Errors in the article by Jill Trehella [*J. Appl. Cryst.* (2021), **54**, 1029–1033] are corrected.

Table 1 in the article by Trehella (2021) contains a number of errors. The SAS2009 conference proceedings, including 52 invited and contributed papers, were published in the *Journal of Physics – Conference Series*, Vol. 247, 2010. The correct numbers of papers and pages for SAS2002 should be 106 papers, 495 pages; for SAS-99 should be 105 papers, 445 pages; and for SAS-96 should be 63 papers, 327 pages.

In regard to the origins of canSAS, it was originally an initiative of staff at the Institut Laue–Langevin, European Synchrotron Radiation Facility (ESRF) and ESRF Collaborative Research Groups that came to be taken up by the broader SAS community with support at the SAS conferences.

Acknowledgements

Thanks to Aldo Craievich and Wim Bras for pointing out these errors.
