplitudes and any nonpositive-definite coefficients found), or in the table of B₁₁ (by use of an asterisk), or illustrated by a plot of the atomic vibrational ellipsoids.

Calculated hydrogen-atom coordinates:
Calculated hydrogen-atom coordinates will be published in future only at the Co-editor’s discretion and if they are necessary to the understanding of the paper. They will otherwise be deposited.

Graphical chemical formulae:
A graphical structural formula should always be given in the report of a structure determination of an organic or organometallic compound. The figure showing the atomic positions is not adequate for this purpose. However, a plot of the atomic vibrational ellipsoids can be used to illustrate atomic positions. Authors should ensure that such plots are of good contrast and quality. The numbering of atoms should be consistent throughout a paper and, as far as possible, correspond to the systematic name [J. Appl. Cryst. (1982). 15, 250].

Least-squares planes:
Least-squares planes and the deviations from them will only be published if they are referred to in the text of the paper and are significant in the consideration of the structure. They will otherwise be deposited.

Absorption correction:
In a structural paper the absorption correction, if any, should always be described and the maximum and minimum corrections stated.

Melting point:
In a structural paper the melting point of a compound should always be given if it is known.

Stereoclines:
The requirement on stereoclines is one per structure unless the Co-editor and referees feel that more are necessary for the understanding of the structure described in the paper. These stereoclines must fit into a single
